I. INTRODUCTION

The Montana Department of Commerce is pleased to provide the Updated Consolidated Plan for Fiscal Year 1996. This plan is designed to meet the requirements set forth by the Department of Housing and Urban Development (HUD) and various housing and community development acts passed by the U.S. Congress. This document will be used by federal agencies to make appropriation decisions regarding resources made available to Montana for addressing issues related to affordable housing, homelessness, and community development needs.

The plan consolidates the planning, application, reporting, and citizen participation components of three formula programs that receive annual funding from HUD. Individual program applications, documentation and certifications for the Community Development Block Grant (CDBG), Home Investment Partnerships (HOME), and the Emergency Shelter Grant (ESG) formula programs that are applicable to Montana are addressed. These programs will be implemented and operated for the uniform time period beginning April 1 and ending March 31 of each year.

The update process promotes a unifying opportunity for units of local government, the State, and others, to continue developing cohesive, attractive, safe, and economically vibrant communities. The updating process encouraged all citizens, especially low-income residents, to take a part in shaping their own future.

In 1995, Montana elected to issue the Consolidated Plan for Fiscal Years 1995-1999 as a two volume set. Volume I pertained to the five-year strategy, identifying issues and needs to be addressed over the next several years. Volume II presented the annual plan. The Consolidated Plan for FY 96 has been created to combine the two volumes into a condensed, informative record. Specific data relating to *Inventory of Facilities* and *Resources Available* have been provided in appendix format to ease location of specific facility as well as distributing the entire list. This document may be used to facilitate individuals, communities, and organizations in meeting the three basic goals of the Community Development Block Grant (CDBG), Home Investment Partnerships (HOME), and the Emergency Shelter Grant (ESG) programs. These goals are to: secure decent housing, provide a suitable living environment and expand economic opportunities.

Providing decent housing may involve assisting homeless people to obtain appropriate housing, retaining the affordable housing stock, increasing the availability of permanent affordable housing for low-income households without discrimination, and increasing supportive housing to assist persons with special needs. Providing a suitable living environment means improving the safety and livability of neighborhoods, including the provision of adequate public facilities; strengthening housing opportunities and revitalizing neighborhoods; restoring and preserving natural and physical features with historic, architectural, and aesthetic value; and conserving energy resources. To expand economic opportunities, the comprehensive approach emphasizes

creation of accessible jobs, providing access to credit for community development, and assisting low-income persons to achieve self-sufficiency in federally assisted and public housing.

The Consolidated Plan for FY 96 will provide details to citizens, public agencies, and other interested parties on the amount of assistance Montana expects to receive, range of activities that may be undertaken, and the general program activities that may be planned in addressing the priority needs outlined in the plan. The plan also presents details on analysis and evaluation of priority needs statewide, as well as presenting policies related to the provision of affordable housing and community development. The plan also offers certifications stating that statutory guidelines have been followed, such as efforts to minimize the displacement of people and to assist persons who have been displaced.

A. DEVELOPMENT PROCESS FOR UPDATING THE CONSOLIDATED PLAN

Updating the strategy for housing and community development in Montana continued throughout the past fiscal year, spanning a variety of settings. Through this process, the State has attempted to enhance the prospects for delivering such assistance to the people of Montana, and to improve the formation of policies and programs that support the availability and delivery of affordable housing, facilities and services for the homeless, and other non-housing community development needs, such as infrastructure and economic development. The development process consists of several distinct steps. These include:

1. Interagency cooperation and coordination;
2. Consultation with concerned citizens and organizations;
3. Advisory and policy formation functions;
4. Public awareness of the citizen involvement process; and
5. Delivery of program services.

1. INTERAGENCY COOPERATION AND COORDINATION

In November of 1994, the State Housing Task Force recommended centralization of housing programs within state government to increase coordination and to assist in the development of a cohesive state housing policy to guide the operation of all housing programs in Montana. The Department of Commerce formed a Housing Division within the Department, which includes the Board of Housing and its programs, the Section 8 program and the Home Investment Partnerships program (HOME).

MDOC continues to have other institutional concerns, such as the integration and coordination of its programs with other means to provide community assistance. Many banks, savings and loans, and other financial organizations involved in housing are interested in taking advantage of federally assisted housing improvement programs in order to meet the requirements of the Federal Community Reinvestment Act. (CRA). The Census and Economic Information Center, within MDOC, has been responding to many requests throughout the year for information

pertinent to the CRA program, and for planning information to aid in the development of housing proposals. The CEIC provides information to financial institutions regarding applicable credit that is geocoded to census tracts or block numbering areas upon request. Some financial institutions have implemented programs in response to the CRA, through cooperation of MDOC.

MDOC also has been communicating and coordinating activities with other agencies through the entire year. This assists in the identification of areas in which further communication and cooperation may be needed and helps to identify gaps in the institutional provision of services. Activities have included application workshops for HOME and CDBG funding, information and data dissemination regarding the CRA, advice to nonprofit agencies and prospective nonprofit entities on how to become certified as a Community Housing Development Organization (CHDO), and support for other entities in their application processes for funding programs not administered by MDOC.

Staff personnel associated with the programs continue to actively participate with community and state organizations that are committed to improving the decent housing, suitable living environments and economic opportunities for Montanans in need. Some of these organizations include W₂ASACT, the Mental Health Council, Habitat for Humanity and Lead Base Paint Committee.

2. CONSULTATION WITH CONCERNED CITIZENS AND ORGANIZATIONS

As part of the development of updating the plan, a specific set of actions was taken to analyze statewide opinions from a broad base of concerned citizens and organizations. The objective was to provide an opportunity and encourage input prior to development of the update. Information and assistance received from local government, public agencies, member organizations and citizens through Montana are incorporated into this document.

In addition to assessing past surveys, several other agencies, entities, and parties were contacted and invited to provide input. Organizations and individuals were contacted and encouraged to provide valid statistics and information to aid in the update process. Following is a list of those contacted:

- Montana HRDC Director's Association
- Montana Alliance for the Mentally Ill
- Mental Health Division (Department of Corrections and Human Services)
- Mental Health Planning & Advisory Council
- National Association of Housing and Redevelopment Officials
- Water, Wastewater, Solid Waste, Action Coordination Team (W₂ASACT)
- Montana Rural Development Council
- Montana Society of Engineers
- Consulting Engineers Council
- Montana Economic Development Corporation
- Rural Economic & Community Development Services
- Economic Development Administration

Montana Low Income Coalition
 Council for Concerned Citizens
 Montana League of Cities and Towns
 Montana Association of Counties
 Montana Building Industry Association
 Indian Affairs
 Loud Thunder International, Inc.
 Governor's Office on Aging
 Montana Banker's Association
 Housing & Assistive Technical Coordinator
 Montana Lead Program

HOME and CDBG staff met with numerous citizens throughout the year on a one-to-one basis and at application workshops and presented information on the Consolidated Plan. Staff also presented information regarding the plan at conferences and conventions throughout the year. A Public Input Meeting was held on October 10 to provide public comment and input prior to the draft Update. In addition, numerous meetings were held by the Steering committee throughout the updating process. The results of all contacts that occurred throughout the year, and the information received, have been included in this draft document.

3. ADVISORY AND POLICY FORMATION FUNCTIONS

Throughout the year, MDOC has interacted with other agencies and organizations with commitment to facilitate the development of refined housing strategies. MDOC has maintained its commitment to informing others of their responsibility to participate in the CPS process and to enhancing the ability of others to promote housing in local communities. In previous years, MDOC sought and received broad-based support for a "team" approach to addressing housing needs and founded the CPS Steering Committee. Continued use of a committee provided direction and input for the draft update to the CPS.

MDOC continues to be instrumental in advising existing and potential nonprofit entities on ways to form Community Housing Development Organizations that subsequently can be certified by MDOC. Only local units of government (cities, towns, and counties) and CHDOs are eligible to apply for HOME grant funds, under the HUD-approved program description. An MDOC-certified CHDO can apply for set-aside funds under the HOME program. MDOC has certified 20 nonprofit organizations as CHDOs. These organizations are:

Action for Eastern Montana, Glendive;
 District IV Human Resources Development Council, Havre;
 District VI Human Resources Development Council, Lewistown;
 District VII Human Resources Development Council, Billings;
 District IX Human Resources Development Council, Bozeman;
 District XI Human Resources Development Council, Missoula;
 District XII Human Resources Development Council, Butte;
 Montana People's Action, Billings;
 Montana People's Action, Missoula;
 Neighborhood Housing Services, Inc., Great Falls;

Northwest Montana Human Resources, Inc., Kalispell;
 Opportunities, Inc., Great Falls;
 Ravalli Services Corp., Hamilton;
 Missoula YWCA, Missoula;
 Women's Opportunity and Resource Development (WORD), Missoula;
 Rocky Mountain Development Council, Helena;
 Habitat for Humanities for Southwest Montana;
 Supporters of Abuse Free Environment (S.A.F.E.) Inc, Hamilton;
 Building Self Worth, Inc., Butte;
 Garden City CHDO, Missoula

4. PUBLIC AWARENESS OF THE CITIZEN INVOLVEMENT PROCESS

In the process of Updating the Consolidated Plan, numerous individuals, organizations and groups were contacted and visited to encourage input. A Public Input Meeting was held October 10 in Bozeman. Aggressively advertising the public input meeting resulted in greater attendance than last years meeting in connection with the planning process. Several phone calls and letters were received in response to the requests for input as well as recorded information from the public meeting.

Three public comment meetings are scheduled in December, 1995 at the following locations.

December 5	9:00 AM-12:00 Noon	Public Library 2 First Avenue East	Polson
December 7	9:00 AM-12:00 Noon	Yogo Inn 211 East Main	Lewistown
December 12	9:00 AM-12:00 Noon	City Hall 247 North 9th Avenue	Forsyth

5. DELIVERY OF PROGRAM SERVICES

MDOC completed another application cycle for the HOME program in FY 95. The program expands the supply of decent, affordable housing for low- and very low-income families; builds state and local capacity to design and carry out affordable housing programs; provides financial and technical assistance to participating jurisdictions, including model program development; and strengthens partnerships among all levels of government and the private sector in the development of affordable housing. The design, development, and implementation of the enhanced program spanned many months and included citizen involvement throughout many areas of the state.

In April 1995, all FY 94 HOME program funds were committed to 10 firm project contracts. Nineteen applicants submitted proposals for FY 95 funds in September 1995. The process of application, ranking and committing HOME funds to firm projects during the fall and

winter months provides for better alignment with the construction season. HOME application workshops were held in Glasgow, Miles City, Bozeman and Kalispell in June 1995.

Another HUD funded program is the Montana CDBG program, a competitive grant program designed to help communities of less than 50,000 people with their greatest community development needs. Eligible applicants are limited to general purpose local governments. All projects must principally benefit low- and moderate-income persons. The basic categories for local community development projects are housing, public facilities, and economic development. Housing projects may involve rehabilitation of homes owned or rented by low- or moderate-income families, as well as activities that improve the neighborhood in which the housing rehabilitation and/or new construction are taking place. CDBG funds play a key role in leveraging -- using government dollars to encourage investment of private dollars.

The Emergency Shelter Grant program continues to provide HUD funds to improve the quality of existing emergency shelters for the homeless, meet the costs of operating shelters and provide essential social services to help prevent homelessness. Ninety percent of the funds received are allocated to the 10 regional Human Resource Development councils (HRDCs) in Montana. While the funds available to the ESG program are not as large as those allocated to Montana's HOME and CDBG programs, the regional organizations are extremely dependent on the assistance received from the yearly allocation.

Specific guidelines that relate to the individual programs for CDBG, and HOME may be obtained by contacting the Department of Commerce. The Department of Public Health and Human Services may be contacted to obtain guidelines for the ESG program.

B. QUANTITATIVE ANALYSIS IN SUPPORT OF THE PLAN

Development of the FY 96 Consolidated Plan included a thorough analysis of quantitative data in the form of surveys, employment and income data, census data, forecast data, and past applications for program funding. In addition an Economic Benefits Analysis of State Housing and Public Facilities Programs has been prepared as well as updated economic and demographic information. A selective inventory of local public facility needs in the State has also been conducted and is included in this document.

II. CONSOLIDATED PLAN PROGRAMS

A. COMMUNITY DEVELOPMENT BLOCK GRANT PROGRAM

Montana administers nonentitlement Community Development Block Grant (CDBG) funds through the Community Development Bureau of MDOC. The CDBG program was established by the Federal Housing and Community Development Act of 1974 and has been administered by the state since 1982. The state makes grants only to units of general local government that carry out community development activities. Montana's Community Development Block Grant Program is a federally funded competitive grant program designed to help communities of less than 50,000 population with their greatest community development needs. Eligible applicants are limited to general purpose local governments. All projects must principally benefit low- and moderate-income persons.

The primary objective of the CDBG program is to develop viable communities by providing decent housing and a suitable living environment and by expanding economic opportunities for persons of low and moderate income. Seventy percent of the funds must be used for activities that benefit low- and moderate-income persons.

The basic categories for local community development projects are housing, public facilities, and economic development. Some of the activities that can be carried out with CDBG funds include the acquisition of real property; rehabilitation of residential and nonresidential properties (including special facilities for the handicapped); construction of new, affordable housing (when sponsored by a nonprofit organization); provision of public facilities and improvements such as water, sewer, or solid waste facilities or senior citizen centers; and assistance to for-profit businesses to promote economic development activities that will result in the creation or retention of jobs.

METHOD OF DISTRIBUTION

NOTE: *As this document is going to press, no major changes in the Montana CDBG program are proposed at this time.*

GRANT CEILINGS

The total amount of CDBG funds requested by an applicant (or joint applicants) must not exceed the following ceilings:

<u>Type of Grant</u>	<u>Ceiling</u>
Housing and Neighborhood Revitalization	\$400,000
Public Facilities	\$400,000
Economic Development	\$500,000

Applicants should apply only for the level of funding necessary to carry out the project. Grant requests must be sufficient either by themselves or in combination with other proposed funding sources to complete the proposed activities within 24 months from the date of the announcement of grant award by the Department. There are no minimum amounts required for CDBG requests.

APPLICATION DEADLINES

<u>Deadline</u>	<u>Type of Grant</u>
Public Facilities	June 4, 1996
Housing and Neighborhood Revitalization	October 1, 1996

Applications must be delivered or postmarked on or before the deadline date.

Applications for economic development assistance can be made at any time.

DISTRIBUTION OF FUNDS

1. Funds Available for the Montana CDBG Program

It is estimated that Montana's FY 1996 CDBG allocation will be \$8,714,000, the same amount received in FY 1995.

The distribution of funds for Montana's CDBG Program for federal fiscal year 1996 would be as follows:

Estimated Total Fiscal Year 1996 State CDBG Allocation	\$8,714,000
Less CDBG funds for State program administration and technical assistance to applicants and to grantees*	<u>361,420</u>
Amount Available for Award to Local Governments	\$8,352,580
Less 1/3 Allocation for Economic Development Projects	<u>2,784,193</u>
Total Available for Housing and Public Facility Projects	5,568,387
-less 1/3 Allocation for Housing and Neighborhood Revitalization	\$1,856,129
-Subtotal Available for Public Facilities Projects	3,712,258

* Extensive federal regulations accompany the program. DOC will use a small portion of the State CDBG allocation for administration of the program, as established by a statutory formula. The funds will be used to supplement State

resources to meet federal regulatory requirements and to support related technical assistance to applicants and grantees and project monitoring activities throughout the terms of the local projects

Of these funds, one percent of the annual allocation, or \$87,140, is specifically designated by statute to provide technical assistance to local governments and non-profit program applicants and recipients.

Technical assistance will be made available to local governments in the form of competitive grants on a local match basis. These grants may be used by counties and municipalities to prepare plans or studies related to CDBG eligible housing and public facilities projects and submittal of a CDBG application.

ECONOMIC DEVELOPMENT RANKING CRITERIA

For-profit businesses applying to the CDBG program under the sponsorship of a local government must meet certain thresholds to be considered for funding. These are listed in the CDBG ED Program's Application Guidelines. In addition, the community and business must demonstrate the following:

1. A quantifiable funding gap exists;
2. Management capacity;
3. Realistic historical and projected financial earnings;
4. Adequate security;
5. A sound, well-reasoned proposal;
6. Firm commitment of funds from private or public sector lenders;
7. Readiness to proceed; and
8. The project will support itself over time.

PUBLIC FACILITIES RANKING CRITERIA

Public facility applications will be evaluated according to the following criteria and may be assigned up to a maximum of 800 points:

1. Project Planning and Selection	75 Points
2. Need for Project	150 Points
3. Technical Review	100 Points
4. Community Efforts and Readiness	100 Points
5. Need for Financial Assistance	150 Points
6. Benefit to Low and Moderate Income	150 Points
7. Project Implementation and Management	<u>75 Points</u>
TOTAL:	800 Points

HOUSING AND NEIGHBORHOOD REVITALIZATION CATEGORY RANKING CRITERIA

Housing and neighborhood revitalization applications will be evaluated according to the following criteria and may be assigned up to a maximum of 800 points, based on the following ranking criteria:

1. Project Planning and Selection	100 points
2. Need	150 points
3. Community Efforts	100 points
4. Project Strategy and Impact	200 points
5. Benefit to Low and Moderate Income	150 points
6. Project Implementation and Management	<u>100 points</u>
TOTAL:	800 points

1. HOUSING

Regarding the housing category, CDBG funds are most often used to make low or no interest loans or grants to low- and moderate-income families to allow them to rehabilitate homes in substandard condition. CDBG funds can also be used to finance or subsidize the construction of new permanent residential units where the CDBG funds will be used by a local nonprofit organization. Housing projects can include site improvements to publicly owned land or land owned by a nonprofit organization to be used for new housing.

Transitional (temporary) housing is eligible under the public facilities category. The acquisition of sites for new housing and conversion of existing nonresidential structures for residential use are also eligible CDBG housing activities.

The following table provides a list of CDBG housing-related projects. Over the past 12 years, CDBG has funded 58 housing projects that equal more than \$22 million in CDBG funds alone.

TABLE 1
CDBG REQUESTS FUNDED - HOUSING

YEAR	RECIPIENT	PROJECT	AMOUNT
1982	Town of Alberton	Housing Rehabilitation	\$400,000
1982	City of Roundup	Housing Rehabilitation	400,000
1982	Town of St. Ignatius	Housing Rehabilitation	400,000

2. ECONOMIC DEVELOPMENT PROJECTS

The economic development category of Montana's CDBG program is designed to stimulate the economic development activity by assisting the private sector, in order to create or retain jobs for low and moderate income persons. CDBG funds are intended to be used in situations where a

funding gap exists and alternative sources of public and private financing are not adequate. These funds are intended to complement conventional business financing techniques and those of other federal programs such as the Economic Development and Administration and Small Business Administration. The program is also designed to complement the Department of Commerce programs for business assistance such as those administered by the Economic Development Division, the Montana Board of Investments, and the Montana Science and Technology Alliance.

The CDBG economic development program is designed to assist businesses by making appropriate long-term, fixed-rate financing available to them at reasonable interest rates, and by providing public improvements in support of economic development activities.

Typical eligible activities that fall within the CDBG economic development category include: land acquisition; public facilities and other improvements in support of economic development, such as water and sewer lines, and access road; loans for acquisition, construction, rehabilitation, or installation of commercial and industrial buildings, facilities, equipment, or working capital; employee training; and grants or loans from communities to nonprofit entities.

The CDBG Economic Development program awards over \$2 million annually to Montana's non-metropolitan (under 50,000 in population) cities, towns, and counties primarily for loans by the local government to private for-profit business projects. Loan repayments by the assisted business are usually allowed to be retained by the local government to provide loans to other businesses within the community. Between July 1, 1992 and June 30, 1994, twenty community projects were funded. The program provided \$4,099,375 in project financing, leveraged \$15,292,450 in other funds, and helped create or retain 490 jobs.

Over the last 14 years, the economic development portion of CDBG has awarded funding for almost 100 projects including 1995-funded projects. These funds, totalling almost \$25 million, are presented by project location and year of commitment in Table 2. Over the last seven years, with a CDBG financial commitment of more than \$12 million, about 1,933 jobs have been either created or retained in Montana's economy. Table 3 presents those jobs by year over the seven-year period.

3. PUBLIC FACILITY PROJECTS

In the public facility category CDBG funds have been used to upgrade or undertake the new construction of dozens of community water and sewer systems and other public facilities. During the last several years communities have also utilized the CDBG program to construct or rehabilitate senior citizen centers, centers for abused or runaway youth, and public nursing home facilities.

The projects listed below were funded wholly or in part, by CDBG funds. Over the last 12 years, 116 projects have been awarded for infrastructure assistance. These projects, distributed throughout the state, are presented by grantee and year as well as funding level in Tables 4 and 5. Table 4 presents principally water and sewer projects. Table 5 presents other assisted projects. Overall, more than \$40 million has been distributed since 1982.

B. HOME INVESTMENT PARTNERSHIPS PROGRAM

The HOME program, administered by the Housing Division under the Housing Assistance Bureau of MDOC, was created under Title II (the Home Investment Partnerships Act) of the 1990 National Affordable Housing Act. The program expands the supply of decent, affordable housing for low- and very low-income families; builds state and local capacity to design and carry out affordable housing programs; provides financial and technical assistance to participating jurisdictions, including model program development; and strengthens partnerships among all levels of government and the private sector in the development of affordable housing.

The program allows a wide range of eligible activities, including tenant-based rental assistance; assistance to homebuyers; property acquisition; new construction; reconstruction, relocation, or demolition; moderate or substantial rehabilitation; site improvements; and other activities to develop nonluxury housing.

Beginning with the use of Fiscal Year 1993 funds, HOME program beneficiaries are required under the Act, to make a contribution to affordable housing. The required contribution, or "match," for grantee applicants is calculated at 12.5% of non-administrative HOME funds expended. The balance (12.5%) of the match requirement is provided by MDOC funds and/or utilizing previous years' excess match. The matching funds must be used for HOME-assisted or HOME-qualified projects. As a general rule, investments which are contributions from the State/local government or private sources will be eligible to qualify as a matching contribution. Eligible sources of match include: cash; the value of foregone interest, taxes, fees or charges by both public and private entities;

value of donated land or real property; investments in on- or off-site improvements, bond financing, donated construction materials and voluntary labor. Ineligible match sources include federal funds and CDBG funds.

Based on the amount of HOME dollars invested, homeownership programs are subject to a period of affordability. In addition, sale of the property by the homebuyer during the period of affordability is subject to resale restrictions or a possible recapture of the HOME subsidy. The resale provision provides for the initial property to remain affordable for the period of affordability. The subsequent purchaser must be low income and occupy the property as a principal residence. The seller of the initial property will receive a fair return on his investment, but the unit must also be "affordable" to the new purchaser. This can be accomplished with a deed restriction with the right of first refusal or purchase. The HOME investment subject to recapture is based on the amount of HOME assistance provided and the affordability period it is based on. Repayment of HOME proceeds at transfer of the property must be reinvested to assist another homebuyer to obtain a home. The purchaser must also be a low-income household and occupy the property as their principal residence. There are three methods of recapture that are acceptable:

1. Recapture the entire amount of the HOME investment, except that the amount may be reduced prorata based on the time the homeowner has owned and occupied the unit measured against the required affordability period.
2. The net proceeds may be divided proportionally if the funds are not sufficient to recapture the full HOME investment plus enable the homeowner to recover a portion of his investment.
3. If agreed upon, the program may allow the homeowner to recover all of his investment before recapturing the HOME investment.

All metropolitan cities (except Billings and Great Falls), urban counties, contiguous units of local government, and CHDOs (Community Housing Development Organizations, certified nonprofit organizations) are eligible to apply for HOME funds under the program administered by MDOC. A formula allocation of funds is distributed to each state and eligible city. MDOC the City of Billings and the City of Great Falls are the only participating jurisdictions in the state. Fifteen percent of funds are set aside for programs owned, developed, or sponsored by CHDOs. HOME funds are distributed on a competitive basis. All HOME funds must assist families below 80 percent of the area median income.

The need for additional low-income housing units far exceeds the funds available to address the needs. The following table illustrates successful HOME funded projects that have been completed or are in the process of being completed at this time. From 1992-1994, the HOME Program has created or rehabilitated approximately 710 housing units and leveraged approximately \$35 million to housing for low and very low-income families. In addition, MDOC has contributed over \$666,000 to help Montana's HOME grantees meet federal match requirements.

C. EMERGENCY SHELTER GRANT PROGRAM

Emergency Shelter Grants (ESG), administered by the Family Assistance Division, are to help improve the quality of existing emergency shelters for the homeless, make available additional shelters, meet the costs of operating shelters, and provide essential social services to help prevent homelessness. The grants are 100 percent funded by the U.S. departments of Health and Human

Services and Housing and Urban Development; but, they required a 50 percent match that can be considered "soft" (e.g., volunteer, other in-kind matches). According to federal law, 90 percent of funds received must be allocated to the 10 regional Human Resource Development Councils (HRDCs). The grants fund the renovation, rehabilitation, or operating costs of homeless shelters, and the provision of follow-up and long-term services to help homeless persons escape poverty. Shelters to be assisted and service to be delivered are determined by the individual HRDCs receiving the allocated funds. In relative terms, these funds are small in comparison to Montana's HOME and CDBG funding allocations.

The Montana Emergency Shelter Program distributes funds based upon a formula allocation. The amount of funds allocated is determined on the basis of poverty and general population in each service area, relative to the poverty and general population of the entire state. Allocations of HUD ESG funds are as follows:

1990 OVERALL AND POVERTY CENSUS DATA			
AGENCY	1990 POPULATION PERCENT	1990 POVERTY PERCENT	AVERAGE PERCENT
Action for Eastern MT	11.08%	12.37%	11.73%
District 4 HRDC	3.33%	4.24%	3.79%
Opportunities, Inc.	14.13%	14.62%	14.38%
District 6 HRDC	2.77%	3.03%	2.90%
District 7 HRDC	18.00%	15.80%	16.90%
Rocky Mountain Devel. Council	7.35%	5.25%	6.30%
District 9 HRDC	8.18%	8.53%	8.36%
NW MT Human Resources, Inc.	13.48%	13.59%	13.54%
District 11 HRDC	13.35%	13.98%	13.67%
District 12 HRDC	8.33%	8.59%	8.46%
TOTAL	100.00%	100.00%	100.00%

Funds are distributed to each Human Resource Development Council. All HRDCs will submit workplans, budgets and reports outlining which of the allowable activities will be undertaken, how matching funds will be realized and a certification of local approval verifying that budgets and workplans have been reviewed and approved by a representative of the respective jurisdiction. The Department of Public Health and Human Services will execute contracts with all HRDCs within thirty (30) days of HUD approval of this application.

Actual project proposals for ESGP funds have included the renovation of a building (asbestos removal and lead abatement) in order to use it as a transitional facility. Funds are also used to provide medical services to homeless individuals and families, to pay for hotel/motel rooms for homeless individuals, to pay rent or mortgages for homeless families, and to provide support groups, individual counseling, referral, advocacy and transport to homeless persons. Shelters have used funds

to pay rent or mortgages, pay utilities, buy furnishings, and pay for maintenance and operational costs of their facilities. ESGP funds are also used to pay security deposits on rent or utilities (or first month's rent) to enable homeless families to move into their own dwellings. The State has elected to allocate its funding to the non-profit HRDCs.

III. STATE PROFILE

A. MONTANA'S ECONOMIC PROFILE

Montana is the fourth largest state in land area. The population density of areas around Montana range from a high of 3,470 people per square mile in Great Falls, to a low of .31 per square mile in Petroleum County, as reported in the 1990 Census. This helps to account for the diversity of housing, public facility, and community development conditions throughout the state. With about 856,000 people, the state has only two entitlement areas:¹ Billings and Great Falls. While the entitlement areas, along with Native American Tribal Organizations, are required to submit separate Consolidated Plan documents under the National Affordable Housing Act of 1990 (as well as other legislation), characteristics of Billings, Great Falls, and Native American Tribal Lands have been integrated into portions of the county and statewide analysis presented herein.

The following discussion presents historic economic data and trends within Montana as well as comparisons with neighboring states. This step in the analysis addresses the health and viability of various industries within the larger region and offers perspective regarding long-term viability of historic key industries and new emerging industries showing promise in Montana.

ECONOMIC STRUCTURE

The economic health of any state depends largely upon the vitality of its *basic industries*. Basic industries are those economic sectors that bring income into the state, usually through the export of products or services. All other economic transactions are *nonbasic*. For example, when workers in the exporting industries spend their earnings locally, they create nonbasic economic activity. Many people focus on the relationship of basic to nonbasic employment when gauging a state's economic health. However, while employment is indeed an important measure of overall economic activity, it is the flow of income, not the level of employment, that sustains an expanding economy.

Each dollar of basic income spent in the state generates additional dollars of nonbasic income. As the ratio of nonbasic to basic income rises, the economy grows stronger. Products and services previously imported begin to be supplied locally. The local economy becomes increasingly integrated, and income leaves the area more slowly than before. More and more state residents begin to enjoy the benefits of each basic income dollar. When an economy is in decline, the reverse occurs: the ratio of nonbasic income to basic income diminishes. As imports rise, basic income dollars leak out of the state more quickly, and fewer residents benefit from each basic income dollar.

The economic analysis presented herein regards income, not employment, as the primary driver of economic activity. This is a critical distinction, because some "basic" components of Montana's economy do not directly involve basic employment. For example, retirees living off their

¹Metropolitan areas with populations of 50,000 or more.

investments may bring income into Montana. Even though they are not employed, their demand for goods and services generates jobs and local income. Also, various forms of welfare, or “transfer payments” such as Section 8 housing assistance, are considered basic when they flow from outside to inside the state. Such payments cause demand for goods and services, resulting in nonbasic employment.

The ratio of nonbasic income to basic income is called a *multiplier*. The multiplier rises as the number of economic transactions increases, and it falls as transactions decrease. Diagram 1, at right, traces historical fluctuations in the nonbasic/basic income multiplier for Montana.² After reaching a peak in the period 1976 through 1978, the multiplier diminished rapidly, indicating that Montana’s economy had entered a period of decline. While it is less dynamic now than it was in the 1970’s, the economy is improving. Since 1990, the multiplier has risen sharply.

**DIAGRAM 1
NONBASIC/BASIC MULTIPLIER**

The earlier decline can be traced to three influences. First, Montana has long depended upon resource-based industries to bring dollars into the state. Downturns in these industries dealt heavy blows to Montana’s economy, as periods of low demand for its resources adversely affected employment. Demand for resources follows business cycle influences and can be expected to continue to rise and fall long into the future. Second, and more ominously, Montana has been profoundly affected by structural change in national and global markets. Third, Montana’s resource base has been dwindling and is expected to continue to do so.

Structural change refers to long-term economic change, not the short-term fluctuations normally associated with the business cycle. It is occurring on a global level because of changes in technology, communications, information management, and consumer preferences. These changes have stimulated consolidation and mechanization, contributed to the rapid development of emerging world markets, and stimulated manufacturing production of whole sectors of regional economies in lower-wage countries. Development and production opportunities are cropping up world-wide, and proximity to end-user markets and transportation systems is becoming increasingly important. Mining is one example of a Montana industry currently in the throes of structural change. Montana’s mining industry is moving quickly toward mechanization even as some older facilities are closing due to increasing environmental constraints.

²The basic and nonbasic sectors of Montana’s economy are presented in Section C of this report.

Montana has struggled to accommodate such structural change during a time when its raw material base appears to be diminishing, owing to the nonrenewable nature of products that are mined and milled. For example, harvests from federal timber lands are expected to decline substantially in the near future. University of Montana studies have forecast declines as large as 50 percent in northwestern Montana's lumber and wood products employment over the next 10 years. But as prices for wood products have increased, so has the competitiveness of substitute goods, such as metal, plastics, and concrete. Such competition tightens profit margins, constrains wage increases, and causes further mechanization as jobs are replaced with machines. Industry may have greater opportunity elsewhere. Fortunately, Montana's economy has an amazing capacity to adapt; its basic industries may be able to compensate for their declining size by increasing their competitiveness and efficiency.

THIRTEEN INDUSTRY SEGMENTS

These key economic trends -- business cycle influences, national and global economic structural change, and a dwindling or constrained traditional resource base -- have all affected Montana's economy profoundly over the last twenty-five years; and these influences will likely continue to impact the State's business community. But there are also other subtle influences evident in Montana's economy, ones that are aiding to propel Montana's economic evolution toward a more abundant future.

Table 1, on the following page, begins the presentation by reviewing thirteen different economic sectors and their employment levels since 1969. Overall, total employment in Montana has been expanding at about 2.0 percent per year, having risen from 296,699 in 1969 to 486,556 in 1994, a modest but reasonable compound annual growth rate. Of particular interest are Montana's three main traditional export industries: farming, mining, and manufacturing.

 FED M - Federal Military
 S&LG - State and Local Government

Farm employment has declined for nearly twenty-five years, from 36,708 jobs in 1969 to 28,338 jobs in 1994. While it held steady from the late 70's to the late 80's, it has again begun to decline. Unlike farming, Montana's mining industry grew rapidly until 1981, 12.7 percent per year between 1976 and 1981. Since then, however, it has declined steadily, falling to nearly half of its 1981 level and less than its 1969 level. Long-term difficulties for the mining sector are expected. Manufacturing employment reached a high of 29,069 jobs in 1979, a peak lumber and wood products production year. The sector shed more than 6,500 jobs over the following three years, falling to 22,565 jobs--the lowest level over the twenty-five year history. Today, the sector is showing some signs of recovery and employment is again growing; manufacturing had 27,948 jobs in 1994, but this represented only an 8.6 percent increase over 1969 employment.

The track record of each of these industries is shown in Diagram 2. Note, however, that in contrast to agriculture and mining, there has been a slight rise in manufacturing employment over the last four to five years. Food products, lumber and wood products, and primary metals--all parts of

the traditional export base--are still sinking. Traditional manufacturing industries are not improving; the increase appears to be due largely to new and emerging industry trends for Montana. These new economic events mean that Montana's economy is becoming less dependent upon its traditional resource base; and, the economic landscape is showing signs of expansion and diversification. Table 2, shows employment levels in each of the state's two-digit SIC manufacturing sectors.

One can see that food products (SIC 20), lumber and wood products (SIC 24), petroleum (SIC 29), and primary metals (SIC

33) have all lost employment since 1979. These manufacturing industries have sprung from traditional resource-based sectors, supported by what can be extracted from Montana's raw materials base. Yet economic growth has been occurring in recent years, and in very interesting areas. Furniture, for example, is a significant value-added industry that has exhibited growth. Instead of exporting lumber and wood, Montanans are adding value to the raw lumber. Also, leather products industries are increasing their presence in the state. There is even modest growth in high technology (typically clustered in SIC 35, 36 and 38). Most significantly, the miscellaneous industry category is expanding and is currently the fourth-largest manufacturing sector in the state. The emergence of these industries bodes well for the state of Montana. Efforts to diversify the state's economy are

proving successful and will help insulate the state from future sharp downturns in any one industry, such as lumber and wood products.

As the three traditional sectors of agriculture, mining, and traditional manufacturing have declined in relative importance recently, sectors involved with the production of services, retail and wholesale trade, and similar nonindustrial activities have grown. Retail employment has nearly doubled over the 1969-94 period, from 49,136 to 94,981: a 2.67 annual growth rate. Services have expanded even more quickly; a 3.94 percent annual growth rate has pushed this sector up from 51,696 in 1969 to around 135,819 in 1994.

1994	11,766	10,781	31,770	19,378	22,005	26,739	21,082	10,562	12,371	14,612	29,361	12,931	17,244	15,982

Together, retail and service employment currently exceed 47 percent of all employment in Montana. However, these two sectors produce only about 38 percent of wage dollars earned in the state. In fact, both sectors offer an average wage well below Montana's 1994 average real wage of \$15,982: \$10,562 and \$14,612, respectively. This lower wage "mix effect" helps to explain why Montana's current average earnings per job are lower than the 1969 average wage of \$16,390. This, and all industry wage levels are presented in Table 3. While average employee earnings from all of Montana's industries peaked in 1973 (\$19,863 in real 1987 dollars) earnings have seen a significant slide since then, a rate decline of over 1 percent per year (1973 through 1994).

Annual earnings in agriculture are very dependent upon weather influences and world market conditions; consequently, those earnings tend to swing wildly. In 1994 the average agricultural job paid only \$11,766 in real 1987 dollars. Manufacturing has gained little over the last twenty-five years, rising in real terms from \$21,026 to just \$22,005. Mining and federal civilian earnings have both grown in a healthy fashion, though not enough to offset job losses, with mining rising 1.4 percent per year (to \$31,770) and federal civilian employees averaging \$29,361 per employee. Other sectors of the economic picture have languished too. Agriculture, forestry, and fishery services, along with construction and wholesale and retail trade have all fallen in real terms over the period. Retail employment pays the least, on average, with an annual real salary of just \$10,562 in 1994. Overall, Montana's average real wage has been growing at .10 percent per year. This means that while the nation's average real wages per job are expanding over time, rising to \$21,565 in 1994, Montana's relative wage rate is weakening, and falling in real terms. Diagram 3, on the following page, displays the historic relationship between Montana and the US average wage rates.

Nevertheless, the evidence of the last five years suggests that an economic expansion is underway for Montana, even though the wage levels associated with some of the employment sectors are rather low. Significantly, Montana's unemployment rates have been easing over the last two or three years. Table 4, at right, presents unemployment rates

DIAGRAM 3
MONTANA VS USA AVERAGE EARNINGS

in each of Montana's counties, as well as the entire state. Some areas of the state appear fixed in a protracted state of high unemployment, such as Big Horn, Glacier, Lincoln, and Sanders Counties which all have double-digit unemployment rates. The rates for 1994 were 11.7, 11.6, 13.6, and 10.8 percent, respectively. But other areas of the State are experiencing solid growth. Gallatin's unemployment rate, which was 5.2 percent in 1991 is now a stunning 2.3 percent. The natural unemployment rate is about 4 percent, under which (with increases in the demand for labor) wages begin to be bid upwards. Overall, the State's unemployment rates have fallen since the peak rate of 6.9 percent in

1991. In 1994, Montana's overall unemployment rate was a relatively low 5.1 percent.

SUMMARY

What is happening in Montana appears to be occurring throughout the region. Montana's neighboring states--Idaho, North Dakota, South Dakota, and Wyoming--have experienced structural changes and stresses to their economies that are similar to Montana's, but most have demonstrated resilience and gritty determination to compete in regional, national, and global markets. Those states which have moved towards economic diversification have fared the best under the challenging new economic conditions.

All states in the region have experienced declines or stagnation in employment in their economies over the years and appear to have put their

DIAGRAM 4
AVERAGE WAGE RATES IN USA AND REGION

past economic failures behind them and are currently marching toward a brighter future. Nevertheless, recent history of the area economies should serve as an important reminder for Montana. When a state's economy depends too heavily upon only one or two sectors, downturns in those sectors can be devastating. Diversification helps to ensure the long-term health of a state economy.

For a more detailed explanation of the region states of Idaho, North Dakota, South Dakota, and Wyoming, please refer to the *Economic and Demographic Analysis of Montana and Economic Benefits of MDOC Housing and Infrastructure Program Activities*.³

COMPARATIVE ADVANTAGE LOCATION QUOTIENTS

Trends in the traditional industrial sectors provide one measure of a state's economic health. Location quotients provide a second measure. *Location quotients* quantify a state's or region's comparative advantage in a particular economic sector. The quotients are calculated by dividing one state's market share of employment in a particular sector by the nation's share. The resulting ratio is taken as indicative of comparative advantage, or the likelihood that favorable conditions exist for a particular industry in the area. Comparative advantage may be the result of several factors, including skilled labor in a particular industry, favorable business climate, available infrastructure, or proximity to raw materials. A state enjoying a comparative advantage in a particular industry will likely see the emergence of a well-developed set of inter- and intra-industry linkages in response to increased demand for business services in the particular industry. When a state has a location quotient greater than 1.0 for a particular sector, it usually has an advantage over other areas, since a greater share of employment activity exists there than elsewhere. Wherever location quotients are less than one, there is probably no comparative advantage. The following discussion continues with the regional context, analyzing comparative advantage for the five states. It then looks more closely at Montana's individual industries within major Industry Divisions.⁴

The 1994 location quotients for each state in the region are presented in Table 5, as they pertain to each of the ten Industry Divisions.

³ A copy of this document maybe obtained through the Montana Department of Commerce Census and Economic Information Center.

⁴ Industry Divisions herein described roughly pertain to Standard Industrial Classification Divisions, with the exception that Division A, agriculture, is split into two categories and Division J, public administration, is excluded.

TABLE 5
MONTANA AND SURROUNDING STATES
COMPARISON OF 1994 LOCATION QUOTIENTS
MAJOR INDUSTRY DIVISIONS

SECTOR	MONTANA	IDAHO	N. DAKOTA	S. DAKOTA	WYOMING
Farming	2.802	2.631	4.637	4.205	2.014
Ag, Forestry, Fishery Services	1.436	2.182	1.043	1.181	1.384
Mining	2.174	0.764	1.613	0.951	10.596
Construction	1.062	1.457	0.933	0.967	1.313
Manufacturing	0.436	0.912	0.418	0.756	0.300
Trans, Communicate, Utilities	1.102	0.910	1.144	0.922	1.149
Wholesale Trade	0.861	0.970	1.126	0.972	0.590
Retail Trade	1.161	1.041	1.024	1.071	1.093
Finance, Insurance, Real Estate	0.814	0.848	0.778	0.855	0.813
Services	0.954	0.810	0.895	0.866	0.799

These data are quite interesting. While several of the region's economic sectors discussed previously are having some difficulty, they appear better off than similar industries nationwide. For example, agricultural employment has undergone a long slide, but it still remains a strong economic sector when compared to the nation. This is also true for mining in most of the region (except Idaho and South Dakota).

Relative to the nation, Montana currently enjoys a comparative advantage in those sectors with location quotients greater than 1.0. Particularly strong are Montana's traditional industries of farming and mining, with location quotients of 2.80 and 2.17, respectively. But construction also holds a greater share of total employment in Montana than in the nation.

With location quotients greater than the national norm, construction is expanding at a faster rate in Montana than in the nation. Construction in Idaho and Wyoming is also growing faster than the national rate. In addition, all five states have a larger portion of their total employment base devoted to retail trade than does the nation as a whole. This implies the presence of a regionally significant tourism base. Montana also enjoys comparative advantage in agriculture-fisheries-forestry services (AFF), which implies significant employment in non-federal resource management activities, and in transportation-communications-and-public utilities (TCPU), which indicates export of electricity and oil-based products, via pipelines, along with relatively greater activity in rail transport.

On the other hand, there is no comparative advantage in the manufacturing sector regionally. This condition implies that, absent significant manufacturing infrastructure development (i.e., services, skilled labor, intra-industry linkages), expanding the manufacturing sector will be an upward battle.

INDUSTRY COMPARATIVE ADVANTAGE

As the preceding discussion implies, significant changes are affecting Montana's comparative advantage. The following narrative demonstrates the degree to which each of the ten industry Divisions has been affected over the last twenty-five years.

Diagram 5, depicts changes in Montana's farming location quotient from 1969 to the present. This sector always has been and will likely continue to be an important export sector. However, its comparative position depends upon crops and livestock raised as well as market and weather influences. The location quotient for this sector rose from 1977 through 1990 but has trailed off over the last four years.

DIAGRAM 5
LOCATION QUOTIENT
MONTANA FARMING SECTOR

Diagram 6, presents the historic trends evident in the AFF sector, or agriculture-forestry-fishery services. Over the last 15 years, this sector has seen some resurgence in relative importance. The category is comprised of the following types of employment activities: soil preparation, crop planting and harvesting, veterinary services, farm labor and management services, landscape and horticultural services, forest nurseries, other forestry services, fish hatcheries, and hunting, trapping, and game propagation. Since each of these activities emphasizes increased management of currently scarce raw material, or natural resources, it is no surprise that the relative advantage for employment opportunities is rising. However, in the last few years, the intensity of management activities has remained relatively constant.

DIAGRAM 6
LOCATION QUOTIENT
MONTANA AFF SERVICES SECTOR

DIAGRAM 7
LOCATION QUOTIENT
MONTANA MINING SECTOR

Diagram 7, at right, presents the historic trends in Montana's mining industry. The large amplitude in this series is indicative of a highly cyclical industry. The general downward trend indicates that the relative importance of this particular sector is waning and will likely continue to do so. This sector includes metal and nonmetallic mineral mining, coal mining, and oil and gas extraction.

Diagram 8 presents the historic trends evident in Montana's construction industries. A period of relative economic expansion occurred from 1969 through about 1977. The next ten years saw construction decline relative to national construction activity. A period of relative calm existed between 1987 and 1990; since 1990, however, a sharp rise in construction activity relative to the nation has occurred. This rise is representative of the general level of recent expansion in the state.

DIAGRAM 8
LOCATION QUOTIENT
MONTANA CONSTRUCTION SECTOR

Diagram 9 presents the relative trends seen in the manufacturing sector. While the 1994 location quotient is significantly below 1, indicating that the sector is unlikely to have an industry-wide comparative advantage, it is worth noting that the sector has been rising steadily since 1982. Recall that between 1979 and 1982 the lumber and wood products industry dragged the state's entire manufacturing sector down. Although the outlook for lumber and wood products is somewhat dim, the current trend is for continued rising activity in Montana's manufacturing sector.

DIAGRAM 9
LOCATION QUOTIENT
MONTANA MANUFACTURING SECTOR

Transportation, Communication, and Public Utilities (TCPU) are presented in Diagram 10. While the comparative advantage relative to the nation is above 1, current trends do not appear promising. The location quotient has fallen from a high of about 1.35 in 1980 to about 1.1 in 1994, nearly a 20 percent drop. Industries within this division include rail transportation, trucking, warehousing, pipelines, air transportation, communication, and electric, gas, and sanitary services (water and sewer supply systems are included). This category includes infrastructure investment.

DIAGRAM 10
LOCATION QUOTIENT
MONTANA TCPU SECTOR

Diagram 11 presents the location quotient for Montana's wholesale trade sector. Between 1974 and 1988, the sector enjoyed a relatively higher quotient. However, no comparative advantage existed. Today, the data indicates that these values have returned to their long-term growth trend, showing a slight increase over time.

Diagram 12 presents the same concepts for the Montana retail trade sector. As one would expect, this sector appears to reflect business cycle activity, with declines in 1974-75 and 1979-81. During the mid 1980's when retail activity was expanding nationally, Montana's retail sector did not keep pace; in a relative sense, Montana's share declined. However, since the 1990 upturn in Montana, the retail sector has been rising appreciably. Throughout the twenty-five year analysis period, the location quotient has always been above 1. This means that this sector is responsible for significant numbers of jobs, thanks largely to tourism. Unfortunately, the retail segment has the lowest wage rates of all industries, as noted earlier in this document.

Diagram 13 presents data pertinent to the Finance, Insurance, and Real Estate (FIRE) sector. In 1969, employment in this sector could be equated with the national level of activity. However, such advantages disappeared quickly, and the sector appears to have maintained a constant rate of loss in relation to the national trends in employment. It is reasonable to assume that this sector will continue to decline.

DIAGRAM 11
LOCATION QUOTIENT
MONTANA WHOLESALE TRADE SECTOR

DIAGRAM 12
LOCATION QUOTIENT
MONTANA RETAIL TRADE SECTOR

DIAGRAM 13
LOCATION QUOTIENT
MONTANA FIRE SECTOR

Diagram 14, depicts Montana's comparative advantage in the services sector. Even more dramatically than the retail sector, the services sector follows a cyclical trend. The amplitude of the data swings wildly in periods of recession, such as in 1974-75 and 1981. The sector declined steadily again until 1990, when signs of improvement began appearing.

From the standpoint of location quotients, then, Montana's traditional industries do not appear quite so ill equipped. While Montana has indeed lost a portion of its traditional industrial base, it has managed to expand in other areas and to retain a greater share of its remaining industrial base than the national economy has retained.

While somewhat beyond the scope of analysis for this report and subsequent analysis, Table 6, on the following page, presents the 1994 location quotients for 73 separate industrial classifications. The table usefully reveals each state's degree of dependence upon individual specialized industries.³ For example, the table shows that Wyoming's dependence upon the highly cyclical mining industry is more precisely a dependence upon coal mining and nonmetallic mineral extraction activities. It also shows that Idaho, the state with the most diverse economy, the strongest growth rates, and the highest wage rates does not have location quotients unevenly concentrated in any one industry category.

DIAGRAM 14
LOCATION QUOTIENT
MONTANA SERVICES SECTOR

³Those data represented by a "(D)" are considered by the BEA to fall under disclosure guidelines and data can not be released.

Table 7 takes the Montana location quotients that are greater than 1 and ranks them by size. Many of the traditional industrial sector industries appear at the top, i.e., metal mining, lumber and wood products, and coal mining. This single year "snapshot" provides no guarantee of long-term health, only relative current position.⁴ Together these industries represent most two-digit industrial sectors that have net export activity for the state of Montana.

SUMMARY

Historically, Montana's economy has depended on relatively few resource-based industries. This dependence has caused wide swings in employment opportunity during times of normal business cycle fluctuation. Concurrently, Montana's resource base has been growing increasingly scarce, causing long-term decay in resource-based industrial output. Changes in national and global markets are continuing to pressure Montana's margins in these industries. As a consequence of these conditions, Montana's economy has seen a general state of decline until 1990. While traditional resource-based industries are not better off, development is occurring in other areas with greater opportunity and potential.

Employment is rising, unemployment is falling, and more basic income is staying in the state, generating more economic opportunity than before. Unfortunately, average wage rates have not yet experienced significant rises. Economic theory suggests that with falling unemployment rates and rising employment rates, a tightening in the labor market should soon occur, thereby bidding up wage rates. There is as yet no conclusive evidence that wages have begun to rise.

During the last four years, Montana's population has increased at some of the fastest rates seen in twenty-five years. Such growth has placed significant pressure on the supply of affordable

⁴Federal civilian and military employment are included for reference purposes only. Both sectors are considered 100 percent basic sector employment.

housing, and the rate of growth in the housing stock is not matching the rate of change in the population.

Concurrent with the rising cost of housing is the rising level of poverty in the state. Examination of households and recipients receiving food stamps indicates that poverty may be surpassing the rate reported in 1990, when 15.6 percent of the population was below the poverty line.

B. ECONOMIC BENEFITS MDOC HOUSING AND INFRASTRUCTURE PROGRAMS

The economic benefits analysis conducted herein takes the form of an economic impact assessment, measuring both direct and indirect programmatic effects by type of expenditure, particularly as they relate to Section 8, the Montana Board of Housing, the Low Income Housing Tax Credit, HOME, and the Community Development Block Grant Programs. Economic impact analysis is a useful tool for assessing both the positive and the negative outcomes of particular events in an economy, such as industrial facility citings, specific public policy changes, or discrete changes in taxation. Four indicators are examined in assessing the economic benefits of the MDOC program actions. These indicators are employment, income, income taxes, and residential property taxes.

OVERVIEW OF METHODOLOGY

The economic health of an area is dependent upon the vitality of its basic industries, those economic sectors that cause income to flow into the area due to export of a good or service. Basic activity also includes the transfer of government or retirement funds into the state. The analysis presented herein examines in detail this second type of basic activity; federal program funds that flow into the state and are expended for project activities contribute to the formation of basic income. For example, when a HOME or CDBG project expends funds to build a house, workers are considered basic sector employees, as is their income, which in turn generates non-basic employment and income effects. Both the basic worker and non-basic worker pay income taxes, and the housing unit that was constructed pays residential real estate taxes. In the case of a facility constructed for a public entity or non-profit agency, fees are paid in lieu of taxes. This analysis also assumes that Montana Board of Housing Funds act in a fashion similar to infusions of funds by out-of-state entities.⁵

The economic impact analysis uses established methods and techniques to quantify effects associated with measurable economic stimuli. There are two approaches used in assessing economic impacts: the economic base and the input/output (I/O) model. Both models are designed to predict

⁵This analysis does not currently consider the future economic effects of bond replacement to in-state or out-of-state bond holders, only the initial impacts associated with expenditures of bond proceeds.

changes in the economy resulting from a particular stimuli.⁶ However, the economic base model is better able to adapt to the more dynamic changes in an economy that is undergoing structural change, as is Montana's economy. On the other hand, the I/O formulation has a greater capacity for detail in the model structure; this type of model has the ability to trace interindustry transactions or dollar flows, such as those related to single-family rehabilitation or construction of water and sewer systems.

The formulation of the economic benefits model presented herein borrows from the I/O formulation the interindustry transactions approach by using estimates of construction payroll per employee and expenditures per employee, by specific types of housing or infrastructure projects. From such relationships, basic income and basic employment data are computed. Then, estimates of the non-basic income and employment can be derived. Montana Adjusted Gross Income (MAGI) tax payments by income category are then applied to each type of job and the respective earnings level to develop income tax estimates. Further, effective property tax rates for residential property are applied to the expenditures, by type of housing project, to develop estimates of the property taxes paid. The following discussion presents each of these issues in greater detail and then presents the findings.

PROGRAM EXPENDITURES

A wide variety of housing and infrastructure program activity was evaluated for this analysis. This is because program expenditures per employee and employee salaries differ significantly among different categories of expenditure. The categories of expenditure considered are presented below.

- New Construction of Single Family Dwellings
- Acquisition and Rehabilitation of Single Family Dwellings
- New Construction of Multi-family Dwellings
- Acquisition and Rehabilitation of Multi-family Dwellings
- Tenant Based Rental Assistance (Certificates, Vouchers, Other)
- Repair, Replacement, and Maintenance of Sewer Systems
- Repair, Replacement, and Maintenance of Water Systems
- Repair, Replacement, and Maintenance of Solid Waste Systems
- Storm Water Drainage Improvements
- Senior Centers, Construction and Rehabilitation
- Residential Treatment & Other Health Related Facilities, Construction and Rehabilitation
- Educational Facilities, such as Day Care Centers, Construction and Rehabilitation
- All Other CDBG Expenditure Types Combined
- All Program Administrative Fees, for Section 8, HOME, and CDBG

Some programs have unique or special assumptions about how to use the data in the analysis. The following tables present each of these program expenditure levels over the 1985 through 1995 period; the narratives address several of the assumption issues.

⁶While both are classed as conditional predictive models, there are significant differences between the two approaches. These differences are briefly discussed in the Technical Appendix.

Table 8, at right, presents program expenditures for MDOC's Section 8 Certificate and Voucher Program, as well as the Montana Board of Housing Single Family Loan Program. The Section 8 expenditures are true income transfers in that the payment is a rental subsidy, thereby increasing net disposable income. They are considered 100 percent basic income. This program is a significant player in the housing market, expending \$13.4 million dollars in 1995. The column titled "Existing" refers to MBOH loans for existing housing units, as they pertain to acquisition (and perhaps some rehabilitation) of the unit. "New Cnstr" refers to newly constructed homes, and "Value" represents the value of the housing units for property tax purposes. The MBOH programs have been making the greatest expenditures by far, with over \$73.5 million expended in 1995 alone, and nearly \$480 million since 1985.

Table 9, at right, presents the CDBG program expenditures associated with residential rehabilitation and new construction.⁷ For the purposes of the analysis presented herein, 100 percent of the new construction expenditures are considered equal to the market value of the housing. For the rehabilitation expenditures, 75 percent of the expenditure is assumed to translate to improved market value of the home, and is subject to property tax. The CDBG program contributed slightly over \$1 million in 1994 toward housing development in Montana.

TABLE 8
PROGRAM EXPENDITURES

1994	88,000	945,000	270,366	1,033,000
1995	NA	NA	NA	NA

⁷Data presented in this table is preliminary. CDBG funds have been expended over the entire period of analysis (1985 through 1995), but were not made available for this analysis. Further, estimates provided were incomplete, and assumed values were stipulated for the 1994 program year; all data is assumed to be single-family privately owned property. Annual totals are believed to under represent actual expenditures.

TABLE 10

1995	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA

Table 10, above, presents expenditure data for the HOME program. Note that the HOME program data does not go back to 1985; HOME was created by the 1990 Cranston-Gonzalez National Affordable Housing Act. Program funds for 1995 have not yet been spent. Here, data has been separated into multi-family and single-family structures, as well as new construction, rehabilitation, or acquisitions, tenant-based rental assistance (TBRA), and administrative fees. Program managers for the HOME program were able to identify whether funds were received by public, non-profit, or private entities, thereby enhancing the ability to accurately represent the property tax liability associated with the residential property. In 1993, the last year funds were fully expended by grantees, the HOME program expended nearly \$3 million dollars toward affordable housing in Montana.

1995	NA	NA	NA	NA	NA	NA	NA	NA	NA

Table 11, presents Community Development Block Grant Program infrastructure expenditures over the analysis period.⁸ The facility types have been separated to identify the specific impacts associated with the program. In 1992, the last year for which CDBG reported expenditures (1993 and 1994 were estimated), the program expended \$1.2 million in infrastructure projects.

TAX RATES

The economic benefits analysis incorporates current property and income tax rates in computing taxes paid to state and local government. Table 12, on the following page, presents several concepts used in defining the Statewide Average Effective Tax Rate on residential property.⁹ For comparison and background information, four property classes are presented: residential, residential low income, mobile home, and mobile home low income. Low income households can get discounts on their property tax rates through two methods, a ceiling on assessed value and a sliding scale based on adjusted gross income. Households in these categories can feasibly pay as little as zero property tax, if they fulfill all requirements. For the purposes of the economic benefits analysis, all privately held property is assumed to be taxed at the residential class rate, with one exception.

Between 1985 and 1986, assessed valuations approximately doubled in Montana, thereby altering the effective tax rate. The restructuring of assessed values was intended to realign them more closely with the market values. Therefore, the 1985 property tax rates use one half of the market value.

An interesting note regarding property tax rates is that while certain types of government entities, whether state, county or local have had significant changes in average mill levy rates during the 1986 through 1994 period, the statewide average effective tax rate continues to climb. Between 1986 and 1994, this rate rose nearly 5.6 percent per year. Since 1995 data is not yet available, effective tax rates are held constant between 1994 and 1995.¹⁰

⁸Data presented in this table is preliminary. CDBG funds have been expended over the entire period of analysis (1985 through 1995), but were not made available for this analysis. Further, estimates provided were incomplete, and assumed values were stipulated for the 1993 and 1994 program years. Annual totals from the table are believed to significantly under represent actual expenditure levels.

⁹All data used to compute average effective tax rates are taken from the *Biennial Report of the Montana Department of Revenue*, 1984 through 1994 issues.

¹⁰Assuming a constant growth rate, the 1995 effective tax rate should be about 1.60 percent of assessed value (market value). Therefore, use of the 1994 value represents a conservative estimate of property taxes paid.

TABLE 12
MONTANA RESIDENTIAL PROPERTY TAX RATES
1985 THROUGH 1994

	1985	1986	1987	1988	1989	1990	1991	1992	1993	1994

Mobile homes were categorized as class 12 until 1990, after which they are considered class 4 property.

Table 13, on the following page, presents the amount of tax paid by individuals within a broad array of Montana Adjusted Gross Income (MAGI) categories. For example, an individual with a MAGI between \$20,000 and \$21,000 would have paid \$564 in 1993. In 1985, that individual would have paid \$1,260.¹¹ Across all income tax categories, taxes being paid are declining.

Interestingly, between 1987 and 1988, while taxes paid in all MAGI tax categories declined, the average tax paid increased. This was due to the number of taxpayers filing returns with zero or less than zero income. Table 13 indicates that over 59,000 returns, or 14.5 percent of all returns, had zero or less than zero income in 1987. In 1988, only 3 percent had zero or less income. Further, while taxes paid within each MAGI category are declining perceptibly, the average tax paid is rising in both nominal and real terms.¹²

For the purposes of this analysis, income taxes are paid by workers in the housing or infrastructure sector identified previously and at amounts specified in Table 13. In the economic benefits model, real average wage rates are converted to nominal dollar amounts and the proper MAGI tax bracket is applied for each year over the 1985 through 1995 period. This computation assumes that workers have only this earned income, with no further adjustments to income. In regard to itemized deductions, or other credits against taxes, it is further assumed that these wage earners are representative of the average Montana wage earners in these categories; in other words, they are like the average taxpayer. Hence the taxes owed within these categories best represent taxes paid by wage earners.¹³

¹¹Data in this table is expressed in nominal terms, or not adjusted for inflation. Further, all data taken directly from published pages of the *Biennial Report of the Montana Department of Revenue*, 1984 through 1990 issues; with unpublished reports for 1990 through 1993 provided by Mr. Larry Finch of the Office of Research and Information, MDOR.

¹²Recall that earnings per worker, as noted earlier in this document, are lower today than in 1969. This implies that while real earnings are declining, both property and income taxes are rising. Working citizens of Montana are finding affordable housing more difficult to locate due to other considerations besides rising housing prices.

¹³As per Larry Finch, Program Manager, Office of Research and Information, Montana Department of Revenue, telephone conversation 9-18-95.

IMPACT COEFFICIENTS

The economic benefits analysis computes additions to basic income by use of a set of coefficients that represent the payroll per employee and the dollar value per employee for investment in each type of housing or infrastructure activity. Data is presented below in Table 15 and applies to the 1987 I/O benchmark data files developed by the US Department of the Census, Bureau of Economic Analysis. Several assumptions pertaining to this data were required. First, data applies to very specific "commodities," or types of construction products, such as residential single family homes or water systems. Further, this data is comprised of national averages, as specific regional tabulations were not available.

TABLE 15
IMPACT COEFFICIENTS
1,000's OF DOLLARS PER EMPLOYEE
1987

CONSTRUCTION ACTIVITY	Payroll Per Employee	Dollar Value of Investment
SINGLE FAMILY DWELLINGS	15.80	101.20
MULTI FAMILY UNITS	20.70	162.70
RESIDENTIAL REHAB	19.30	77.00
RESIDENTIAL/HEALTH RELATED	20.30	187.70
WATER SYSTEMS	24.40	174.20
SEWER SYSTEMS	24.40	174.20
HIGHWAYS AND STREETS	24.80	124.90
SENIOR CENTERS	23.60	187.70
EDUCATION	21.70	187.70
OTHER	23.60	187.70

Data presented above is used in concert with the program expenditures. For example, when \$101,200 was spent for single-family housing in 1987, one job paying an annual sum of \$15,800 was created. The employee in this 'basic' job then spent his or her income within the local economy, thereby creating non-basic economic activity.

Each of these values is teamed with the respective expenditure level, in real 1987 dollars, to compute basic employment and basic income. The nonbasic/basic multiplier is used to compute nonbasic income effects, and average wages paid to non-basic employees are then used to approximate non-basic employment.

NONBASIC/BASIC MULTIPLIERS

An analysis of 73 industry sectors of Montana's economy was conducted to determine the nonbasic to basic multiplier. The technique applied here was similar to the location quotient definitions presented earlier in this report. However, in order to capture the inter-regional trade activities, the special location quotient methodology was applied using a "minimum requirements" approach. Instead of comparing the state of Montana to the USA, Montana's location quotients were compared with the surrounding states of Idaho, North Dakota, South Dakota, and Wyoming. The

TABLE 16
NONBASIC/BASIC
MULTIPLIERS

Date	REAL INCOME
1985	0.691627
1986	0.686350
1987	0.670256
1988	0.672880
1989	0.659809
1990	0.645440
1991	0.657891
1992	0.688442
1993	0.696740
1994	0.721176

state with the lowest location quotient for a specific industry is considered the minimum; any state having a location quotient greater than the minimum is assumed to be exporting a portion of that industry's output. Table 16, presents the nonbasic/basic multipliers for the 1985 through 1994 period. For this analysis, the 1995 multiplier is held constant from 1994.

Once nonbasic income is computed from the nonbasic/basic multiplier, as applied to the estimate of basic income, non-basic employment can also be estimated from average real wages paid. These values are presented in Table 17, at right. Note that real wages per nonbasic employee are falling. The reason for this is the rapid expansion of lower wage jobs, such as retail and service; this was discussed earlier in this report.

1993	15,188
1994	14,896

MODEL ASSUMPTIONS

Several assumptions were used in computing impacts associated with the economic benefits analysis. Each of these, if not previously addressed in the narrative, is itemized below.

1. Seventy five percent of CDBG rehab expenditures are considered equal to assessed value. 100 percent of new construction is assumed as equal to assessed value. No distinctions are currently made between single-family and multifamily homes. All are considered single-family.
2. 100 percent of HOME funds used to fund privately owned projects are assumed to be equal the assessed values. 50 percent of public and non-profit facilities funded by HOME are assumed to equal assessed value. This latter data is to represent fees paid in lieu of taxes.
3. Home acquisition is assumed to have impacts on the same scale as residential rehab. However, it is assumed that 80 percent of the MBOH loans used for existing housing structures are used to build new or remodel existing homes. The remainder immediately leaks out of the state as the home seller retires or otherwise departs with the sale receipts.
4. The Low Income Housing Tax Credit is assumed to be sold on the open market for 55 percent of its accumulated ten-year face value. These funds, all of which are acquired in the first year, are then used to acquire/rehab existing housing or build new construction housing, depending which project type was awarded the Credit.
5. All housing units that pay property taxes, or fees in lieu of taxes, are assumed to continue paying these fees each year (at that year's effective property tax rate). The pool of properties once funded by these programs has grown over time. Property upon which expenditures were made are assumed to increase in value at a rate equal to inflation. In other words, a constant real dollar amount. This is why in some years, 1995 in particular, when no expenditures are made, property tax benefits are still evident.
6. Income tax rates for 1993 are used for 1994 and 1995 estimated tax payments. Payments are made by the Montana Adjusted Gross Income (MAGI) category. It is assumed that each worker

only has earned income, which is equal to the MAGI. Therefore, these workers, as taxpayers, are equal to the average Montana taxpayer within the respective MAGI category

7. Property tax rates for 1994 are held constant for 1995.
8. All income, income taxes, and property taxes are expressed in real 1987 dollars. The deflator used is the fixed weighted price index for personal consumption expenditures; real wage rate and tax rates assumed the same deflator for 1995 as for 1994.
9. All Administrative Fees are assumed to have basic and non-basic income and employment impacts. Section 8 and HOME Tenant Based Rental Assistance, while having basic and non-basic income effects, have only non-basic employment impacts.
10. No infrastructure project pays property taxes.

FINDINGS OF ECONOMIC BENEFITS

The following 12 tables (Tables 18 through 29) present the results of the economic benefits analysis. These findings are a total of all programs added together, and then individual programs, or pairs of activities within the programs. For the purposes of this presentation, basic and nonbasic income have been summed together, as have both basic and nonbasic employment. All dollar values are expressed in current dollar amounts--that is, with inflation included. Lastly, all property taxes paid by properties either purchased or placed in service accrue over the analysis period.¹⁴

1995	73,354,771	24,115,390	1,092	702,747	8,202,365

Table 19, above, shows the Montana Board of Housing Single Family Loan Program activities over the 1985 through 1995 period. This is the single largest MDOC player in the Housing market, expending over \$480 million dollars over this 11-year period. This program accounts for two-thirds of these program impacts on employment and over 50 percent of the income impacts. In 1995, the program is anticipated to directly and indirectly cause the employment of 1,092 persons.

Table 20, presents the impacts associated with tenant-based housing assistance. This is primarily the Section 8 housing program administered by the MDOC. Small amounts of tenant-based rental assistance from the HOME program are included in 1993 and 1994 (\$26,485 and \$9,487, respectively). Note that these income transfers, while basic, do not have basic employment, just nonbasic impacts.

Table 21, below, presents the impacts associated with the Low Income Housing Tax Credit. "Nominal Expenditures Current \$," represents the total amount granted for each credit. These credits last 10 years; therefore, the \$356,427 granted in 1995 is also credited for ten more years. Too, the \$615,664 granted in 1987 was granted each year, for 10 years. However, these credits are typically sold in the commercial market for 55 percent of their 10 year accumulated value. This latter value is used as the economic stimulus and is assumed spent in the initial year the credit was granted. In 1994, this program caused 108 jobs to be formed, with about 2.3 million in income.

The CDBG program also expends funds for infrastructure. The following tables present this data. Table 25, above, shows the income and employment effects for water and sewer projects. Generally, these types of projects have somewhat higher paying jobs, thereby resulting in lower employment. The 1993 and 1994 program expenditure values are estimated.

Tables 26 through 28, present six types of infrastructure expenditure: solid waste, storm sewer, residential/health related, senior center, education, and a miscellaneous category containing all other forms of CDBG expenditure. Together, these categories have created about 20 jobs.

SUMMARY

Housing and infrastructure program expenditures made by, or through, the MDOC have had significant economic benefits to the State of Montana. The total number of jobs created in 1994 was 1,043. In 1995, 1,614 jobs were created. Incomes generated were \$36.7 million and \$47.7 million, respectively. It is estimated that nearly \$1 million is to be paid to the state in income taxes in 1995. Further, the State is now enjoying nearly \$8.5 million in property taxes, accumulated over the 1985 through 1995 period.

C. SOCIO-ECONOMIC AND DEMOGRAPHIC PROFILE

1. SOCIOECONOMIC DATA

POPULATION

Between 1980 and 1990, Montana's actual population changed very slightly, rising from about 789,000 to 799,000. As seen in Table 30, Montana's experience in the 1990's is shaping up to be very different.

In the four years from the 1990 census to 1994, population has expanded by nearly 57,000 persons. This is an annual rate of 1.74 percent per year. However, population growth is very uneven throughout the state. Cascade County, for example, has expanded at only 1.1 percent per year. The strongest areas of growth are Ravalli (5.2 annual growth rate), Gallatin (3.4), Flathead (3.2), Lewis and Clark (2.1), Missoula (2.1), and Yellowstone Counties (2.0). Areas in the more rural parts of the state, such as Chouteau, Deer Lodge, Phillips, Prairie, and Sheridan Counties are still undergoing population declines.

Overall, while Montana's total population is expanding, it is not doing so evenly throughout the state. Diagram 15, shows the entire state's population change over the 1969 through 1994 period.

INCOME

Within Montana, the 1990 per capita income varied widely. According to the 1990 Census, Big Horn County had the lowest per capita income, at \$7,148, and Helena was highest, at \$13,256, as seen in Table 31. The statewide average annual income was only \$11,213. This implies that significant variation in income may occur among households within the state. A more accurate way of inspecting the relative income between areas is to rank the percent of total household incomes below a particular threshold. This is better than just income because it accounts for households with additional wage earners.

Data representing the percent of low income households in each area were computed and ranked. Low income concentrations are designated as areas having a large percentage of households below the statewide low income threshold of \$22,435, which is 80 percent of the state median family income. Census income data is reported by category; \$22,500 is used to approximate the low income threshold. Table 31, presents all areas defined in this way and listed in descending order by percent. Those areas that fall within the low income criteria are listed above the dotted line, starting at Park County. In general, there appear to be very large blocks of the population in low-income households in Montana. Furthermore, as suggested by HUD, those areas having a disproportionate need are those with 10 percentage points above the average; this is 59.06 percent. Those areas above the line under Golden Valley are areas having disproportionate need. Wheatland County has the highest percentage of households in the low income category, with over 65 percent of the households. Only one area, Helena Valley Northeast CDP, has less than 25 percent of its households in the low income category. Given these facts, large sections of Montana can be considered low-income areas.

TABLE 31
LOW INCOME CONCENTRATION - 1990 CENSUS

AREA NAME	LOW INCOME HOUSEHOLDS	PERCENT LOW INC HOUSEHOLD
Wheatland County	666	65.93%

Table 32, on the following page, presents the actual number of households within each income category throughout the state. Overall, Montana has 49 percent of its households making less than 80 percent of the state's median family income in 1989. Furthermore, a whopping 75 percent of Montana households made less than the national average median family income of about \$36,000 in 1989.

POVERTY

The US Department of the Census, Bureau of Economic Analysis, conducts intercensal surveys to estimate poverty throughout the United States. The most recent survey was conducted earlier in 1995. Results of the recent BEA survey indicate that poverty has declined to 14.5 percent of the population, down from 15.1 percent.

As noted in Table 33, Montana's poverty population was 124,853 at the time that the Census was taken, or 15.6 percent of the state's population. These counts were distributed among married couple families (6.4 percent), other types of families (4.5 percent), and unrelated individuals (4.7 percent).

However, the 1995 BEA survey population comprised a sample of only 60,000 households. While this number is valid for the nation, its pertinence and relevance to the state of Montana is highly questionable. The following narrative will substantiate this assertion.

Over the last six years, the number of average monthly household cases receiving food stamps in Montana has risen from 21,088 to 27,605.

Montana	56,260	55,983	59,855	64,608	69,844	71,130

This is an annual growth rate of 5.5 percent per year. The number of individuals receiving food stamps has grown from 56,260 per month to 71,130 persons per month, an average rate of growth of 4.8 percent per year. This data is presented in Tables 34 and 35, above. As the number of food stamp recipients has increased, the average benefit per household has been shrinking.

2. DEMOGRAPHIC DATA

RACE

Montana is generally a racially homogeneous state, with almost 93 percent of the population being white. Native Americans make up about 6 percent of the population, with blacks comprising ¼ percent and Asian/Pacific Islanders and Other races each comprising about ½ percent. Table 36, at right, presents the 1990 Census count of population by race and by relevant area designation. Note that some data in the FY95-99 Consolidated Plan has been modified so that all "county" areas include only non-city and non-CDP areas; cities and CDPs have been subtracted from the county total data.

As seen in Table 36, Native Americans comprise the second largest segment of the population; the majority reside on Montana's seven Indian reservations. These include the Blackfeet, the Rocky Boys, the Fort Belknap, the Fort Peck, the Northern Cheyenne, the Crow, and the Flathead Indian reservations. Areas having tribal organizations can have very high Native American concentrations. For example, Glacier County has the largest number of American Indians, who make up 56 percent of the county's population.

Table 37, presents the state's minority populations ranked by percent concentration. Areas of high racial minority concentration are defined as those exceeding 12 percent, which is twice the state's average percent of the largest minority population, Native Americans. By this definition, Glacier, Big Horn, Roosevelt, Blaine, Rosebud, Lake, and Hill counties have the highest concentrations of Native Americans.

Montana	741340	2047	4256	47574	3848	799065

All are areas with tribal lands. However, Indian reservations are not an explicit part of the state's CPS process at this time. Reservations receive their own formula allocations and are required to prepare their own planning documents.

As an interesting anecdote, the Malmstrom AFB CDP area has the state's highest concentrations of other minority populations, where 8.4 percent are black and another 4.3 percent are Asian or Pacific Islander. This is due to the military installation there. No other area in the state has a black racial concentration above 1 percent. Bozeman has the next highest racial minority concentration: Asian or Pacific Islanders at 2.05 percent.

ETHNICITY

Hispanic ethnicity concentrations are quite low in Montana. The 1990 Census indicates that the state has an average Hispanic concentration of only 1.5 percent. HUD guidelines call for identification of areas of ethnic concentration. Using Montana's previous CHAS definition for concentrations (in this case, twice the state's average ethnicity, or 3 percent), one sees that few areas fit the description. Table 38, presents this data. Only two areas in Montana have relative concentrations of Hispanic people, Malmstrom AFB and Lockwood CDP.

MINORITY RACE AND INCOME CONCENTRATIONS

In accordance with HUD proposed rules, disproportional need computations are required. According to HUD's proposed rules, disproportionate need occurs when the percent of persons in the subcategory is 10 percentage points higher than the percent of persons in the category as a whole. In certain areas of Montana, minority needs are disproportionately high when using this calculation. In the state, Native Americans are by far the largest minority group, having nearly 6 percent of the population. Native American households also make up 4.36 percent of the total households in the state. For members of this group falling into in-need groups, such as very low or extremely low

income, a percent of households in excess of 14.36 percent are considered in disproportionate need. Tables 39 through 46, on the following pages, list the areas of disproportionate need for Native Americans households by county. Tables 39 to 42 refer to renter households, Tables 43 to 46 include owner households.

The purpose of these computations is to identify areas of disproportional concentrations, thereby inferring degree of need. Once completed, such data is intended to guide strategy formulation and policy decision making. However, data included in these tables is sometimes misleading for two reasons. Some counties have very low numbers of persons in an income category and in-need group (e.g. very low-income large related renter households). In these areas, if *any* Native Americans were in that grouping, the percentage would reach 100 percent. As well, several county areas have tribal lands; as such, high Native American concentrations

would indeed be the expected norm, rather than the exception. Explicit identification of geographic areas falling under the domain of the State of Montana and its Consolidated Plan and the Tribal Lands, and their respective housing and community development plans, is therefore somewhat clouded. Hence, explicit policy conclusions cannot be drawn directly from these data alone.

GENDER

Montana is in essence a gender-balanced state, with about 49.5 percent of the population male, and 50.5 percent female. The major cities tend to have slightly more females than males, and the rural areas tend to have more males. Diagram 16, at right, portrays the area distinctions.

AGE

The largest segment of the population is the young, from 0 to 18 years of age. This group comprises 29.3 percent of the total population. However, the population of Montana is somewhat older than that of the nation as a whole; the 1990 median age in Montana was 33.8 while the national median age was 32.9. The elderly (60 years of age and older) also have a significant representation in the age distribution of Montana, at 17.6 percent. Diagram 17, at right, presents the statewide age breakdowns. Table 47, presents area age cohorts.

The 35-44 group follows as the third largest age class in the state, at 16 percent. The 25-34 year old group has 15.5 percent, the 45-60 group has 14.5 percent, and the 19-24 year old group has the smallest representation, with 7.2 percent of the total population.

POPULATION DISTRIBUTION

Sixty-five percent of Montana's population resides in small towns and rural areas of the state. The two entitlement cities,¹⁶ Billings and Great Falls, have over 17 percent of the state's population, with the other major cities combined containing about 12.7 percent of the total population. The population residing in areas surrounding the larger cities (i.e., CDPs) comprises 5.7 percent of the state population. These figures are displayed in Diagram 18, at right.

**DIAGRAM 18
DISTRIBUTION OF POPULATION BY AREA
1990 CENSUS**

HOUSEHOLDS, FAMILIES, AND HOUSEHOLD SIZE

There were 306,919 Montana households reported in the 1990 Census. For this report, households have been distinguished according to the following types: individual households, family households, elderly individual households, elderly family households, and two or more person non-family households. The fundamental distinction between these household types is their housing size requirements. A further distinction is made between elderly and non-elderly households.

The predominant household type in Montana is the family household, which represents 51 percent of all Montana households. Two-person households without children also represent a large household group, followed by single households. All remaining households types represent 40 percent of the population. Just as the elderly represent a significant portion of the population, they represent a significant portion of Montana's households. Of all households in the state, about 30 percent are elderly households. Accordingly, elderly families occupy over half of the two-person households in the state and just under half of all one-person households. Data representing all the state areas for family households, urban, rural, and total households is portrayed on the following page in Table 48.

¹⁶ An entitlement city is defined as a metropolitan area with a population of 50,000 or more people. Entitlement cities submit their own Consolidated Plan Submissions.

FAMILIES

Of the 211,650 families in Montana, 61.5 percent live in rural areas. Montana families are generally headed by married couples. The number of households headed by single persons is significant and is of particular importance in a discussion of affordable housing. Married couples represent 83.4 percent of the state's family types. Of the married couples, 48.6 percent have children, while 51.4 percent have no children. Elderly families, which generally consist of only husband and wife, comprise a large portion of the married couples with no children. The concentrations of couples is higher in rural areas of the state. Conversely, there are higher concentrations of households headed by single persons in the major cities.

There are currently 35,139 family households in Montana headed by single persons. This represents nearly 17 percent of the family households. Seventy-one percent of these households have children present. Furthermore, 75 percent of these households are headed by single women who are generally more likely to have children than single men.

HOUSEHOLD SIZE

Household size also varies significantly throughout the state. Diagram 19 presents households separated by the number of people in each household. Note that the two largest groups of households are one- and two-person households. The number of persons per household ranges from a high of 4.12 at Malmstrom Air Force Base CDP to a low of 2.27 in Kalispell. Montana has an average of 2.60 persons per household. Specific area data relating to household size by number of persons per household is presented in Table 49, on the following page.

DIAGRAM 19
HOUSEHOLDS BY PERSONS PER HOUSEHOLD
1990 CENSUS

RENTERS AND HOMEOWNERS

Just over 67 percent of Montana's occupied housing units are occupied by their owner (owner occupied); the remaining 33 percent are renter-occupied. The rate of home ownership is much higher in the rural areas of the state (72.6 percent) than in the major cities (only 59.8 percent). As is true of the nation as a whole, the largest single group of homeowners in Montana is the elderly. Of all the owner-occupied units in Montana, 26.4 percent are occupied by those 65 years of age and older. This is true of both the major cities and rural Montana.

Overall, the 35-44 age group has the second highest rate of home ownership in both rural areas and in major cities. The total number of housing units was 361,155 according to the 1990 Census; over 15 percent of the units were vacant. Diagram 20 displays the number of households, by ownership status, in each of the three geographic area designations addressed herein. Area statistics that describe homeowners and renters are presented in Table 50.

The people most likely to rent in Montana, in both rural areas and in major cities, are in the 25-35 age group. Given that people in this age category are more likely to live in the cities and occupy an individual unit, and that home ownership is less affordable in the major cities, there is an indication of a need for assistance to young adults who are first-time buyers in acquiring a home. Those least likely to rent are in the 45-54 year old group.

SUMMARY

Between 1980 and 1990, Montana's population did not rise appreciably, increasing only by about 12,000 people. The number of households rose more due to fewer persons per household rather than from an increase in the population. However, between 1990 and 1994, over 57,000 people have moved into the state. This is the greatest rate of growth in over 25 years.

In regard to Montana's demographic complexion, the population is predominately white. Native Americans, the state's largest racial minority, are highly concentrated in areas with tribal organizations. However, the tribal organizations typically have their own housing operations and are considered outside the scope of the state CPS development process and priority enumeration. Native American concentrations in areas of the state directly addressed by Montana's CPS are included herein, but available data does not distinctly identify the areas. There is little minority Hispanic concentration in Montana.

Economic conditions all across Montana have resulted in lower average real rates of pay over the last 25 years. Montana's wage earnings may be less than in 1969. Today, unemployment rates have eased significantly. One sees persistence of low income households and vast sections of the state that can be considered low income. Nearly 50 percent of all households reported income of less than \$22,500 in 1989. This is significantly lower than the national median family income, which was nearly \$36,000 in 1989. Over 80 percent of all Montana households are below the national median family income; and, household and households receiving food stamps has shot up over the last five or six years. Furthermore, it is becoming increasingly difficult for Montana's first-time home buyers to complete a transaction, as the prices of homes are increasing faster than interest rates are falling.

D. HOUSING MARKET ANALYSIS

1. HOUSING ATTRIBUTES

TYPES OF HOUSING

Single-family detached units are the predominant housing type in Montana. They comprise 65.6 percent of the state's total units. Multifamily units, with two or more units, represent the second largest group, at 18.3 percent. Mobile homes comprise 15 percent of the total housing units. The diagram at right, presents the percent of each housing type in the state. However, the presence of each housing type varies significantly around the state. For example, rural Montana has a higher concentration of single-family units than the major cities; these areas also have more mobile homes than the major cities. Needs for housing around the state will vary depending upon the predominance of various housing types. To better view the large variations from area to area, data on housing type for all geographic regions is presented in Table 51, on the following page.

DIAGRAM 21

AGE OF HOUSING STOCK

According to the 1990 Census, nearly 27 percent of Montana's dwelling units were constructed between 1970 and 1980. Another 21 percent were constructed prior to 1940. Homes built before 1940 have some potential for structural problems related to inadequate foundations and floor supports, poor plumbing, outdated electrical wiring, and substandard roofs. Because of this, pre-1940 housing tends to need moderate rehabilitation. Other prospective environmental hazards exist; these will be discussed shortly. Diagram 22 displays the percent of occupied units in each housing age category.

DIAGRAM 22
AGE OF OCCUPIED HOUSING UNITS
1990 CENSUS

Large discrepancies underlie the statewide average in quality of housing construction. Areas of the state have lost population. This implies a shortfall in housing construction and increases the potential for a more hazardous housing stock. Table 52, presents occupied housing vintage by area.

DIAGRAM 23
AGE OF VACANT HOUSING STOCKS
1990 CENSUS

Still, over 15 percent of Montana's housing stock was listed as vacant in the 1990 Census. This includes for-sale properties, available vacant rentals, second homes, or vacation homes. Diagram 23, shows the vintage categories for the vacant homes. It appears that age of housing plays a large role in whether the home is vacant, with over 26 percent of vacant homes being 50 years of age or older. Census data indicates that a large percent of vacant homes exist in the rural and less densely populated areas of the state. A much larger percent of vacant homes have missing or incomplete kitchen and plumbing facilities, and over 35 percent of the vacant housing stock in Meagher County lacks adequate plumbing. A portion of these homes is projected to be lost through demolition and abandonment. The extent of such losses (and other unsuitable housing conditions) on local housing stock varies widely around the state. The number of vacant homes, by age, is presented in Table 53.

For respondents to the 1993 *Montana Housing Survey*,¹⁷ the average dwelling was built in 1958. However, there was great variability depending on the type of home and whether the home was owned or rented. Diagram 24, at right, presents some of this data. Single-family dwellings averaged slightly over 38 years old. Rental units were typically older than owner-occupied homes. There was an 11-year difference between the single-family rental homes (average 48 years) and owned homes (average 37 years). When the single-family home is owned, it tends to be newer than when rented.

**DIAGRAM 24
AGE OF HOMES
MONTANA HOUSING SURVEY**

HOUSING SIZE

Of the 361,000 housing units in the state, most are two or three bedroom units. However, 2.4 percent have no bedrooms, and another 4.7 have five or more bedrooms. Diagram 25 graphically portrays the size of Montana's housing stock by number of bedrooms. Detailed area data from the 1990 Census are presented on the following page in Table 54.

**DIAGRAM 25
UNITS BY NUMBER OF BEDROOMS
1990 CENSUS**

¹⁷ The 1993 *Montana Housing Survey* was sent to a random sample of Montana citizens.

DEGREE OF OVERCROWDING

While a wide range of housing sizes is available, there is some incidence of overcrowding, as reported in the 1993 CHAS Databook.¹⁸ Data was extracted from the Databook and is presented for renters, owners, large families, and non-elderly owners, each by income. As seen in Table 55, 3.9 percent of all renters statewide are experiencing overcrowded conditions. However, it appears that several more easterly counties have a significantly higher incidence of overcrowding, Big Horn County in particular. As household income declines, the incidence of overcrowding increases

¹⁸ The CHAS Databook was a publication released by HUD for the Comprehensive Housing Affordability Strategy.

significantly. For example, 75 percent of all very low-income renter households in Petroleum County reside in overcrowded conditions.

When considering large related renter households, the incidence of overcrowding rises significantly. Statewide, over ¼ of all large related renter households face overcrowded conditions. As noted in Table 55, these percentages jump to 100 percent for several counties. However, these figures pertain to very small absolute population sizes. As inferred from Table 56 Petroleum County has *no* extremely low-income large related renter households.

Table 57 refers to owners, where the incidence of overcrowding statewide is about 1.8 percent. Here, as above, the percentage of households in overcrowded conditions rises as income declines. However, the problem is not as severe with owner groups as with renters. Since many of the owners are elderly, the data was corrected for this group. Table 58 presents data for owners, other than elderly, and their incidence of overcrowding. While the statewide average is only 2.6 percent, some counties exceed 30 percent of the total. Overall, Montana's lower income households, especially in the more sparsely populated areas of the state, tend to have problems with overcrowded housing conditions.

According to the results of the 1993 *Montana Housing Survey*, there was an average of 2.8 occupants among owner-occupied homes. This was slightly more than the respondents from rented dwellings, which had an average of 2.5 occupants. Overcrowding was prevalent in studios, with approximately 2.2 individuals living in this no-bedroom style home. While 57 percent of the studios contained one person, another 42 percent contain between three and five individuals. It should be noted, however, that less than 1 percent of the total sample lived in this type of housing. Diagram 26, at right, shows the percent of units in the 1993 *Montana Housing Survey* with each specified number of bedrooms.

DIAGRAM 26
UNITS BY NUMBER OF BEDROOMS

The problem of overcrowding was difficult to determine because family structures are complex and the size of the house is an important factor. The average one-bedroom dwelling could accommodate two individuals. The survey revealed almost 90 percent of the one-bedroom dwellings contain one to two individuals; 10 percent of the dwellings had three to four individuals living in them. Almost 10 percent of the two-bedroom dwellings contained from four to seven household members.

2. LEAD-BASED PAINT HAZARDS

RENTER AND HOMEOWNER HOUSEHOLDS

Renters and homeowners in the state face prospective hazards relating to lead-based paint. Homes built prior to 1980 have some chance of containing lead-based paint on interior or exterior surfaces. Housing units built before 1940, which make up nearly 22 percent of the housing units in Montana, are much more likely to contain lead-based paint than newer homes.

There is increased medical understanding of the extremely harmful effects of lead on children and adults, both short- and long-term. There is new evidence that lead dust is a more serious hazard than ingestion of paint chips. Dust from surfaces with intact lead-based paint is pervasive and poisonous when inhaled or ingested. Lead dust is so fine that it is not collected by conventional vacuum cleaners.

One can compute an estimate of the number of housing units at risk for containing lead-based paint. According to HUD estimates, 90 percent of units built before 1940, 80 percent of those built between 1940 and 1959, and 62 percent of units built from 1960 to 1979 may have lead-based paint. This computation was applied to all units (occupied and vacant), and is portrayed in Table 59. There are over 220,000 units statewide that are potentially at risk.

for lead-based paint hazards. However, there are two additional risk factors for lead-based paint hazards: tenure (i.e., renter or owner) and income of the household.

A few years ago, HUD prepared special tabulations of data for the Comprehensive Housing Affordability Strategy process, as it relates to lead-based paint hazards. The data cross-tabulates tenure, age of unit, and affordability group (very low and other low income). HUD tabulated data on affordability group based on the national median family income (very low income and other low income) rather than exact income (e.g., \$15,000 annually). This data was extracted and calculated using HUD's formula for households at risk of lead-based paint hazards, based on unit age, tenure, and affordability group.

Housing that is occupied by very low income home owners, other low income homeowners units, very low income renters and other low income rent units are most likely eligible for funding under a variety of federal housing programs. For all homeowner households, over 35,645 homes are at risk of some form of lead-based paint hazards. For other lower income households, another 38,045 homes are at risk.

The two factors most highly correlated with the presence of lead based paint hazard are low income and rental properties. For the lowest income renter households, about 37,600 units are at risk. For other low income renter households, another 20,417 are at risk. Together, these figures paint a poor picture for the health and safety of lower income households.

Nearly 131,700 households face potential high risk lead-based paint hazards. The households generally represent those which would qualify under various housing program provisions. The Lead-Based Paint Hazard Reduction Act calls for risk assessments and prospective testing for federally assisted housing. The HOME program estimates, that it may cost an average of \$8,000 per unit to abate lead-based paint hazards. This direct program exposure amounts to over \$1.053 billion.

TABLE 60
LOW INCOME HOUSING UNITS AT RISK OF
LEAD-BASED PAINT HAZARDS

	VERY LOW INCOME	OTHER LOW INCOME	TOTAL LOW INCOME
Renters	37,593	20,417	58,010
Owners	35,645	38,045	73,690
TOTAL	73,238	58,462	131,700

The data presented in Table 60 represents a conservative estimate. HUD counts of low-income housing units built from 1950 to 1959 have been summed with the '1960-79 Housing' category rather than the '1940-59 Housing' category in the 1993 CHAS Databook. It can be assumed, therefore, that a larger number of 1950-59 housing are at risk. As well, when one begins to review all at risk housing units (recall that there are in excess of 220,000 units) at \$8,000 abatement costs, potential housing rehabilitation needs mushroom to \$1.76 billion. Even if full lead-based paint abatement does not occur, and only in-place containment activities are implemented (this costs 25 percent of the average abatement cost, or \$2,500), this still exceeds one half billion dollars, a staggering amount of money.

RESULTS OF LEAD TESTS ON CHILDREN

The State Advisory Committee of the Montana LEAD program provided statistics showing the results of all tests done by the Montana Childhood Lead Poisoning Prevention Program, up to May 4, 1994. It includes both children and adults, and includes repeat tests. Table 61, presents the accumulated data for children age 5 and under. HUD's newly revised definition of elevated blood level is 20 $\mu\text{g}/\text{dL}$ in a single test or 15 to 19 $\mu\text{g}/\text{dL}$ in two consecutive tests. The data presented in Table 61 uses measurements of over 10 $\mu\text{g}/\text{dL}$ to define an elevated blood lead level.

TABLE 61
BLOOD LEAD LEVELS
CHILDREN AGE FIVE AND UNDER, TOTALS TO 05/04/94

CITY	NUMBER TESTED	NUMBER ELEVATED ($\geq 10 \mu\text{g}/\text{dL}$)	PERCENT ELEVATED
Butte	701	66	9.4%
Great Falls	557	19	3.4%
Missoula	531	11	2.1%
TOTAL	1,789	96	5.4%

Table 62 includes data from the Montana LEAD program, current up to October 6, 1994. The information was provided in lieu of data on addresses of lead-poisoned children, which was not released due to confidentiality concerns.¹⁹

¹⁹ Montana LEAD screening statistics were provided by Karen Byrnes, Data/Fiscal Manager, Montana Lead Education Assessment Detection, correspondence of October 24, 1994.

TABLE 62
BLOOD LEAD LEVELS
STATEWIDE, CHILDREN < 6 YEARS OLD

BLOOD LEAD LEVELS	NUMBER OF TESTS	PERCENT
< 10 $\mu\text{g/dL}$	3,433	91.6%
$\geq 10 \leq 14$ $\mu\text{g/dL}$	239	6.4%
$\geq 15 \leq 19$ $\mu\text{g/dL}$	54	1.4%
≥ 20 $\mu\text{g/dL}$	20	0.5%
TOTAL	3,746	
TOTAL ELEVATED (≤ 10 $\mu\text{g/dL}$)		8.4%

Montana does not currently have a funded lead compliance program to address the accreditation of individuals engaged in lead hazard identification or reduction activities the accreditation of training programs for these individuals, or the certification of contractors engaged in lead based paint related activities. A proposal for a Montana Lead Abatement Project was submitted HUD under its Title X Lead-Based Paint Hazard Control Program. Unfortunately, Montana did not receive funds for this application.

3. CONDITIONS OF HOUSING STOCK

DATA REGARDING PHYSICAL CONDITIONS OF HOUSING STOCK

Available data suggests that there are both moderate and severe physical problems in Montana's housing stock. Statewide, 8.5 percent of the stock lacks sufficient kitchen or bathroom facilities. Table 48, on the following page, depicts the condition of housing as it relates to incomplete kitchen and bathroom facilities on a detailed area basis. Several rural counties have over 30 percent of their stock in substandard condition, including Judith Basin (34.7 percent), Meagher (35.1 percent), and Mineral (30 percent) counties. Housing stock in substandard condition in Petroleum County surpasses 27 percent, Phillips County is nearly 23 percent, and Broadwater County exceeds 20 percent. This implies that many of the structures throughout the rural portions of the state may require rehabilitation and repair.

ASSESSMENT OF HOUSING NEEDS

During the FY94 CHAS development process, three mail surveys were conducted²⁰. One was sent to a systematic sample taken from the FY93 CHAS Annual Plan distribution list. This survey is termed the *Survey of Montana's Housing Needs*. The second was sent to a sample of randomly selected Montana households. The latter survey was designed to adequately sample middle income households. This would then over sample low- and very low-income households, thereby under sampling wealthier households. This comprised a sample of about 3,650 households across Montana. This instrument is termed the *1993 Montana Housing Survey*. Both of the above instruments, along with cover and follow up letters, were included in the FY 1994 CHAS. The third survey was conducted by the Housing and Community Development Bureau of the Montana Department of

²⁰ Copies of the three survey's: The *Survey of Montana's Housing Needs*, the *Montana Housing Opinion Survey* and the *1993 Montana Housing Survey* may be requested from Department of Commerce, Housing Division (406) 444-0092.

Commerce and focused primarily on land-use and zoning. The *Montana Housing Opinion Survey* sampled about 300 persons and is summarized below as well.

SURVEY'S PERFORMED

The *Survey of Montana's Housing Needs* was designed to collect specific data such as vacancy rates, local needs, and barriers to affordable housing from knowledgeable housing specialists throughout Montana. Most of the quantitative questions asked the respondents to rank the degree of housing problem or need. There was also a series of questions related to the inventory of homeless facilities and services. The survey also included a set of open-ended questions soliciting general responses. Survey data is reviewed below.

The housing needs survey solicited input from a very broad cross-section of Montanans involved in housing issues, from construction, sales, lending, program administration, planning, and public policy occupations. It also included responses from state and local agencies associated with health, environmental services, disability, public instruction, Native American affairs, councils on aging, low income coalitions, and others.

The Survey of Montana's Housing Needs indicated several distinct problems and a variety of options for overcoming deficiencies in the provision of affordable housing. These findings can be summarized as a critical shortage of rental housing and a severe shortage of owner-occupied homes. All income groups are adversely affected, with low-income persons being placed in the most compromising circumstances. In-needs groups are scattered statewide, but the elderly and handicapped have the highest incidence of need. There tends to be a high level of unsuitable homes and rental property as perceived by the public.²¹ In addition, both rental housing and owner occupied homes are not very accessible for Montana disabled citizens. Further, the in-need groups are specifically the homeless, the elderly, and the mentally or physically disabled. Since the incidence of AIDS/HIV infection is relatively low in Montana, the public perceives little need for this type of housing and housing-related services. However, within local jurisdictions, these needs can contrast sharply. Also, rental and home prices are increasing significantly, with building and zoning practices affecting housing availability in areas with faster growing populations and active subdivision and zoning activities.

Few opportunities exist today for increasing the provision of affordable housing, but many barriers exist. These barriers include land prices, material costs, population migration, and zoning regulations. Service gaps exist. These relate to programs that provide additional support to the in-need groups. These service gaps can be partially addressed through current delivery systems, but most sources are under-funded.

The *Montana Housing Opinion Survey* also conducted in 1993, confirmed the previous survey analysis. Rental housing is critically short throughout the state, and owner-occupied homes are not affordable. Furthermore, developers are largely uninterested in providing low-cost housing,

²¹ In general, Montana citizens take a more critical view of suitability than the CPS definitions.

whether for rent or purchase. Respondents indicated similar causes for the high cost of housing, such as building materials and land costs. Other indicators contributing to the lack of affordability are related to low paying jobs, an inability to meet credit requirements, and an inability to save for down payment and closing costs. The survey respondents indicated that prospective solutions relate to low cost financing, rent and home subsidies, and assistance to builders and home buyers.

The *1993 Montana Housing Survey*, through the canvassing of randomly selected citizens, revealed findings similar to the above two needs assessment results. There are critical shortages of rental housing, and severe shortages of affordably priced homes. There are significant needs for program support for the creation of low-cost rentals and affordably priced homes. Even Montana's Section 8 waiting list concurs with the above, as over 6,000 are now on the list, which is expected to rise to about 10,000 over the course of the next few years.

STATE-ADMINISTERED SECTION 8 HOUSING

An indirect measure of housing affordability and availability can be found by inspecting the Section 8 rental assistance waiting lists. In Montana, the list was last prepared on October 11, 1995. The table at right, presents the number of households on the waiting list at that time. Of those on the list, about 55 percent have one or more federal preferences. The complexion of the list is simply dependent upon those who apply.

STATE-ADMINISTERED SECTION 8 WAITING LIST	
BEDROOMS	NUMBER ON WAITING LIST
1 Bedroom	2,635
2 Bedrooms	3,821
3 Bedrooms	1,630
4 Bedrooms	199
5 Bedrooms	17
6 Bedrooms	2
TOTAL	8,304

Increases in number of families on the list imply that the housing market is not providing enough affordably priced rental property to adequately handle demand and household formation. This leads to further pressure on rental prices.

HOUSING NEEDS FOR LARGE FAMILIES

Around the state of Montana, there appears to be an incidence of overcrowding; this is especially true for large related family households. While the incidence of overcrowding in all renter homes in Montana amounts to only 3.9 percent of households, this share expands to 26.7 percent of all large related families having overcrowded conditions. The extremely low- and very low-income large related households have an incidence of over 38 percent of all these households in crowded conditions. Large family homes are a pertinent need in Montana.

SUITABILITY CRITERIA

The aggregate number of housing units experiencing some form of substandard condition is not small. Since several segments of the population tend to be experiencing a disproportionate share of severe and adverse housing conditions, the State offers suitability criteria to use when making policy options designed to alleviate substandard conditions for tenants and homeowners.

Substandard housing conditions are those requiring critical repairs to ensure that the unit will not endanger the health, safety, or welfare of its occupants. At a minimum, the unit should meet Section 8 Housing Quality Standards, in order to be considered suitable housing.

SUITABLE FOR REHABILITATION

Substandard dwelling units may still be suitable for rehabilitation. These types of units must be both financially and structurally feasible for rehabilitation. Most government funding programs will not allow funds to be invested in housing units that require only cosmetic work, correction or minor livability problems, or maintenance work. The units must be designed for year-round use. This means that construction and heating of the unit should make it usable for year-round occupancy: built as a permanent structure, properly equipped and insulated for heating based on the climate, and have heating equipment adequate for long cold periods.

NOT SUITABLE FOR REHABILITATION

Unfortunately, not all substandard units are in good enough condition to rehabilitate in a safe and cost-effective manner. Others may not be properly designed. The latter includes dwelling units that were not designed for year-round use, not built as a permanent structure, not properly equipped and insulated for heating based on the climate, and without heating equipment adequate for long cold periods.

Substandard housing units that are neither structurally feasible nor financially practical (i.e., cost effective) for repair and rehabilitation are considered substandard housing units unsuitable for rehabilitation and unsuitable for habitation by any in-need group.

4. AFFORDABILITY AND COST BURDEN

In assessing whether or not there is affordable housing available in Montana, both income levels and housing costs have been inspected.²² A monthly housing cost (including utilities) in excess of 30 percent of income constitutes a cost burden. Approximately 18.6 percent of Montana households (59,217) earn less than \$10,000 annually, and 32.1 percent (98,548) earn less than \$15,000. Therefore, a monthly housing cost in excess of \$250 represents a cost burden to nearly one-fifth of Montana households, and payments over \$375 would be a burden to nearly one-third. The following analysis examines the affordability of housing to renters by looking at the percentage of monthly income that would be required to make average rent and utility payments.

Affordability for potential homeowners is examined by looking at the cash outlay and annual income required for average and low priced homes if monthly housing costs are to equal 30 percent of income. These calculations are intended to reflect the typical costs. Costs and income requirements are shown for both conventional financing and Federal Housing Administration (FHA) or Rural Economic and Community Development Services (RECDs), formerly Farmers Home

²² Income and housing cost data taken from the 1990 Census, U.S. Department of Commerce, Bureau of the Census.

Administration (FmHA), financing. These cost burdens and income requirements are then compared to census information to see how many households in Montana can afford the average home.

Rent burden calculations were made using 1990 Census figures for contract rent. For home buyers, the calculations for monthly mortgage payments and cash outlay at closing were made by using 1990 Census figures for the average asking prices of vacant for-sale housing units, prevalent interest rates in 1992, and applying formulas used by the banking industry, RECDs and FHA.²³ For conventional loans, cash outlay at closing includes a 10 percent down payment plus typical closing costs.²⁴ The RECDs Administration (who makes loans in rural areas with populations of less than 10,000) estimates no cash outlay of closing costs or down payment, and assume only typical RECDs closing costs.²⁵ For FHA, cash outlay at closing includes a 3 percent down payment plus 43 percent of closing costs. The other 57 percent of the closing costs and the required mortgage insurance costs are added to the loan amount.²⁶ Monthly payments for all loans are based on a 30-year, 9 percent fixed-rate loan plus taxes and insurance. Average utility costs of \$101 per month for a two-bedroom, multifamily unit with electric heat have been added to rent cost to calculate cost burden for rental units. Utility costs of \$125 for a single-family, three-bedroom home with gas heat were added to the monthly mortgage payments to calculate income requirements for homeowners.²⁷

AFFORDABILITY FOR RENTERS

Low-income renters in Montana's rural areas are less likely to experience severe cost burden than low-income renters in the state's major cities. Households earning \$10,000 or less annually would be paying at least 52 percent of their income to occupy an average housing unit in the major cities. This constitutes a burden far in excess of the 30 percent standard. Similarly, in census designated places, a household with a \$10,000 annual income would have to use 55 percent of their income to rent the average housing unit. The situation for that income group is of particular concern in the Sun Prairie CDP, where the renter cost burden is highest, at 65 percent for the average rental housing unit.

²³ While interest rates have fallen since 1992, home prices have risen faster since 1990, thereby making home affordability more difficult. Hence, this narrative is simply a conservative illustration of the problems, rather than a precise quantitative estimate, current to December 1993.

²⁴ Typical closing costs estimated with the assistance of Colleen Cebula, First Interstate Bank of Missoula. (1992)

²⁵ Information on Farm Home Administration loans and typical closing costs provided by Peter Halvorson, Farm Home Administration Office, Hillsboro, Oregon; and Nikki Stahley, Farm Home Administration Office, Billings, Montana. (1992)

²⁶ FHA loan information and typical closing cost estimates provided by Jeff McKinnen, First Interstate Bank, Portland, Oregon; and Charlene of American Federal Savings & Loan, Butte, Montana. (1992)

²⁷ Section 8 Utility Allowances, revised October 1992.

TABLE 63
AFFORDABILITY OF AVERAGE RENTAL UNITS

AREA	MONTHLY RENT	PERCENT OF INCOME	PERCENT OF INCOME
	\$	\$10,000	\$15,000
Sun Prairie CDP Average	543	65%	43%
City Average	436	52%	35%
CDP Average	461	55%	37%
Rural Average	331	40%	26%

Table 63, illustrates the cost burden of average priced rental units in cities, CDPs, and the remaining rural areas. As that table shows, average rent in the rural areas is lower than in urban areas, but it still represents a cost burden of 40 percent to a householder with \$10,000 in income. Even for a household with a \$15,000 annual income, the cost burden is over 30 percent for all but those living in rural areas. Although the cost burden is not severe for that group, the important questions for those rural areas become if there are enough rental units available, if they have adequate kitchen and plumbing facilities, and whether or not they are maintained at or above minimum health and safety standards.

While the above analysis focused on whether low-income households could afford average rents, another question should also be examined: What portion of Montana's population cannot afford the "average rent"?²⁸ Table 64, illustrates average rents, the income needed to pay that average, and the percent of households with an income below \$15,000. As this table demonstrates, 26 to 33 percent of the population in Montana does not have a high enough income to afford the average rent. Furthermore, there is wide disparity between urban and rural costs and cost burdens. Data demonstrating the degree of difference between the various regions throughout the state is presented in Table 65. This data portrays the number of households in each area that fall within a particular rent level category.

TABLE 64
INCOME NEEDED TO PAY THE AVERAGE RENT

AREA	MONTHLY RENT	INCOME NEEDED	PERCENT OF HOUSEHOLDS WITH LESS THAN \$15,000 ANNUAL INCOME
City Average	436	\$17,440	33%
CDP Average	461	\$18,440	26%
Rural Average	331	\$13,240	32%

²⁸ Average rent computed from the number of rental units in each rent cost category and the midpoint of the rent category, as reported in the 1990 Census, plus utility costs used in the Section 8 Housing Utility Allowance Program (revised October 1992).

AFFORDABILITY FOR HOME BUYERS

With respect to affordability, what holds true for renters is generally true for first-time home buyers in Montana. The cost of buying a home in rural Montana is less than it is in the cities and CDPs, although there is some disparity among rural areas in the average values of vacant, for sale homes. Table 66, shows the average values for homes in cities, census designated places, remaining rural areas, and in Gallatin County, which had the highest average home value in Montana according to the 1990 Census. Those average values are used to show costs to first-time home buyers who are able to use conventional financing. Recognizing that many first-time buyers cannot come up with the cash required at closing in order to utilize conventional financing, Table 66 gives some examples of the cash and income requirements for both RECDS and FHA financing.

TABLE 66
INCOME NEEDED TO PAY THE MONTHLY HOUSE PAYMENT
ASSUMES 9 PERCENT FIXED RATE MORTGAGE

AREA	PURCHASE PRICE	DOWN PAYMENT	MONTHLY PAYMENT	MINIMUM INCOME NEEDED	% HH WITH INCOME > \$26,000
Gallatin County	\$82,600	\$11,150	\$886	\$36,400	
City Average	\$67,700	\$9,290	\$760	\$30,000	53.3%
CDP Average	\$60,800	\$8,420	\$690	\$27,600	50.0%
Rural Average	\$49,000	\$6,930	\$580	\$23,200	54.5%
RECDS Financing					
	\$25,000	\$1,010	\$380	\$15,200	
	\$40,000	\$1,170	\$520	\$20,800	
	\$50,000	\$1,310	\$616	\$24,600	
FHA Financing					
	\$40,000	\$1,900	\$540	\$21,600	
	\$50,000	\$2,300	\$640	\$26,600	
	\$60,000	\$2,700	\$740	\$29,600	

Vacancy rates are high in eastern and north central Montana, the average asking price for a vacant, for sale home was under \$26,000 at the time of the 1990 Census. At this rate, a household income of approximately \$15,200 would make a home in those areas affordable if the potential home buyer is able to take advantage of RECDS financing. In rural areas, income may not be a limiting factor.

In the rural regions of south central and southwestern Montana, which have relatively high vacancy rates, an average home was reportedly valued at about \$50,000 in 1990. An annual household income of approximately \$24,000 to \$25,600 (depending on the type of financing available) would generally make a home affordable in these regions. The average asking price of a vacant, for sale home in rural western Montana is generally higher than in other rural areas of the state. In those higher-cost areas, the asking prices were \$60,000 or more, which requires a minimum household income of approximately \$27,000 to \$30,000, depending on the type of financing available.

In the CDPs, the average home value was approximately \$60,800 in the 1990 Census. With conventional financing, the minimum income required to buy that \$60,800 home is \$27,600. Average home value in the major cities is approximately \$67,700, requiring a minimum annual income of approximately \$30,000 if the buyer uses conventional financing. The major cities have comparatively low vacancy rates ranging from 4.0 percent to 10.2 percent as opposed to the rural range of 17.3 percent to 22 percent. This indicates a higher demand for housing in the cities and supports the higher cost of housing in those areas.

It is important to note that while mortgage rates appear affordable to many, especially since interest rates have fallen to as low as 6.5 to 7 percent, one can no longer use census figures for an accurate value of housing sales costs.²⁹ Another difficulty relates to the ability to save for a down payment, which can be a prohibitive factor, especially for the use of conventional financing. While the down payment requirements are lower for FHA financing, monthly payments and minimum income requirements are higher due to the larger loan amount. Also important to note is that the banking industry calculations for minimum income requirements are based on the standard that the total of principle, interest, property tax, and insurance payments cannot exceed 28 percent of gross income. It is also a standard requirement that total monthly obligations (including automobile and credit card payments) not exceed 36 percent of gross income.³⁰ For households whose other monthly obligations exceed 8 percent of gross income, their minimum income required to purchase a home will be higher than indicated in Table 67. All area cost values for owner-occupied homes are presented in Table 67.

Table 67 also lists that portion of total Montana households that earn less than \$25,000 annually. Examining the incomes required if housing costs are not to exceed 30 percent of income, we see that purchasing a home through conventional financing is out of reach for over half of the people in the cities and CDPs. Purchasing a low-priced home becomes more affordable through the use of RECDs or FHA financing and in the rural areas of the state. However, the question again becomes one of whether or not these low-priced (and typically rural) homes are in a good enough condition that they would qualify for either conventional or federally insured financing.

²⁹ It is the opinion of the Montana Board of Housing that housing prices have increased faster than interest rates have fallen, thereby leading to a slowdown in the provision of affordable housing to Montanans and further affordability problems for home buyers.

³⁰ Colleen Cebula, First Interstate Bank of Missoula. (1992)

ADDITIONAL COST BURDEN ANALYSIS

The following analysis examines the affordability of housing to homeowners and renters by looking at the percentage of monthly income that would be required to pay housing and utility costs for two-bedroom accommodations. It is designed to augment the affordability and cost burden discussion included in the FY 1994-98 Five-Year CHAS. That original narrative is still valid, as it utilized detailed 1990 Census data by geographic area, thereby representing a comprehensive analysis. A true update of that analysis to represent data in 1994 is not possible without revised census data. The levels of cost burden and housing cost are out of date because the housing market has changed swiftly in Montana.

The analysis presented here is more qualitative in nature, but it is intended to illustrate conditions being experienced in 1994. It provides an updated look at the cost burden for two-bedroom housing units by using current market prices, quoted interest rates, income estimates derived from the *1993 Montana Housing Survey*, and current Section 8 utility allowances (the estimated costs for the particular type of home for energy, water, sewer, and refuse collection). To iterate, this data is not intended to reflect exact estimates of the cost burden for Montana, but rather to offer relevant information depicting the current housing situation in the state.

COST BURDEN FOR FIRST-TIME HOMEBUYERS

In order to calculate the cost burden for homeowner households, three pieces of data are needed: mortgage payment, utility costs, and income. The current advertised housing prices (asking prices) were collected via random sample of 15 two-bedroom houses advertised for sale.³¹ An average price of \$70,000 was calculated from the sample and assumed to be representative of the cost of a two-bedroom house in the state. In addition, a random sample of banks in Bozeman, Missoula, and Kalispell was queried.³² Loan officers were asked about current market rates, plus points and fees, totalling the monthly payments on a loan for the two-bedroom home. This is a conventional loan with a 20 percent down payment.

In addition, the bank representatives were asked if the market price was a reasonable reflection of the cost of such a house in their own respective areas. Typically, the loan officer put the price of such a house at a higher figure. In those cases, the loan amount was readjusted based on the new figures. The total monthly home purchase payment included the principal, interest, taxes, and insurance. As noted above, when calculating the cost burden, the monthly expense for housing utility costs were included. These latter figures were provided by Montana Department of Commerce, Housing Assistance Bureau.³³

³¹ Sunday Billings Gazette, June-July 1994.

³² The banks contacted were the First Security Banks in Bozeman and Kalispell, First Citizens Bank in Bozeman, and First Interstate Bank and Montana Bank in Missoula.

³³ Figures on utility cost for single-family and multifamily units were provided by George Warn, Montana Housing Assistance Bureau, MDOC. These related to gas space heat and water heat; electric cooking; no air conditioning; and water, sewer, and refuse collection in each of the respective cities.

In order to collect the remaining data required to compute the cost burden, household income figures were drawn from the *1993 Montana Housing Survey*. The incomes were grouped into categories based on the median family income for the state. Table 68, below, describes the four income groups and the ceilings above which a cost burden or a severe cost burden are encountered. For each group, cost burdens were calculated from the maximum income level (or income category ceiling). A monthly mortgage payment (with utilities) in excess of \$350 would therefore represent a cost burden to over one-fourth of the survey's respondents, or about 25 percent of all Montana households.

TABLE 68
INCOME DISTRIBUTIONS FROM THE 1993 MONTANA HOUSING SURVEY
ESTIMATED COST BURDEN

INCOME CATEGORY CEILINGS	PERCENT OF RESPONDENTS	YEARLY HOUSEHOLD INCOME	ESTIMATED COST BURDEN	ESTIMATED SEVERE COST BURDEN
Extremely Low Income	26.7%	≤ \$14,021	> \$350 a month	> \$584 a month
Very Low Income	18.0%	to \$22,434	> \$560 a month	> \$935 a month
Low Income	11.7%	to \$26,640	> \$660 a month	> \$1,110 a month
Other Households	43.0%	≥ \$26,640	NA	NA

Table 69, below, provides the monthly housing payments for a two-bedroom house in three Montana cities. The table shows the monthly payment on a two-bedroom house purchased with a 30-year conventional loan with a 20 percent down payment. The loan is at a current market interest rate of 9 percent. As mentioned previously, the value of a two-bedroom house varied from one area to another, ranging from \$70,000 to \$100,000. A base value of \$70,000 was used, but whenever the loan officer suggested that the cost is higher than this amount, the average market price was based on their revised figures.

TABLE 69
COST BURDEN FOR HOMEBUYERS
TWO-BEDROOM SINGLE-FAMILY HOME

CITY	AVG PRICE/LOAN (\$1,000s)	MORTGAGE PAYMENT/MONTH (Prin + Int)	MONTHLY TAXES AND INSURANCE	MONTHLY UTILITY COST	TOTAL COST	COST BURDEN INCOME	SEVERE COST BURDEN INCOME
Bozeman	\$77/61	\$495	\$130	\$108	\$734	\$29,360	\$17,616
Kalispell	\$70/56	\$450	\$130	\$97	\$677	\$27,080	\$16,248
Missoula	\$73/58	\$470	\$155	\$104	\$729	\$29,160	\$17,496
Simple Average (unweighted)	\$73/58	\$472	\$138	\$103	\$713	\$28,520	\$17,112

Comparing Tables 68 and 69 reveals that for those with extremely low and very low incomes, owning a home represents a cost burden that exceeds 30 percent of the gross income for over 56.4 percent of the survey's respondents. This is substantiated by the 1990 Census, which indicated that a few years earlier, in 1989, nearly 54 percent of all Montana households earned less than \$25,000 per year.

Table 69 also presents the level of annual income a household may be receiving if experiencing a severe cost burden. Note that all severe cost burden income levels are above \$16,000. Here, the 1990 Census has indicated that over 32 percent of Montana's households earned less than \$15,000

in 1989.³⁴ However, for this class of households, current lending practices will not allow loans to be made to householders who would experience a severe cost burden, therefore a cost burden would happen less frequently with owners than with renters.

COST BURDEN FOR TWO-BEDROOM RENTAL

A random sample of advertised rental prices for two-bedroom units was selected, as was a sample of property managers in the three cities cited above.³⁵ A current listing of the monthly utility costs for a two-bedroom multifamily unit were obtained and added to the rental costs.³⁶ The result was the total monthly housing cost.

Table 70, below, summarizes the monthly cost of a two-bedroom apartment as derived from the sampled newspaper advertisements and property management representatives. It is important to indicate that unit attributes and rental rates vary by location.

TABLE 70
COST BURDEN FOR RENTERS
TWO-BEDROOM APARTMENT

CITY	MONTHLY RENT	UTILITY COST	TOTAL COST	COST BURDEN MIN INCOME	SEVERE BURDEN MIN INCOME
Bozeman	\$675	\$106	\$781	\$31,240	\$18,744
Kalispell	\$500	\$111	\$611	\$24,440	\$14,664
Missoula	\$425	\$111	\$536	\$21,440	\$12,864
Simple Average (unweighted)	\$533	\$109	\$643	\$25,707	\$15,432

The table above indicates similar results to those found in the case of for-purchase housing. The monthly payment for rent represents a cost burden for a significant portion of Montana's households. While the cost burden for renters does not appear to be quite as severe as the cost burden for prospective home buyers. Property managers have indicated that there were several people waiting to see available rental units. Such incidents affirm what has been stated earlier: there is a shortage of rental housing. Such shortages artificially keep prices high and present barriers, keeping some people from participating in the housing market.

To illustrate the dilemma facing Montana's citizens, a cost of living index specific to housing was gathered for several cities throughout the state. This data is compiled quarterly for 250-300 urban areas nationwide by the American Chambers of Commerce Research Association (ACCRA).

This index is a relative comparison, with the national average set equal to 100. It does not measure inflation. Each quarter is a unique measurement. Both the number and mix of participants can change from one quarter to the next, thereby altering the underlying comparability of the data.

³⁴ 1993 State of Montana Comprehensive Housing Affordability Strategy (CHAS), pg. 74.

³⁵ The Sunday Billings Gazette, June-July 1994.

³⁶ Figures on utility cost for multifamily units were provided by George Warn, Montana Dept. of Commerce, Housing Assistance Bureau.

Furthermore, some judgement sampling occurs with items within categories. Data is provided by participating chambers of commerce, or similar organizations, and no precise representation can be made as to the absolute reliability of each submitting entity's data. It is reasonable to assume that individual entities can collect data somewhat differently from time to time, thereby reducing the precision of a *long-term* or *time-series* representation. ACCRA inspects the data and discards or deletes perceived errors and omissions. Still, small differences between the index values of one area and those of another area cannot be construed as significant disparities in the cost of living. On the other hand, large differences can indeed represent real variations in the costs of living. Regardless of the above caveats, the data presents a reasonable *point-in-time* comparison between areas.³⁷

ACCRA COST OF HOUSING INDEX

QUARTER, YEAR	BOZEMAN	HELENA	MISSOULA	BILLINGS	DENVER, CO
4Q, 90	94.1	NA	NA	NA	101.7

4Q, 93	120.2	NA	97.1	111.5	120.2

The cost of housing index indicates some variation in the cost of housing around the state. Further, it is most interesting to note that the rates of increase across all sampled cities are rising faster than the national average, with Bozeman already 20 percent higher than the national norm for comparable housing.

In summary, Montana's cost of housing is rising faster than the national average, and the margins of cost burdens are increasing while wages are stagnant or falling. While more illustrative than strictly quantitative, the results of the ACCRA analysis correspond to the overall picture of housing conditions in Montana.³⁸ Difficulties are persistent, severe, and seem to resist easy solution.

HOUSING

As noted elsewhere in the plan, previous analysis has determined that a constrained supply of housing coupled with rising housing demand has been causing a substantive rise in the price of housing. This rise in housing cost has impacted many of Montana's citizens. While it is true that

³⁷ The ACCRA Housing Index is weighted with 25 percent rent for a two-bedroom apartment and 75 percent the monthly mortgage payment, using current interest rates, on an 1,800 square foot home (assuming a 25 percent down payment).

³⁸ Data derived from the various sources are, admittedly, not precise or necessarily quantitatively consistent. Further, the 1993 *Montana Housing Survey* data pertained to incomes of renters as well as current homeowners, some of whom may have already paid off their homes. It does, however, indicate the difficulty that citizens are encountering when first entering the home ownership market and the overall rental market.

development of new housing has been occurring, has it been occurring on a sufficiently large scale to absorb the rise in population? Table 71, on the following page, will assist in answering this question.

Between 1990 and 1994, 4,833 single-family homes were constructed, as were 219 duplexes, 138 three- and four-unit structures, and 115 buildings with five or more units. If one were to assume that the three- and four-unit structures were all four-unit facilities, and that the five-or-more unit facilities all had ten units each, then the total number of dwelling units constructed would be 6,973. The nearly 7,000 units added to the housing stock would be serving an estimated rise in the population of about 57,000, or about eight people per household. However, the average number of persons per household for Montana is about 2.6. This suggests that nearly 22,000 housing units would be required just to maintain the current level of supply.³⁹ These data indicate that, rather than easing, the market for affordable housing is becoming increasingly tight, with prices rising. Table 80 also illuminates two other important issues. Most of the housing development pertains to single-family homes, which make up about 70 percent of the new housing stock. Analysis presented in the Consolidated Plan has noted that affordable rental housing is critically short. New development patterns are not addressing this particular market. Moreover, development of housing is concentrated in a handful of areas: Flathead, Gallatin, Missoula, and Yellowstone counties. Several counties have not had any additions to the housing stock over the 1990-94 period.

³⁹ Absent from the construction data are counts of manufactured and mobile homes. Nevertheless, there would need to be nearly 15,000 of these units--27 percent more than four years ago--to compensate for the shortage. This is an unlikely prospect.

HOUSING DEMAND AND SUPPLY

Three housing availability issues are of concern for Montana. The first is the availability of rental units, especially low-cost units. The second issue is the availability of homes that meet the criteria for loan assistance and mortgage insurance. The third availability issue is the number of affordable homes on the market for low- and moderate-income people.

In regard to the first issue, there were approximately 34,601 low-rent units (units that cost no more than \$250 per month) in Montana at the time of the 1990 Census. Approximately 11,389 low-rent units were federally assisted, and the waiting list for publicly assisted units numbered 6,285. The supply of low-rent and/or assisted units does not meet the demand. There is a great disparity between the number of households earning less than \$10,000 and the actual number of low-rent units.

The second issue is the availability of homes that meet the criteria for loan assistance and mortgage insurance. It is true that the housing market is tight in some areas of the state, particularly in the major cities. However, in the rural areas of the state where vacancy rates are higher (particularly in the eastern region), the issue becomes more complicated by one of housing condition. In many instances, the poor condition of the vacant homes preclude the use of federal mortgage insurance programs. Without these programs, homes are not easily financed and are consequently out of reach for many potential home buyers. The result is a diminished supply of affordable homes.

The third availability issue is the shortage of affordable homes on the market for low- and moderate-income people. This is of particular concern in the major western Montana cities, which tend to have the lowest vacancy rates in the state and the highest home values (according to the 1990 Census). Where the market is tight and prices are escalating, it is becoming increasingly difficult for low- and middle-income people to purchase homes.

To get an overall picture of the availability of housing units, Table 72, combines data on both rental and owner-occupied housing. This table uses 1990 Census information on rental units by price range and value of owner-occupied housing units. The table adds the number of rental units available for under \$300 and homes valued at less than \$35,000. This number of housing units is then compared to the number of households earning less than \$15,000. The lack of available housing can be seen in the last column. Overall, these numbers point to a large gap between the demand for housing and the supply of affordable housing; the difference may be as large 25,000 units.

TABLE 72
AVAILABILITY OF RENTAL UNITS
AND FOR-PURCHASE HOMES
COMPARED TO NEED

AREA	NUMBER OF RENTAL UNITS > \$300	NUMBER OF HOMES > \$35,000	TOTAL UNITS	HH WITH INCOMES > \$15,000	NET SHORTAGE
City Average	17,878	3,611	21,489	32,047	10,558
CDP Average	1,735	414	2,149	4,250	2,101
Rural Average	28,117	21,996	50,113	62,251	12,138
TOTAL	47,730	26,021	66,508	98,548	24,797

This particular computation pertains most explicitly to the 1990 Census cost burden analysis presented a few pages previous. It is believed that these figures are even too low if applied to the 1994 affordable housing shortage.

SUMMARY

Single-family detached homes are the predominant housing type in Montana, making up about 66 percent of the housing stock; the share of the stock varies widely at the local level. About 21 percent of the statewide stock of homes were built prior to 1940, increasing the probability of lead-based paint hazards, especially for low income households. Other maintenance and structural deficiencies also tend to exist in these older structures, as does a higher incidence of vacancy. Sixty-six percent of the housing stock has two or three bedrooms.

In recent years, the single-family housing market has tightened, with sharp increases in home and rental prices. Because of rising unemployment rates and falling wage rates, some households face a wide financial gap between the supply of affordable housing and the quantity demanded. Market conditions are very favorable for the sale of existing homes at premium prices and development of expensive to upper-end single-family houses that sell quickly in rapidly growing parts of the state. While data seems to support a need for affordably priced homes, the market is not supplying those units to any appreciable degree.

For multifamily units and rental property, market conditions favor existing units commanding increasing rents. Pressure on rents in rapidly growing areas of the state does not appear to be easing, as few new, affordable multifamily units are being constructed. In slower to declining sections of the state, low incomes suppress even modest rental property improvements, thereby increasing the incidence of deferred maintenance. Housing suitability problems are persisting in these areas.

5. PAST HOUSING PROJECTS

In the variety of housing conditions, affordability problems, and affordable housing shortages presented above, the range of possible solutions is expansive. Needs can vary greatly by community. From elderly to transitional to rehabilitation to new construction, the size and degree of the problem is not alike. From 1992 through 1994 \$16.3 million was requested over the last three years from the HOME program alone. These funds were to be used with other matching funds, increasing the grant total to some \$45.4 million. The 58 CDBG housing projects funded over the last 12 years equal more than \$22 million in CDBG funds alone. These projects are distributed all over the state and include

rehab, new construction, conversion, homebuyer development, and disabled access construction. Montana expects this range of needs to continue. A complete table of projects funded under the CDBG and HOME programs is located in Section II under Consolidated Plan Programs. In addition numerous Community Housing Development Organizations, Housing Authorities, Human Resource Development Councils and other organizations are involved in affordable housing projects. While there is wide spread concern, the resources available do not even begin to meet the need in this state.

6. BARRIERS TO AFFORDABLE HOUSING INSTITUTIONAL/OTHER BARRIERS

The *Survey of Montana's Housing Needs* was sent to a sample of people throughout the state. The 385 prospective respondents were taken from the FY 1993 CHAS distribution list. Respondents were asked about the impact of building and energy efficiency codes and zoning regulations on cost of housing. It was the opinion of the group that these types of public policy issues do not appreciably affect the cost of housing. The vast majority noted that the codes and regulations had no effect on the cost of housing; one indicated that these types of actions decrease the cost, and 10 to 13 respondents noted that these actions can increase the cost. One can deduce that these policies may increase the initial cost of housing only modestly.

One question asked about the barriers to creating affordable housing that exist due to area market conditions. Responses included land cost, lack of sites in close proximity to services, shortage of rentals, and development costs in outlying areas as barriers to potential construction of affordable housing. Lots that are available are too expensive due to scarcity. The majority of people who can afford the high prices are newcomers who are bringing in high dollar equity gained from West Coast sales, thus pushing up the demand for local home sales and inflating home values. The demand for good home sites exceeds the supply.

Also, the number of rental vacancies is low, and the high average purchase price of homes forces people to remain in rentals. Housing costs exceed the income level of most local prospective buyers. The majority of homes being built are expensive, larger, single-family homes -- especially for newcomers who are willing and able to pay higher prices. The direction that developers are taking makes it difficult for the elderly, single parents, and low- to moderate-income persons to find affordable housing. Those who are able to find a house to rent or buy are often unable to afford it. The limitations and/or restrictions on home ownership programs do not alleviate the high cost of housing for families on fixed incomes. The market condition and housing vacancy rates support persons who can afford to pay mortgages of \$650 or more. Without a loan, many prospective buyers are unable to fulfill down payment requirements.

The survey also asked what organization or institutional barriers to affordable housing were present. Answers included the way in which institutions and organizations handle and develop funding priorities or criteria for selecting housing projects. Respondents stated that the funding priorities do not expand safe, decent, and/or affordable housing where it is needed. City, county, state, and federal resources and programs are not adequate to address and identify housing problems. Many local and state program organizations and nonprofits lack the interest that is needed to initiate a program to deal with housing issues. Programs tend to focus on creating housing that is affordable

to those earning 80 percent of the median income, rather than those on AFDC, etc. Local governments lack fiscal assistance and commitment. There are no zoning incentives, and no affordable housing requirements for new subdivisions. Sometimes city zoning regulations prohibit and/or discourage mobile homes, in-fill, and multifamily development. Funds may sometimes be lacking for rehabilitation of existing homes. Most rentals are old and landlords do not reinvest rental income in maintaining the interior or exterior of the structures. Taxes and sewer extension costs increase the expenses of building outside city limits, where land is affordable and regulations are more "friendly."

When asked how housing problems might be solved, respondents stated that any significant solution to facilitate the affordable housing crisis would involve all sectors of the state. Financing from local lenders is required for both acquisition and development loans and permanent financing for home buyers. Potential barriers such as the application process, financing, and unduly restrictive zoning restrictions will need to be addressed both at the local and state levels. Local banks need to look beyond seeking just CRA credits. The development of affordable housing is a capital-intensive business; therefore, the issuers of debt must be willing participants. Affordable housing is the key element of local infrastructure. There must be affordable housing to maintain local jobs. The economy is unstable and jobs are important to investing in housing or upgrading existing homes.

Since home prices can't be lowered, a tax incentive or some sort of builder's incentive would boost the sales of family units within the HUD mortgage limits. To counterbalance, HUD should raise the area limits. County officials can promote and assist in allowing construction of rental units that rent for prices commensurate with local area residents' incomes. Rental and down payment assistance should be offered to assist low income residents and elderly adults with disabilities. A thorough assessment of needs should be incorporated into a plan that addresses Montana's housing dilemmas in all categories.

The *1993 Montana Housing Survey*, a survey distinctly different from that mentioned above, was designed to collect specific data from a randomly drawn sample of Montana citizens. The sample totaled 3,600 people. Respondents were asked to vote "yes" or "no" regarding whether building and zoning codes adversely affect the affordability and availability of housing in their area. A majority indicated that neither type of public policy adversely affected housing. However, these responses need to be evaluated on a substate basis. In rapidly growing communities, some believe that zoning and building codes often adversely affect the housing supply. Furthermore, very few counties in Montana have adopted zoning regulations and many counties in Eastern Montana have little subdivision review and inactive or non-existent planning boards and staff. In the larger western towns, this is not the case.

The questionnaire asked respondents if building and zoning regulations adversely affected the availability of housing in their area. Overall, respondents indicated little impacts of these types of regulations, as noted in Table 73. However, a particular segment of the sample population stated a strongly adverse impact; lower income groups were much more likely to state the adverse impact of building and zoning regulations on availability as well as affordability of the housing in their area. In each case, as income rose, so did the percentage of respondents who stated there was no adverse

impact. This implies that low income persons perceive building and zoning regulations as discriminatory.

Respondents were asked to offer their own opinions on the major factors that affect a person's ability to purchase homes in their area. The most frequently cited reasons are shown on the table below, with the predominant ones all relating to affordability. The factor with the greatest number of citations was low incomes, the second affordability, and the third jobs. Aside from the obvious need for a strong economic base to provide more and higher paying employment, other opinions were offered. These included difficulties encountered in the financing and loan process. Particularly, many respondents considered it difficult to come up with a down payment.

The Montana Housing Opinion Survey, a third housing-related survey, consisted of two questionnaires sent to selected professionals in the housing and land use arenas. Surveys were sent to a total of 320 people. Respondents believed that lack of available land is a problem, although there was a difference in perception as to why land is not available. Some cited the fact that their community is surrounded by public land, tribal land, or by private land where owners are unwilling to sell for housing development. Others cited the need to extend city utilities, or the fact that zoning does not provide enough available land, especially for multifamily and mobile home development.

TABLE 73
FACTORS AFFECTING ABILITY TO BUY HOMES
1993 MONTANA HOUSING SURVEY

FACTOR	NUMBER	FACTOR	NUMBER
Low Incomes	247	Location	18
Affordability	225	Suitability	18
Jobs	155	Economy	15
Availability	95	Cost of land	10
Financing/Loans	50	Job Insecurity	9
Down Payment	45	High Prop. Values	5
Out of State Buyers	26	Rich/Retired Buying	4
Property & Other Taxes	25	Population Increase	3

Of the 40 responding communities, 28 stated that they require local building permits for new construction and 23 require permits for remodeling. Twenty communities have been certified to enforce Uniform Building Codes.

IMPEDIMENTS AND OPPORTUNITIES FOR PROVISION OF HOUSING

Current conditions indicate that a lack of incentive for creating affordable home ownership opportunities has persisted, thereby creating an extreme shortage of affordable housing supply. With today's market conditions, there are many barriers to construction of multifamily dwellings. These barriers also impede the creation of affordable rental housing. Economic theory suggests that demand pressures placed on the housing market can be relieved by more supply coming into the marketplace. Market conditions indicate that a significant degree of market demand for affordably priced homes and rental properties remains unmet.

There remains hope, however, as two events have occurred over the last few years that may lead to corrections in the market place. One relates to the Low Income Housing Tax Credit, which was made a permanent part of the federal tax code. This will enable affordable housing to be more attractive to investors, although its results may not be seen for quite some time. Secondly, the

Montana Legislature passed into law a bill giving local jurisdictions the ability to pass tax deed properties⁴⁰ into the hands of nonprofit entities. This may lead to the provision of additional affordable housing.

In summary, there appear to be mostly impediments, and few opportunities, to the development of affordable housing in the current housing market.

FAIR HOUSING NON-COMPLIANCE

Impediments to fair housing choice are defined as: *Any actions, omissions or decisions taken because of race, color, religion, sex, disability, familial status or national origin that restrict housing choices or the availability of housing choice, or any actions, omissions or decisions that have this effect.* Equal and free access to residential housing (housing choice) is fundamental to meeting essential need and pursuing personal, educational, employment or other goals.

Over the last few years, as the housing market has tightened with rising prices and falling vacancy rates, allegations of ongoing unfair housing practices have become more widespread. The *FY95 Closed Case Statistics in Housing* provided by the Montana Human Rights Commission identified 132 cases. Thirty percent or 38 of these cases were closed by predetermination settlements or withdrawal with benefits settlements. Nineteen percent of the cases resulted in conciliation or conciliation failure where the investigation found reasonable cause to believe that unlawful discrimination occurred. Thirty-seven or 28% of the closed cases had no cause findings. In recent years Montanans have become more aware of laws concerning discrimination and the work of the Montana Human Rights Commission and other organizations regarding enforcement of Fair Housing programs.

The protected classes under federal law are race, color, religion, sex, disability, familial status or national origin. The problems of fair housing discrimination are exacerbated by the income level of a family. In 1994 the State of Montana completed *An Analysis of Impediments to Fair Housing Choice*. The various analyses conducted in the Analysis also "...reveal that households with extremely low and very low income levels, who in fact have the highest need for affordable housing, are more susceptible to encountering unfair housing treatment". Low income families who are members of a protected class were more likely to report being discriminated against than families with higher incomes of a protected class.

E. NON HOUSING COMMUNITY DEVELOPMENT CONDITIONS

Over the years, Montana's public facilities have gone under funded. This has gone hand in hand with increasing federal mandates for more clean water, wastewater treatment, landfills, and other public facility operations. Past studies related to Montana's water systems identified the longer term problems amounting to \$360 million. A survey completed in 1995, and discussed later in the plan, identifies needs and cost equivalent at a much larger figure. Other components of Montana's

⁴⁰ Tax deed properties are properties which have been sold due to nonpayment of taxes.

infrastructure are also having significant problems, and cannot be overlooked. These include roads, bridges, storm sewers, fire stations, police stations, law enforcement centers, jails, and handicapped accessible public buildings.

Fundamental to the notion of enhancing the public facilities and infrastructure is Montana citizens' financial ability to pay for these system enhancements. Through the discussion of economic status, it was demonstrated that Montana's wages were lower than the national average. When spread across some 457,000 employed persons, the total wage gap is substantial.

F. INSTITUTIONAL STRUCTURE

Most state-administered housing assistance, public facility, and economic development programs are handled by the Montana Department of Commerce (MDOC), primarily within the Local Government Assistance Division and the newly formed Housing Division. In November of 1994, the State Housing Task Force recommended centralization of housing programs within state government to increase coordination and assist in the development of a cohesive state housing policy to guide the operation of all housing programs in Montana. The Department of Commerce formed a Housing Division which includes the Board of Housing and its programs, the Section 8 program and the HOME Investment Partnerships program (HOME). As lead agency, the Housing Division will continue to develop the Consolidated Plan, and manage and coordinate its many related housing programs. The Local Government Assistance Division will continue to manage their CDBG programs for housing and public facilities. The Division will also continue to administer the CDBG Economic Development program. Together the Divisions will continue to promote the interaction and coordination of entities involved in providing the services identified under these programs. The Emergency Shelter Grant Program is administered by the Intergovernmental Human Services Bureau of the Department of Social and Rehabilitation Services.

Many banks, savings and loans, and other financial organizations involved in housing are interested in taking advantage of federally assisted housing improvement programs in order to meet requirements of the Federal Community Reinvestment Act (CRA). Two federally assisted programs are the Montana Community Development Block Grant (CDBG) and HOME programs. Community Housing Development Organizations (CHDOs) and local governments can apply for HOME funds to assist in providing additional affordable housing. Local governments apply for CDBG funds to use for housing projects involving the rehabilitation of homes owned or rented by low- or moderate-income families and other activities to improve the neighborhood in which the housing rehabilitation is taking place. CDBG and HOME funds have played a key role in "leveraging," using program allocations to attract private dollars by creating a pool of funds for rehabilitation and new construction loans at below market interest rates.

MDOC will continue communicating and coordinating activities with other agencies throughout the year. These actions can assist in identifying areas in which further communication and cooperation may be needed, and can help to identify gaps in the institutional provision of services. Actions have included application workshops for CDBG and HOME, information and data dissemination regarding the Community Reinvestment Act, advice to nonprofit entities on how to

become certified as CHDOs, support for other entities in their application processes for funding of various programs, and joint work on evaluation of homeless subpopulations. Emergency Shelter Grant Program will continue to provide grants to the ten regional Human Resource Development Councils for renovation, rehabilitation or operating costs of homeless shelters.

MDOC recognizes that policy and program responsibilities are often fragmented across a variety of agencies and organizational entities throughout both the state and federal governments. The state has been able to collect some data pertaining to the size and needs of nonhomeless persons with special needs. However, much of the information is general in nature. MDOC will be looking to the public and other interested parties for input in the development and specification of goals for serving this in-need population. Furthermore, MDOC supports the prospective participation of individuals representing the interests of the developmentally disabled, persons in correctional institutions, and other nonhomeless persons with special needs.

The Community Reinvestment Act (CRA) has stimulated the involvement of for-profit organizations in the provision of affordable housing. One example of CRA's work is the Community Home Ownership Program of Norwest Bank. Norwest Banks in Montana and Wyoming have allocated funds to be used for home mortgage loans. The loans are available to people in Norwest Bank-designated market areas in Montana for purchasing single-family, owner-occupied residential units. The bank's program provides a low down payment, no discount points, low loan origination fees, and competitive interest rates on home mortgage loans. Loans are available only to families earning no more than 115 percent of the HUD-determined median income for the area, up to \$30,000. These benefits help make home ownership possible for some low- and moderate-income Montanans.

1. OVERCOMING GAPS: ASSESSMENT AND ACTIONS

In the past, the institutional structure for carrying out the delivery of housing programs and services was very fragmented. This occasionally led to confusion and unwitting competition between programs and service providers. Guidelines and procedures were sometimes overly complex. This condition created some gaps in the delivery systems. With consolidation of program responsibilities in MDOC, many of the gaps have disappeared. Furthermore, MDOC continues to build its capability as the sole-source information clearinghouse as related to all housing programs and services.⁴¹ This action is designed to further allay confusion and unwitting competition in program and service delivery systems.

There remains a significant gap in the delivery of housing services that may worsen over the five-year period: resources are inadequate to completely address housing needs, as evidenced by the size of the State's Section 8 waiting list. Lowering of Fair Market Rents (FMR) has had a slight effect in decreasing units under lease in the Section 8 program. The FY 96 change to fortieth percentile FMR will have a similar effect. However it is unknown at this time.

⁴¹ All service and program inquiries should be directed to Ms. Connie Onstad, Montana CPS coordinator (406) 444-0092, in Helena.

Regarding the gaps in the delivery of programs and resources, respondents to the *Survey of Montana's Housing Needs* expressed many concerns: HUD guarantees loans that can extend to \$75,500, but the average home selling price is \$114,603.⁴² Homes that are affordable (\$70-\$80,000) might not meet HUD housing quality guidelines. Non-profit organizations are over-extended in their ability to serve a population that is growing because of newcomers, and the private sector is slow to respond to Montana's housing needs. Programs need to be administered with consistency and simplicity. The general public is not aware of the programs available and those programs lag behind in demand and are too complicated. Some individuals feel program requirements are too time consuming and difficult to understand.

The efficiency of programs is not the only resource that is failing. Transitional housing of any kind is lacking for homeless, HIV infected, handicapped, and drug and alcohol addicts. Most federal programs make it too difficult to apply because of match fund requirements for the project, thus ignoring smaller communities with less money and a smaller population. Programs and resources need to be fully available to all areas and people in Montana.

2. GOVERNMENTAL COORDINATION

Many financial organizations involved in housing are interested in taking advantage of federally assisted housing improvement programs in order to meet the requirements of the Federal Community Reinvestment Act (CRA). The Census and Economic Information Center (CEIC), within MDOC, has been responding to many requests for information pertinent to the CRA and for planning information to aid in the development of housing proposals. Two federal programs allied with the CRA are the CDBG and HOME programs. Community Housing Development Organizations (CHDOs) and local governments can apply for HOME funds to assist in providing affordable housing. Local governments apply for CDBG and HOME funds to use for housing projects involving new construction, rehabilitation of homes owned or rented by low- or moderate-income families, and activities to improve neighborhoods. HOME and CDBG funds have played a key role in "leveraging," using federal dollars to attract private dollars by creating a pool of funds for rehabilitation loans at below market interest rates. MDOC also has been communicating and coordinating activities with other agencies, which assists in the identification of areas in which further communication and cooperation may be needed and helps identify gaps in the institutional provision of services. Activities included application workshops for CDBG and HOME funding, information and data dissemination regarding the CRA, technical assistance workshops and publications, advice to nonprofit agencies and prospective nonprofit entities on how to become certified as CHDOs, support for other entities in their applications for funding,⁴³ and joint evaluation with SRS of the unsheltered homeless population.

⁴² This figure was supplied by a *Survey of Montana's Housing Needs* respondent, concerning gaps in program and resource delivery.

⁴³ For example, the Community Development Bureau assisted the City of Kalispell in forming an alliance with the Federal Home Loan Bank of Seattle. The bureau's role was to emphasize the strength that the program had throughout the state and MDOC.

IV. HOUSING, HOMELESS, & NON-HOUSING COMMUNITY DEVELOPMENT NEEDS

A. HOUSING

Earlier in this report, Montana identified an affordable housing shortage in excess of 25,000 units. Such conditions precipitate overcrowding and poor or substandard conditions in both the rental and owner-occupied housing stocks, both of which have also been identified. Together, these underscore the needs for new construction as well as renovation or rehabilitation of existing structures.

To further illustrate the types of housing needs that are precipitating requests for funding, an enumeration of previous program requests of the HOME and CDBG (housing) programs has been tabulated. In Montana, the HOME and CDBG program funds are distributed based on sets of criteria that rank applications within a competitive environment. Since resources are indeed less than the size of the need, applications must compete for funding. Furthermore, while all needs identified are worthwhile, specific project-related issues may make an individual project more or less viable than others. Ranking criteria for each of the programs is revised and updated each year. Specific guidelines for each program are available upon request.

1. SUMMARY OF MONTANA'S HOUSING NEEDS

The lack of affordable housing for very low-, low-, and moderate-income persons has risen in prominence as a national policy issue. The lack of affordable housing across the nation has affected individuals, families, and the elderly, whether homeowners or renters. According to a 1986 report prepared by the National Governor's Association, housing costs are rising faster than income.⁴⁴

Montana has not escaped the influences of the nation's housing problems. An analysis of the number of low-rent units, low-cost homes, and the number of households earning less than \$15,000 per year indicates that there may have been a shortage of 25,000 units of affordable housing to those households in 1990. This particularly affects families, who make up almost 70 percent of all Montana's households. Today, the situation is much worse as pressures and constraints on the housing market have spread to affect Montanans of all income categories.

These shortages have driven monthly rental payments and housing costs up sharply in the last few years. This places many people at risk of homelessness and places home ownership out of reach for many Montanans. Even though there is great demand for low-cost housing, there has been little new construction of single-family or multifamily units for low- and moderate-income Montanans.

Rehabilitation of the existing housing stock is also a pressing issue. Many occupied units around the state are in poor condition because their owners cannot afford maintenance costs. Elderly

⁴⁴ *Decent and Affordable Housing for All: A Challenge to the States*. National Governor's Association, 1986.

Montanans, who constitute the largest group of homeowners in the state, often lack the resources necessary to maintain their homes. For potential home buyers, units that stand vacant for long periods of time constitute a rehabilitation problem. Often the cost of bringing the units up to a liveable standard is prohibitive. The poor condition of the units can also preclude the use of mortgage insurance programs, without which the units are not easily financed.

There is also a need for modification of existing units to make housing accessible to Montana's physically disabled population, some of whom currently live in units that are not adequately equipped. In addition, energy inefficient units place an unnecessary cost burden on Montana's renters and homeowners. Energy conservation modifications are needed to address the overall issue of affordable housing across the state.

A number of groups in Montana have special needs linked to the provision of affordable housing. For homeless people, the disabled, families headed by single parents, and the elderly, there is a need for supportive services that facilitate independence. Homeless people in Montana, while not as prevalent as in other areas of the country, are finding fewer available units in some local shelters. These facilities are simply not able to meet the need for emergency and transitional housing and other services.

Single parents head 17 percent of Montana's families. Where there is a high rate of single-parent families in public housing facilities (a situation more common to Montana's major cities) the provision of day care and job training services is needed both to facilitate the family's move toward self-sufficiency and to maintain a stable public living environment.

The elderly make up more than 17.5 percent of Montana's adult population and represent the largest group of homeowners in the state. Congregate care housing for this group, which fosters independent living while providing supportive services, is a compelling need.

There were more than 50,000 mobile homes in Montana in 1990. Whereas mobile, manufactured, and modular homes⁴⁵ represent an affordable housing alternative for many Montanans, such owners tend to face restrictive or discriminatory zoning laws or practices in many areas, particularly in rapidly growing parts of the state. The challenge to policy makers in Montana is to identify and press for equitable alternatives to current zoning and land-use conditions for low- and moderate-income Montanans.

Montana's economy has suffered along with the national recession. Industrial activities related to the state's resource base have declined, particularly lumber and wood products. Structural changes in the state's economy have compounded the problem. Many of these economic difficulties

⁴⁵ Mobile and manufactured homes are detached residential dwelling units fabricated at a factory, not in accordance with the standards of the Uniform Building Code, and designed for transportation on its own chassis to a building site for occupation as a dwelling with or without a permanent foundation. 'Mobile' refers to units built before 1976, 'manufactured' to those built from 1976 on, which conform to the Federal Manufactured Home Construction Safety and Standards. Modular homes are also fabricated in a factory, but are constructed to meet the Uniform Building Code, plumbing, mechanical, and electrical construction codes that apply to site-built homes. MDOC, Local Government Assistance Division, Community and Technical Assistance Program, *A Model Municipal Zoning Ordinance*, December 1994, pg. 9.

will continue. Without proper intervention by housing specialists, the lack of available, affordable, and suitable housing may persist.

There has been a tremendous change in the statewide housing market since the 1990 Census. Vacancy rates have continued to drop dramatically. For example, Glendive had 300 vacancies in 1990, compared to 30 in October 1992. In Sidney, where 75 rental homes were converted to owner-occupied units, purchase demand for single-family homes has virtually eliminated one-year leases for rentals. Missoula's rental vacancy rate has hovered near zero since April 1992. In Miles City, low-rent units are rented as soon as they hit the market. Compared to other states, Montana's housing was fairly affordable in past years. This is no longer the case across much of the state, especially in the more urbanized areas.

Montana's limited resources are not adequate to address *all* the housing requirements of low- and moderate-income households, elderly Montanans, people with special needs, and other in-need populations. The Montana Department of Commerce (MDOC) and the people of the state share in the task of exploring creative approaches to expanding the supply of housing. Together, Montanans must move forward in securing and applying federal, state, and private resources to solve the state's housing problems.

The Survey of Montana's Housing Needs, conducted during FY 1993, indicated several distinct problems and a variety of options for overcoming deficiencies in the provision of affordable housing. These findings can be summarized as a critical shortage of rental housing and a severe shortage of owner-occupied homes. All income groups are adversely affected, with low-income persons being placed in the most compromising circumstances. In-needs groups are scattered statewide, but the elderly and handicapped have the highest incidence of need. There tends to be a high level of unsuitable homes and rental property as perceived by the public.⁴⁶ In addition, both rental housing and owner occupied homes are not very accessible for Montana disabled citizens. Further, the in-need groups are specifically the homeless, the elderly, and the mentally or physically disabled. Since the incidence of AIDS/HIV infection is relatively low in Montana, the public perceives little need for this type of housing and housing-related services. However, within local jurisdictions, these needs can contrast sharply. Also, rental and home prices are increasing significantly, with building and zoning practices affecting housing availability in areas with faster growing populations and active subdivision and zoning activities.

Few opportunities exist today for increasing the provision of affordable housing, but many barriers exist. These barriers include land prices, material costs, population migration, and zoning regulations. Service gaps exist. These relate to programs that provide additional support to the in-need groups. These service gaps can be partially addressed through current delivery systems, but most sources are under-funded.

The *Montana Housing Opinion Survey* also conducted in 1993, confirmed the previous survey analysis. Rental housing is critically short throughout the state, and owner-occupied homes

⁴⁶ In general, Montana citizens take a more critical view of suitability than the CPS definitions.

are not affordable. Furthermore, developers are largely uninterested in providing low-cost housing, whether for rent or purchase. Respondents indicated similar causes for the high cost of housing, such as building materials and land costs. Other indicators contributing to the lack of affordability are related to low paying jobs, an inability to meet credit requirements, and an inability to save for down payment and closing costs. The survey respondents indicated that prospective solutions relate to low cost financing, rent and home subsidies, and assistance to builders and home buyers.

The *1993 Montana Housing Survey*, through the canvassing of randomly selected citizens, revealed findings similar to the above two needs assessment results. There are critical shortages of rental housing, and severe shortages of affordably priced homes. There are significant needs for program support for the creation of low-cost rentals and affordably priced homes. Even Montana's Section 8 waiting list concurs with the above, as over 6,000 are now on the list, which is expected to rise to about 10,000 over the course of the next few years.

2. ESTIMATES OF HOUSING NEED BY INCOME

VERY LOW INCOME

There are nearly 40,000 households throughout the state that are considered very low-income renters; another 75,000 households are very low-income homeowners. The two income groups, comprising about 115,000 households, make less than 50 percent of the state's median family income, or less than \$14,000 per year. Of the low-income renters, nearly 10,000 are elderly one- and two-member households, over 13,000 more are small related households, and another 3,300 are large related households. Of homeowners, 17,150 are elderly. The majority of these groups have housing problems. Adequate housing suitable for habitation is not affordable for this group.

OTHER LOW INCOME

For the other low-income household category, those having incomes between \$14,000 and about \$22,500 per year, fewer households can be categorized. There are about 21,250 renter households and 56,000 owner-occupied households that can be considered other low income. Of the renters, 3,400 are elderly and nearly 2,000 are large families. Of the homeowners, 14,000 are elderly. This group is also having difficulty locating affordable housing that is suitable for habitation, due to shortages and high prices in the market.

MODERATELY LOW INCOME

There are about 8,400 renter households with incomes 81 to 95 percent of the state's median family income, between \$22,500 and \$25,640 per year. Of these, 904 are elderly and 784 are large families. However, 27,033 of Montana's households fit the moderate income classification and are homeowners. Twenty-five percent of the large family renter households are experiencing housing problems; and 25 percent of those in the "all other owners" classification are experiencing housing problems. Again, these problems center on availability and affordability.

SUMMARY

Of the 306,919 households in Montana, 45 percent of large family renters were having housing difficulties, according to the 1990 Census. Of the elderly homeowners, 66 percent were having some form of housing difficulty. Overall, 75 percent of all Montana's households make less income than the national average median family income of about \$36,000.

3. POPULATIONS WITH SPECIAL NEEDS -- OTHER THAN HOMELESS

As households make less money, their likelihood of being homeless increases. Hence, the very low-income households are particularly vulnerable to increases in the unemployment rates, economic fluctuation and slowdown, and public policy issues. Montana views this group of people in need of financial and personal counseling, job training (or retraining) and short term emergency services and supplies, such as food, and relief from energy or other utility costs.

NEED FOR SUPPORTIVE HOUSING

Mental illness is a pervasive, disabling disease that affects a significant number of individuals. In October, 1995 the Department of Mental Health and Human Services conducted a survey⁴⁷ of the five regional mental health centers (MHC's) to determine the number of clients served by each region, as well as the number of beds or permanent rental units specifically set aside for persons with severe and disabling mental illness.

The MHC's collectively served 11,655 unduplicated clients in FY 1995. Of those, 4,031 are known to have severe and disabling mental illness. The survey results showed 44 permanent rental housing beds set aside for the mentally ill. Group homes offer an additional 59 beds, yet it is important to note that group homes provide 24 hours care and are considered transitional housing. There are six homes currently under construction that will offer an opportunity for homeownership for the mentally ill. In addition to those individuals served by the Regional Mental Health Centers, there is an uncounted number of homeless mentally ill or those families and individuals served by the private sector.

The Montana Public Mental Health System Plan identifies housing for the mentally ill as one of the strategy areas with the goal of encouraging the provision of supportive services in the "least restrictive, most natural and least disruptive setting possible." The mentally ill are constantly at risk of homelessness. Housing for those with special needs continues to worsen. Those with mental illness, are often left without meaningful choices to find safe, decent and affordable housing.

In January 1994, the Mental Health Division and the Mental Health Planning and Advisory Council coordinated a survey⁴⁸ to identify the most important issues in providing services to people

⁴⁷ The survey was supplied by Rusty Redfield, Department of Public Health and Human Services and is available upon request.

⁴⁸ Survey results are available upon request from the Department of Public Health and Human Services.

with severe mental illness. Survey results identified housing development as the most important issue. The Council also identified housing as the number one issue, verifying the results of the survey.

Montana's Older Americans Act (1987) reaffirms the State's commitment to its older citizens. The act describes older Montanans as a valuable resource that it is not receiving sufficient services in all areas of the state. The act identifies the services needed by the State's elderly population, and plans are laid out for the following:

- develop appropriate programs;
- coordinate and integrate all levels of service;
- create a directory of available services and transportation to them;
- programs to facilitate self-care;
- physical and mental health care;
- legal programs;
- adult education, and
- research in aging.

The facilitator of elderly assistance is the Aging Services Unit of the Montana Department of Family Services. The office is responsible for developing and administering the state's plan on aging, develop an intrastate funding formula, representing the interests of the elderly in state legislative and regulatory bodies, and evaluating Area Agency on Aging activities.

While there are other segments of the in-need populations, such as the AIDS/HIV infected persons or those with alcohol or other drug dependence problems, and the State plans to distribute funds to these groups, funding levels are in line with the relative size and severity of the problems in Montana.

While the state has about 140,000 persons over the age of 60, about 12,993 of these persons require assistance, in some form, for housing. Of those, 3,267 are estimated to be frail elderly.

B. HOMELESSNESS IN MONTANA

1. SHELTERED AND UNSHELTERED HOMELESS

A study conducted for the Department of Social and Rehabilitation Services (SRS)⁴⁹ identifies two types of homeless: the *old homeless* and the *new homeless*. The old homeless are what most people think of when discussing the homeless. They are "typically white, unmarried males, around 50 years of age, who suffer from alcoholism and who are intermittently employed."⁵⁰ The second type identified by the study is the new homeless. Those are younger, include more women and families, and are more racially and ethnically diverse.

⁴⁹ *The Sheltered Homeless Population of Montana*, 1993.

⁵⁰ *Ibid.*

In the FY 1994-98 CHAS Five-Year Plan, homelessness was identified as a challenge that is being addressed in Montana's housing strategies. Yet the homeless population includes both a sheltered and unsheltered population. While the sheltered population might be more visible and available for studying, the unsheltered populations are more difficult to trace and research, a notion stressed in the SRS study and born out in the low numbers counted in the Census for Montana and other studies. Overall, the data offered on unsheltered populations in Montana has been relatively scarce. One way to deal with this difficulty is to draw some inferential conclusions based on data available on the sheltered homeless population. This is done below with the SRS study. However, a more accurate portrait of the unsheltered homeless population was provided through the SRS' 1994 Unsheltered Homeless Survey, the preliminary results of which appear below.

SHELTERED HOMELESS POPULATION

The SRS study examined the sheltered homeless population in the state of Montana on two different nights: December 2, 1992, and January 26, 1993. Moreover, the study utilized a survey of shelter directors and a voluntary questionnaire of those seeking emergency shelter. The study concluded that approximately 502 homeless sought shelter each day during December and January. The December count found 548 people, and the January count included 461. On each night, 16 people requesting shelter were turned away: two at the emergency shelters and 14 at the runaway youth shelter. Shelters turned people away due to lack of space or because of age and behavioral problems.

The study also found that the homeless population consisted of 61 percent males and 49 percent females. Persons under the age of 19 made up 43 percent of total homeless population, with a majority of those under age 9. The mean age of the homeless population in Montana was 26. Native Americans, the second largest racial group in Montana, were disproportionately represented in the studied homeless population. While they constitute 24 percent of the sheltered homeless population, they make up only 6 percent of the total statewide population. Finally, the study presented the reasons for homelessness as cited by shelter directors and the clients of the emergency shelters. According to shelter directors, domestic violence, lack of job skills, and substance abuse were the leading reasons. According to clients of the emergency shelters, unemployment, moving to seek work, mental problems, and family breakup were the leading causes of their homelessness.

The SRS study targeted 17 emergency shelters, seven domestic violence shelters, eight runaway youth shelters, and eight voucher systems. Few of the shelters were in northeastern Montana, and none in the southeast. Most surveyed shelters were located in urbanized areas (six in Billings, five in Missoula, and five in Bozeman). A majority of homeless people (352) were served by emergency shelters, while 70 stayed in domestic violence shelters, 41 stayed in runaway youth shelters, and 23 utilized the shelter voucher system.

The mean age of the homeless population in Montana was 26. Individuals under the age of 19 made up 43 percent of the total sheltered homeless population, with a majority of that group under age 9. The study found that the homeless population consisted of 61 percent males and 39 percent females. Females made up a majority only in domestic violence shelters, with 67 percent (47 of 70

people). Adults between the ages of 20 and 49 represented 48 percent of the sheltered homeless population, most in their 30s. Only 9 percent of the homeless were over age 50.

Native Americans were disproportionately represented in the studied homeless population. They constituted 24 percent of the sheltered homeless population in this study, yet they make up only 6 percent of the total statewide population. Whites represented 72 percent of persons in these shelter facilities.

Additional information about the homeless in Montana was collected through two questionnaires: the first was distributed to directors, and asked their opinion of the make-up and needs of their patrons; the second was offered only to emergency shelter clients, who completed the survey on a voluntary basis. According to the shelter directors, the average length of stay at a shelter ranged from 8 to 20 days; clients stayed longest at domestic violence shelters, ranging from 20 to 37 days. Those using vouchers typically remained only 1 to 5 days.

Shelter directors indicated that the major reasons for an individual's or family's homelessness varied. Sometimes several factors conspired to force the person or household into homelessness. Table 1, below, presents the shelter directors' opinions of the percent of their clients citing the following major reasons for their homelessness.

TABLE 1
DIRECTORS' ESTIMATES OF REASONS FOR HOMELESSNESS⁵¹
PERCENT OF CLIENTS HAVING FOLLOWING REASONS

REASON CLIENT SEEKING SHELTER	ALL RESPONDENTS	DIRECTOR'S OPINIONS BY TYPE OF SHELTER			
		EMERGENCY SHELTER	DOMESTIC VIOLENCE	RUNAWAY YOUTH	VOUCHER SYSTEM ⁵²
Domestic Violence	34%	23%	100%	33%	3%
Lack of Job Skills	27%	33%	0%	2%	54%
Substance Abuse	23%	32%	13%	5%	26%
Can't Find Affordable Housing	20%	34%	10%	0%	13%
Deinstitutionalization	7%	11%	0%	4%	6%
Runaway Youth	6%	2%	0%	29%	0%
Public Assistance Problems	6%	13%	0%	0%	1%
Other	14%	8%	0%	24%	26%

Domestic violence was most commonly cited by shelter directors as the reason for homelessness, but job skills, substance abuse, and affordable housing followed closely. Respondents cited deinstitutionalization, public assistance, problems, other difficulties, and runaway youth less frequently as the reason for their homelessness. Note, however, that some shelters do not take in runaway youth.

Homeless adults were most likely to identify economic-related reasons, such as unemployment or moved to seek work, as the cause of their homelessness. Unemployment in the homeless

⁵¹ Percentages may not add to 100 percent due to reasons for homelessness; multiple responses were allowed in the survey.

⁵² Includes facilities offering food, clothing, and other basic necessities but do not operate a shelter of their own. Rather, they administer vouchers to homeless people so they can receive shelter at places such as local motels.

questionnaire translates to 'job skills' in the shelter director survey. Substance abuse was rated as a less frequent cause of homelessness by this type of respondent, while domestic violence was rated lowest by shelter clients. The difference between the two tables can be attributed in part to the limitation of the shelter client survey; i.e., it was available only to clients of emergency shelters and was completed on a voluntary basis. Montana's homeless are primarily in need of support services related to long-term job training and counseling. Shelter directors also cited transitional housing, permanent housing, and employment as in great need. The immediate needs of the homeless relate to affordably priced permanent housing, medical health services, food, and clothing.

According to shelter directors, emergency shelter (94 percent), food (91 percent), mental health (88 percent), medical health services (85 percent), clothing (85 percent), and help for substance abuse (85 percent) typically were requested by and available to. Education (79 percent), job training (76 percent), and disability services (61 percent) were listed by respondents as moderately available. But sufficient funding to fully respond to client needs is not available at all facilities.

In the *Survey of Montana's Housing Needs*, respondents were asked to review and rate the degree of need by various types of in-need groups. The results of this question indicate that, given the incidence of certain types of in-need groups, certain needs appear more critical in some areas than others. As indicated in the table below, the degree of need for the elderly and mentally or physically disabled is rated more urgent than those of the AIDS/HIV infected, the alcohol or drug addicted, or specific racial minorities. No clear opinion emerged regarding the degree of housing need for the homeless.

UNSHELTERED HOMELESS POPULATION

The data contained within the SRS study pertains specifically to the sheltered homeless population, but analyzing it in further detail reveals some useful insights about the unsheltered homeless population.

The SRS study asked questions about the respondents prior stay. It was found that 40 percent of the homeless lived within county limits, 41 percent came from out-of-county, and 24 percent were from other states. Emergency shelters reported high percentages of out-of-state populations; domestic violence shelters reported mostly state residents. Homeless persons from out of state might contribute more to the unsheltered homeless population due to their lack of knowledge of available services.

The SRS study also asked questions about average length of stay at the shelter and also the length of time without a permanent residence. It revealed that parents with children tended to stay the longest; single adults, especially males, tended to stay the shortest amount of time. Building on this finding it could be inferred that the unsheltered homeless population will tend to have more males. The second part of this finding relates to the length of being homeless. It points out that about 38 percent of the respondents reported that they had been homeless from nine months to a lifetime, while 67 percent reported they had been homeless for less than nine months. What could be inferred from this is that long-term homeless populations might face the greatest possibility of being unsheltered more often and for longer periods of time. Overall, the homeless population who

went without shelter, as reported in the SRS data, tended to be young males with higher levels of behavioral, emotional, and mental problems. They were the group most often refused shelter space, often because of these problems. In Montana, the number of unsheltered homeless also varies directly with weather conditions. While these influences are *not* highly conclusive (nor statistically reliable), they do provide for some initial discussions of Montana's unsheltered homeless.

Lastly, the major difficulty in assisting unsheltered populations is to be able to reach them; this requires a clear identification of their locations, and it requires an understanding, on the part of the homeless, of where to turn for help.

1994 UNSHELTERED HOMELESS SURVEY

During calendar year 1994, the Family Assistance Division of the SRS conducted a survey of unsheltered homeless individuals in Montana to better define rural homelessness and enhance the State's understanding of unsheltered homeless. The objectives of the survey were to conduct interviews with unsheltered homeless persons, analyze their situation and needs, and report findings to the SRS for planning and HUD compliance reporting. The goal of the survey was to enhance capabilities in forming policies and plans for assisting the unsheltered homeless.

In order to conduct an effective survey, a target population had to be defined. To filter out those homeless persons who were sheltered, the first survey question was where the individual had stayed the night before. If the answer was "in a shelter," the surveyors did not continue the interview. If the respondent did not stay in a shelter the prior night, the surveyor proceeded with the questionnaire. A "homeless" individual was defined as someone who did not have a permanent place to live. This included individuals who were living in a home of a friend or relative on a temporary basis as well as those people who were living on the streets.

Counting and interviewing an unsheltered homeless population is not an easy task. This is a group of people who, generally, do not stay in one place and have no permanent addresses where they can be contacted. The major concerns with conducting a survey of this type and gathering accurate data include duplicating people (over-counting) and under-representing (under-counting) the population. These concerns were taken into consideration when formulating the survey plan.

Volunteers conduct surveys in six different areas of the state: Billings, Glendive, Havre, Helena, Lewistown, and Missoula. Five of the surveys were conducted between August 22, 1994, and September 9, 1994. The other group (Helena) was done on October 10, 1994, through October 14, 1994. The short time-span allows some certainty that few if any people would be counted in two different cities, as there was not enough time for the individuals to migrate from one place to the next and be surveyed twice. In addition, a survey question requested identifiable characteristics of the respondent to make certain that duplicate individuals in the same town would not be counted. Surveyors asked for the name (or initials) and age of the respondent, wrote down the sex of the respondent, and wrote down the location of the interview. Another factor that helped assure no duplication was that the groups surveyed in the particular towns were often quite small, and the interviewer almost always conducted all of the interviews in that town, which would make it easy for them to keep track of who had already responded to the survey. After all of the data had been

gathered for analysis, the factors listed above were checked for any duplication that might have occurred. No duplications were found.

The second main concern with this survey was making sure that the surveyors contacted everyone possible in order to have an accurate representation of the population. Options for conducting the surveys were to have service providers such as soup kitchens or food banks conduct surveys on the unsheltered homeless who come on site for services or going out in search of the unsheltered homeless people wherever they might be. The second option was selected in order to protect against under-representation of the unsheltered population. If the interviews were limited to those individuals who use services, the group of people who do not use services would have been missed. The surveyors targeted locations that are typical places for unsheltered homeless individuals to be, such as parks, campgrounds, streets, freeway underpasses, and lines outside of food banks.

At the conclusion of the survey, a total of 81 responses had been collected, the analysis of which follows. If any inaccuracy could be attributed to the survey's final count, it would have to be that the number is lower than the actual unsheltered homeless population in Montana. One of the factors that could have contributed to this potential misrepresentation is that some of the surveys were conducted at the beginning of the month, coinciding with some homeless persons receiving welfare or SSI checks, which, in turn, means that there could have been individuals who were out of reach of the surveyors because they could have been elsewhere spending their money. Another consideration is that when winter and colder weather approaches, many unsheltered homeless migrate to a warmer climate. This would likely be occurring in September and October, and could be the cause of a smaller number of respondents than if the surveys had been done in July, for example.

Various information was gathered in the 81 surveys. Eighty-four percent of the respondents were male and approximately 16 percent were female, as seen below in Table 2, below. Montana's unsheltered homeless population is mainly Caucasian. Of the total, 55 respondents were white, 18 were Native Americans, three were black, one was Asian, one was 'Other,' and three were unknown, as seen in Table 3, on the following page. The respondents represented all age groups. The youngest respondents were a 16 year old female, and a 19 year old male. There were 18 people in their 20s, 28 in their 30s, and 23 in their 40s. Seven respondents were over the age of 50; some of these people were not sure of their ages. One man gave two choices: 59 or 63.

Out of those respondents answering the question regarding their marital status, approximately 48 percent were single. The next largest group were those individuals who were divorced, with approximately 26 percent. Separated individuals followed with approximately 17 percent, and about 9 percent of respondents were married, as seen in Table 4. A majority of those surveyed, 59 percent, have never had children, and there were 14 people who reported having at least one child with them at the present time (see Tables 5 and 6).

Approximately 1/3 of the homeless surveyed are veterans of the United States military. As might be expected, the homeless are not a group of people who have college degrees. Approximately 41 percent of the respondents have not completed high school, and about 43 percent of them reported having high school diplomas or GEDs as their highest degrees of education. Close to 13 percent have gone on for additional education -- having some college or vo-tech schooling, as seen in Table 7, below.

It is interesting to note that only 1/3 of the respondents are native to the state of Montana and have been here for most of their whole life, as seen in Table 8. The non-natives came from 20 different states, Canada, and Germany. When asked how long they have been in Montana, approximately 50 percent of the non-natives replied that it had been less than a year -- 20 people reported that they had been here for one month or less. Many people came to Montana in search of employment or to be with family and friends, others said that Montana seemed like a nice, peaceful, safe place to be, others said that they are just passing through or are stranded here, as seen in Table 9. An overwhelming majority of respondents (87 percent) would stay in the town where they were surveyed if they found a job there, and 80 percent would stay if they found a place to live.

Not surprisingly, most (94 percent) of the unsheltered homeless surveyed were unemployed. Many of the unemployed had been unemployed for less than one year. Most seemed willing to work, and wished they had a job. Only five respondents had jobs (fast food restaurant, seasonal harvesting, odd jobs, etc.) Other sources of income for the respondents were Social Security (8), food stamps (39), unemployment comp (1), AFDC (4), other (begging, collecting cans, etc.), 16. There were 46 people who would tell the surveyors what their monthly income was.

A few respondents attributed their homelessness to drinking or drug use problems even though this was not asked as a specific question. Several respondents refused to answer the alcohol and drug questions and said, "its none of your business!" Of those that did answer, almost half said that they do not drink, and about 80 percent denied any drug use, as seen in Tables 10 and 11.

Among the responses of unmet needs were: clothing, education, food, transportation, housing/help finding housing, jobs/job training, availability of an employment office, and medical care (including dental care, medicine, and eyeglasses). Four respondents mentioned drug/alcohol counseling, and two mentioned mental health counseling. Five people expressed a need for vocational rehabilitation or physical therapy. Three respondents needed day care for their children. Only six respondents said that they have no needs that are not being met.

Because this survey was of unsheltered homeless people, by definition none of those people surveyed had spent the previous night in a shelter. The majority of respondents had stayed outdoors or in a tent outdoors. The next locale with a high response rate, approximately 23 percent, was in a car/van/truck/RV. Other responses were in empty buildings or with family or friends. Only about 28 percent of respondents reported that they occasionally stay overnight in a shelter. This means that over 2/3 of this unsheltered homeless population are not using shelter facilities at all. The reasons given for using the shelters were warmth, showers, meals, and beds. Among the reasons given for not using shelters were cannot locate a shelter, lack of privacy there, too crowded, feel unsafe there, too many regulations, used up allotted number of days to stay there, feel "closed in" there, they are unclean, and that there are too many sick people there.

TABLE 17

Cigarette Smoke	1
Can Take Care of Myself/Don't Need Help	2
Got Turned Away	3
Too Noisy	1
Other	10
Missing Data	164
TOTAL RESPONSES (81 x 3)	243

All respondents were asked whether they had ever been turned away from a shelter for any reason. Approximately 63 respondents said that they had never been turned away when seeking to use a shelter facility, as seen in Table 18. Those who had been turned away reported various reasons, such as having already used up their allotted number of days, drinking or drug use, lack of room, not following regulations, and fighting with others, as shown in Table 19. The most often cited food sources for the unsheltered homeless were churches, soup kitchens, food banks, fast food, food bought with food stamps, and dumpsters.

WHY WERE YOU TURNED AWAY FROM A SHELTER(S)?

RESPONSE	FREQUENCY	VALID PERCENT
Drinking/Drug Use	6	27.3
Fighting With Others	1	4.6
Lack of Room for You	3	13.6
Didn't Follow Regulations	3	13.6
Used Up Allowed Number of Days	7	31.8
Other	2	9.1
Missing data/Not Turned Away	59	N/A
TOTAL	81	100.0

When it comes to travel and transportation, close to 62 percent of those surveyed reported that they have no transportation at the current time. Almost 2/3 of the respondents said that they move to another state during the winter months. Those who do not move reported that they stay with family or friends or look for some other place to stay in Montana. During the summer months it seems that about 3/4 of those surveyed travel around the state of Montana, and 70 percent of that travel was job-related -- for job searching or seasonal employment purposes. About half of the respondents report that they travel out-of-state during the summer, and again a large percentage of respondents listed the reason for this travel as job-related.

2. HOMELESS POPULATIONS AND SUBPOPULATIONS

In accordance with HUD requirements and requests, the following CPS Table 1 presents a count of the homeless population. Sheltered homeless are from the HUD CHAS Databook and the SRS Sheltered Homeless Study. Unsheltered homeless counts are drawn from the preliminary analysis of the 1994 Unsheltered Homeless Survey.

**CPS TABLE 1
U.S. DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT
HOMELESS POPULATIONS AND SUBPOPULATIONS**

	TOTAL #		
Part 1: HOMELESS POPULATION	Sheltered Homeless (a + c + d)	Homeless Unsheltered (a)	Total

5. Physically Disabled	NA
6. Persons w Alcohol/Other Drug Addiction	497
7. Persons with HIV/AIDS	15 (estimate)
8. Other (specify)	

3. ANTI-POVERTY STRATEGY

The main thrust of Montana's anti-poverty activities included establishment of a task force to reform the state's welfare system. Executive Order 12-93 created the Governor's Welfare Reform Advisory Council. The advisory council examined the design and operation of public assistance

programs to identify the circumstances that result in people living in poverty and needing welfare assistance. They explored alternatives to current programs through an in-depth review of welfare theories and national reform efforts, and developed a comprehensive reform proposal to meet the basic needs of recipients and provide resources necessary to maximize each recipient's opportunity to achieve independence. The proposal took the form of the Montana Department of Social and Rehabilitation Services' *Achieving Independence for Montanans Waiver Request*, completed in April 1994. The waiver request mapped out a path for cost-neutral welfare reform. The initiative, Achieving Independence for Montanans (AIM), includes the following:

- Establishing a Job Supplement Program to divert as many individuals and families as possible from AFDC;
- Replacing AFDC with a time-limited Pathways program;
- Requiring Community Service work for adults; and
- Changing the culture of the welfare office from one that emphasizes benefit issuance, to one that values the attainment of participant self-sufficiency.

The reforms are intended to divert Montanans at risk of becoming dependent on welfare and to encourage participants to become self-sufficient.

The next steps for AIM are to evaluate various portions of the initiative. Three types of evaluation are proposed: a process evaluation, impact evaluation, and benefit-cost evaluation. The process evaluation will document the way Montana's welfare reform policy was formulated and implemented. The results of this evaluation will be collected in a process evaluation report and "management letter" recommending actions to assure a more appropriate implementation. The impact evaluation will describe the anticipated and unanticipated effects of welfare reform. Lastly, the benefit-cost evaluation will use a cost model to document the financial costs and benefits of the reform and to calculate the cost neutrality.

The project, now called Families Achieving Independence in Montana (FAIM) will begin February, 1996 in eight counties. Activation of the project will continue in five phases.

4. HOMELESS SERVICES

Breaking the long-term cycle of homelessness, tempered by short-term shelter, cannot be accomplished by building more shelters or facilities alone. Real help is enabling the homeless to rely on themselves. Besides a lack of shelter, homelessness involves a variety of unmet physical, economic, and social needs. A comprehensive, coordinated system of homeless assistance, is comprised of a wide array of services, tools, and opportunities for the homeless. Homeless services will include a prevention strategy and help the homeless in stages--to take them from an emergency shelter to permanent housing.

The first stage involves emergency shelters. Here the homeless are provided with immediate shelter and assessed in order to identify an individual's or family's needs. The second stage offers transitional housing and necessary social services. Included in these services are mental health and substance abuse counseling, vocational rehabilitation, education, family support, child care, independent living skills training, job training and placement, and employment opportunities where the homeless can both acquire and put to use new work skills. The final stage is permanent housing

or permanent supportive housing arrangements. While all three stages may not be needed by everyone, the community will have them available as part of the coordinated, comprehensive plan.

The study lists recommendations on how to improve the conditions of the homeless population. It charges the Department of Public Health and Human Services (DPHHS)⁵³ with the responsibility of ensuring the provisions of the 1990 National Affordable Housing Act in formulating the homeless sections of housing policies and strategies. Since the unsheltered homeless population shares similar needs with the rest of the homeless population, these recommendations are valid for both populations. These recommendations include:

1. Profile those who are homeless in Montana; identify the causes of homelessness throughout the communities in Montana; develop inventories of available services; and design action plans in emergency needs, permanent housing needs, and design strategies to prevent homelessness, for populations with special needs.
2. More coordination among the state and local providers of care for the homeless is needed and this includes additional training, workshops, etc. The provision of outreach programs is also needed.
3. DPHHS should develop a task force or coalition to generate on-going recommendations addressing the needs of the homeless population in Montana. This task force should include representatives from various groups and organizations who deal with the homeless.
4. DPHHS should devise a comprehensive state plan for addressing the needs of Montana homeless population. This plan should assess the number, the needs, various homeless groups with special needs, and an evaluation of available federal programs and funding. Such a strategy would need to utilize the available resources and help mobilize the task force in its effort to combat homelessness.

5. HOMELESS PLAN DEVELOPMENT

In keeping with these efforts, DPHHS, has begun the general formation of a plan to address the homelessness. However, it is subject to federal regulation and budget priorities, all of which are currently in transition. Still, the following currently summarizes the draft plan, while qualifying the appropriate federal mandates.⁵⁴

Consolidation of the Emergency Shelter Grant and Supportive Housing programs probably will occur, and the Section 8 SRO Program may also be modified or incorporated with the above. The consolidation may begin in fiscal year 1996. For FY95, the total funding allocated to homeless would be over \$900 million, nationally.

⁵³ The Department of Public Health and Human Services was formerly known as the Department of Social and Rehabilitation Services prior to July 1, 1995.

⁵⁴ As many of HUD's programs come up for reauthorization, the DPHHS's homeless assistance programs are also in a state of flux. The federal Senate and House of Representatives have yet to hammer out the details of the proposed legislative changes contained in companion bills.

The consolidated on the Emergency Shelter Grant Program with other McKinney programs did not occur. The legislation to effect the consolidation was not enacted, nor did the Administration's proposal to combine homeless assistance into one program result in the hoped for dramatic increase in ESG funds. Appropriations for ESG for FY96 have yet to be enacted, but a significant cut from FY95 is expected.

However, a super Notification of Funds Availability (NOFA) was issued by HUD to encourage communities to apply for funds to provide a range of services for homeless individuals.

C. NON-HOUSING COMMUNITY DEVELOPMENT NEEDS

1. ECONOMIC DEVELOPMENT

FINDINGS OF PAST ECONOMIC DEVELOPMENT STUDIES

During the past 22 years, there have been at least 10 separate reviews and studies of Montana's community development position by various public agencies and private-sector consultants.

In 1970, the Bureau of Business and Economic Research of the University of Montana completed the *Montana Economic Study*. Samuel Chase, Jr. and the other authors of the study concluded that Montana was unlikely to regain its relatively prosperous economic position and was likely to fall even further behind. The authors cautioned, "We do not believe that a permanent order of priorities -- a grand design -- can or should be established with respect to state actions to remedy the situation." Instead a continuous, orderly process allowing Montanans to consider facts and express their preferences in light of changing economic realities was recommended. The report avoided making specific recommendations on how to address the challenge of low economic growth, but called for tax reform, governmental reorganization, and consolidation.

In August 1976, Governor Thomas Judge presented the *Montana Governor's Policy Initiatives* as representative of the areas upon which he anticipated the executive branch would focus its primary attention during the 1977-79 policy cycle. Specific policy and programmatic initiatives covered general government, community affairs, the economy and the environment, education, human services, public safety and protection, and transportation. The ultimate goal of the plan was to create job opportunities at a rate sufficient to provide employment for all Montanans by identifying areas suitable for increased economic growth and activity, taking into consideration the existing economic base, availability of materials and energy, labor market factors, transportation, existing market demand, and pollution-control requirements.

The *Montana Economic Development Project*, co-sponsored by the state government and the Montana International Trade Commission, began working to identify and analyze new economic development opportunities for Montana in spring 1982. By January 1983, a strategic plan for economic growth was produced with the help of McKinsey and Co. The plan, while never put into final form and published, was used as a framework in 1987 by the Governor's Council on Economic

Development in the development of *The Next Century: Strategies for Advancing Montana's Economy*. The final summary draft of the 1983 McKinsey and Co. report contained detailed reviews of Montana's economic performance, an assessment of Montana's economic development assets and liabilities, and 22 specific recommendations to promote growth, including the Ambassadors business recruitment effort, more support for tourism promotion, increased investments in infrastructure, the formation of a science and technology committee, and a comprehensive tax study

During the period from 1983 to 1988, several of the recommendations of the 1983 work were acted upon, with many more initiatives directed to sector-specific task forces or industries for further study. Published works during this period included the proceedings of a July 1986 *Conference on Montana's Economic Future* featuring Dr. David Birch, papers presented to a *Conference on Taxation and the Montana Economy* in September 1986, and the *Report of the Economic Transition Task Force to the Governor* in November 1986. On March 22, 1987, the *Great Falls Tribune* published a special edition insert with the results of a survey of Montana leaders that recommended a list of individuals most likely to lead Montana through the economic transition. This insert also contained a series of essays by Montana leaders and academics who voiced opinions about particular government policies.

In August 1986, Pacific Power published a target industry study of Northwestern Montana.⁵⁵ This study was the result of a research effort to identify industries with the best development potential for Lincoln, Flathead, and Lake counties in Northwestern Montana. The report is a compilation of geographic, demographic, and economic characteristics of that area.

The industrial economy of NW Montana is mainly manufacturing of lumber and wood products and aluminum production. The manufacturing sector was the third largest employer in the area in 1984. Agriculture in the area is mostly wheat ranching and some fruit growing. Trade (retail and wholesale) was the largest employer in 1984 -- about 23 percent of total employment for the area. Government employment was the second largest sector in 1984, and the service sector was expanding. The tourism industry played a significant role in the NW Montana area as well.

Pacific Power targeted three groups of industries for economic development:

- Industries whose products are imported into the area.
- Industries that exist locally and export products out of the area to markets that are expected to grow.
- Industries whose primary production inputs are available, although the industries may not be represented in the area.

The top industries that were chosen included plating and polishing, welding apparatus, miscellaneous plastic products, aluminum castings, fabricated metal products, boat building and repair, furniture and fixtures, wood partitions and fixtures, and tourism. These industries were selected as having the best prospects and highest potential for development in the NW Montana economic area.

⁵⁵ Pacific Power & Light Company. *Target Industry Study: Northwestern Montana*, Portland, Oregon, August 1986.

In December 1988, the Montana Ambassadors (a private organization of business and university leaders) published *Partnership for Progress*, a report that summarized the opinions of the Ambassadors' membership on the Montana economy, analyzed the economy and its problems, and made a number of recommendations related to tax reform, education, capital availability, workers' compensation reform, and other key development issues.

Also in December 1988, the Governor's Council on Economic Development presented *The Next Century: Strategies for Advancing Montana's Economy*. The report drew upon previous work of McKinsey and Co., David Birch, and other expert advisory groups. According to Stanley Nicholson, "The hallmark of the report was the diagnosis that Montana now has two economies, the traditional resource-based sector that is declining and the new small business sector that is advancing."⁵⁶ The report recommended five strategies as crucial to Montana's economic future:

- Investing in the workforce;
- Encouraging and supporting entrepreneurship and business innovation;
- Building and maintaining physical infrastructure;
- Strengthening local government fiscal capacity; and
- Strengthening State fiscal capacity.

Additionally, the report presented 14 specific tactics to nurture economic development at the state and local levels and called for a review of the tax system. The tactics are summarized below, by category.

Workforce Investments

1. Maintain and Enhance the Educational Attainment and Skills of Tomorrow's Workforce.
 - Teachers, parents and administrators should focus on the outputs of education -- what they want students in their community to know and be able to do as a result of their schooling -- rather than on the inputs. Courses of actions to pursue include: adopt and regularly upgrade school accreditation and graduation, give schools more discretion over education and administration, publish annual reports on the performance of public educational and private training institutions, provide performance bonuses to schools, allow parents to choose among public schools.
2. Strengthen the Earning Capacity of Poor People and Reduce Welfare Caseloads.
 - Compared to most other states, Montana takes relatively good care of its poor. But, it is less successful at removing the barriers that keep people dependent upon welfare. Social service agencies need to assess welfare dependents' personal and economic strengths and weaknesses and encourage them to choose appropriate routes toward independence, providing financial assistance along the way. Excellence of social service agencies must also be fostered through offering a wide range of competitive services under performance contracts.

⁵⁶ *Ibid.*

Entrepreneurship/Business Innovation

3. Increase the Visibility of Montana Entrepreneurs.
 - This will draw attention to the opportunities in Montana for new business development. By recognizing entrepreneurship, a climate is created that fosters new enterprises and helps existing businesses to grow.
4. Assure the Availability of Management and Marketing Assistance for New and Expanding Businesses.
 - New businesses often fail because they do not know how to succeed -- they lack the business management or market development experience necessary to stay in business. Help is available through the Business Assistance Division of the Montana Department of Commerce, through the Small Business Development Centers, through the Center for Entrepreneurial Studies at the University of Montana and through vo-tech school programs.
5. Appoint a Temporary Financial Services Commission to Review the Regulations Governing Competition in Montana's Financial Industry -- Including Intrastate and Interstate Banking -- Remove the Barriers to the Industry's Growth, and Increase Access to Capital for Montana Businesses.
 - The Commission would develop a strategy designed to encourage modern, responsible banking innovation and provide Montanans the benefits of a competitive financial system. Currently, Montana banks invest a lower share of their assets in local businesses and individuals than do banks nationwide, and invest instead in low-risk, out-of-state income earning assets such as government bonds.
6. Harness the Resources of the Higher Education System to Promote Economic Development.
 - High priority should be given to raising teaching and research standards, developing research capacity, and strengthening linkages with business.
7. Reduce Regulatory Barriers to New Business Creation.
 - Re-evaluation of state regulations that once served valid purposes but may now pose a barrier to competition and new business development will ensure that these regulations still serve legitimate public purposes.

Infrastructure

8. Improve Capital Planning and Budgeting.
 - The state needs to modernize its capital budget to ensure that the full costs of projects are displayed, and it should consider the use of enterprise budgets to encourage efficiency and flexibility in infrastructure service agencies.
9. Strengthen Montana's Infrastructure Financing Capacity.
 - The most promising ways to strengthen financing capacity include user-fee backed revenue bonds, more effectively marketed debt, and more competitive underwriting.

10. Create a Water Rights Procedure That Facilitates the Transfer of Water Rights Among All Beneficial Users.

- Water is a valuable economic resource. The state needs to clearly define water rights in terms of consumptive use, help local authorities develop procedures to market water, and integrate public trust values (recreational, environmental, etc.) into water markets.

Local Governments' Fiscal Capacity

11. Create a Statewide "Local Government Finance Corporation"

- The corporation would provide local governments with training on capital facilities planning and help cover the costs of that planning.

12. Employ User Fees Tempered with Low-Income Household "Circuit Breakers"

- A "circuit breaker" is a form of a property tax credit to households, which is useful to pay a portion of a public project's cost that exceeds a predetermined fraction of poor households' income. This is done to overcome the common objection to user fees for publicly provided infrastructure services -- that they will be a hardship for low-income households.

State Fiscal Capacity

13. Reduce Preferential State and Local Government Property Tax Abatements and Exemptions.

- Montana sometimes promotes economic development through special tax inducements. One person's tax reduction is either another person's tax increase or the loss of a public service. Good tax policy is not the same as low tax policy.

14. Develop a Long-Term Tax Strategy That Contains Overall Tax Rates and Makes the Tax System More Neutral and More Equitable.

- A comprehensive review of Montana's tax system is needed.

The May 1990 *New Directions* report commissioned by the Montana State AFL-CIO and prepared by the Corporation for Enterprise Development, a private consulting firm in North Carolina, presented another agenda for organizing Montana's human and natural resources to build a "first-rate state economy." The report recommended national leadership in programs for retraining older workers and for building foreign-language and cultural education into the curricula of schools and universities. The authors also criticized the tax breaks enacted in the 1980s to spur business development as largely ineffective, and recommended that some of those be reversed to help pay for the under-funded regular government programs and for their program recommendations.

2. PUBLIC FACILITY DEVELOPMENT

PUBLIC FACILITY DEVELOPMENT NEEDS

An Inventory of Infrastructure was taken this past year. First, data from various state agencies were collected and tabulated; secondly, a brief survey was conducted. Both these efforts were focused on two public facility issues only: water/sewer systems, and landfills. The following

discussion is designed to emphasize the degree and urgency of the infrastructure crisis in Montana, particularly in light of the fact that all the below are short range funding difficulties (those needing resolution within one to three years). Identified areas of need are by no means complete. Further, CDBG funding for infrastructure is the result of a competitive bid (and ranking) process.

1. INFRASTRUCTURE ANALYSIS

As mentioned previously, surveys containing questions dealing with each of the ten defined infrastructure areas were distributed to public entities. Three separate surveys were distributed. The first survey, mailed out July 18, 1995, included questions about water, wastewater and solid waste needs of each entity. The second survey, mailed out August 11, 1995, included questions regarding roads, bridges, and storm sewers. The third survey, also mailed August 11, 1995 included questions regarding fire stations, police stations and law enforcement centers, jails, and handicapped accessible public buildings.

A cover letter signed by Jon Noel, Director of MDOC; Alec Hansen, Director of Montana League of Cities and Towns; and Gordon Morris, Director of Montana Association of County Officials, was placed on MDOC letterhead and included with each survey. The letter stressed the importance of responding to the surveys in order that the legislature and state agencies may better understand the full scope of infrastructure needs in Montana. Mailing lists were prepared using directories published by the Montana League of Cities and Towns (MLCT) and Montana Association of County Officials (MACO) were also used to obtain names and addresses

Only public entities were surveyed. These included counties, cities, towns, and districts. Private entities such as trailer courts, water and/or wastewater associations, etc. were not included in the mailings. The water/wastewater/solid waste survey was a census; in other words, all known facilities were sent a survey. The remaining seven infrastructure categories surveyed, while not statistically sampled, represented as complete a judgmental sample as the cited surveys allowed.

WATER/WASTEWATER/SOLID WASTE NEEDS SURVEY

A total of 221 water/wastewater/solid waste needs surveys were distributed to public entities throughout Montana. The mailing list was compiled by combining lists obtained from the Water Quality Division of the DEQ, the Solid and Hazardous Waste Division of the DEQ, the League of Cities and Towns Directory and the Montana Association of County Officials Directory. The mailings went to superintendents, public works directors, clerks, chairmen, secretaries, managers, etc., of cities, towns, and districts. Two weeks following distribution of the surveys, D&A began placing phone calls to entities that had not yet responded to the survey. The phone survey appeared quite useful in that 59 additional surveys were garnered by completing them over the phone. It was also determined by phone calls that 17 duplicate surveys were distributed and 6 districts were no longer active. At least 3 attempts were made to reach each entity, and typically 6 to 7 calls were made. Despite these efforts, 45 entities either did not respond or could not be reached. A total of 145 valid surveys were received out of what was

determined to be a possible 198 surveys for a 73.2 percent response. The following table summarizes the returns for each of three systems.

TABLE 1
SUMMARY OF WATER, WASTEWATER, SOLID WASTE
RETURN NUMBERS

	MAIL	PHONE	NO RESPONSE	TOTAL
Water	58	42	47	147
Wastewater	57	42	35	134
Solid Waste	29	9	11	49
TOTAL	86	59	17	145

FIRE STATIONS/POLICE STATIONS AND LAW ENFORCEMENT CENTERS/JAILS/ AND HANDICAPPED ACCESSIBLE PUBLIC BUILDINGS

A total of 333 surveys were distributed to sheriffs, fire chiefs, county commissioners, police chiefs, marshals, building inspectors, etc. of cities, towns and counties throughout Montana. The mailing list was compiled using the League of Cities and Towns and Montana Association of County Officials Directories. Follow-up phone calls were not made by the consultant for this survey. However, phone calls were made by representatives of the Fire Safety Bureau and Board of Crime Control Bureau to encourage the return of surveys.

As of October 13, 1995, 101 surveys had been returned for a 30% response rate. The following should be noted: not all fire suppression entities were contacted (individual districts were not solicited), and building inspectors were surveyed in the hope that input regarding ADA would be provided, even though this may have been out of their jurisdiction. It is therefore felt that this exercise should be considered more of a sampling than an actual survey.

ROADS/BRIDGES/STORM SEWER NEEDS SURVEY

Street superintendents, supervisors, foremen and surveyors in 56 counties and 64 cities and towns were mailed a total of 120 surveys. The mailing list was compiled from listings in the League of Cities and Towns and Montana Association of County Officials Directories. Those not returning surveys did not receive follow-up phone calls from the consultant.

As of October 13, 1995, 30 surveys had been returned for a 25% response rate. This exercise was meant to be more of sampling than an actual survey, and due to the low response, it must be viewed that way.

SUMMARY

Survey forms were sent out in July and August to 674 appropriate municipal and county government officials. Considering the short response time allowed, and considering that late summer is a busy time of year for most public officials, the number of returns was in the range

of what was expected. In particular, return numbers from the areas of water, wastewater, and solid waste were very encouraging. This was due in large part to the follow-up calls made and to the fact that communities are relatively aware of their needs in these areas due to active regulation by government agencies.

The results garnered from the surveys will be helpful in estimating costs of addressing needs in the ten infrastructure areas. The following section will further discuss survey results and applications.

2. DETERMINATION OF MONTANA INFRASTRUCTURE NEEDS

GENERAL

Infrastructure is defined as the collective, long-term investment by citizens in facilities and installations necessary to their safety and convenience. Examples include transportation facilities (roads and bridges), utilities (water, wastewater and solid waste disposal) and public protection (fire stations and jails). All elements of infrastructure require periodic maintenance, expansion, and/or replacement.

This report addresses the needs of Montana in the following ten infrastructure areas:

1. Water Systems
2. Wastewater (sewer) Systems
3. SolidWaste Facilities
4. Roads/Streets (local government)
5. Bridges
6. Storm Sewer Systems
7. Fire Stations
8. Police Stations/Law Enforcement Centers
9. Jails
10. Handicapped Accessibility for Public Facilities or Buildings

This report addresses needs of municipal and county infrastructures only. Infrastructure needs in any of the ten defined areas associated with state, federal, and/or private entities were not considered.

Only infrastructure needs for projects not already underway were identified. Projects already underway, or funded but not yet underway, were not considered. To be consistent with the time period to be covered by the Consolidated Plan, an attempt was made to quantify only those needs that would fall within the next five years. However, if the time period was not indicated or fell outside of the five year window, the documented need was still considered, primarily because of comments noted which said that should monies become available, most project schedules would be moved up.

Insufficient detail was required on the survey forms for the entity to note whether costs for professional fees (architect/engineer), legal fees, right-of-way acquisitions, contingencies, etc. were included. These costs can typically run up to 25 % of the project. Allowance for these costs will be made for each category as deemed appropriate.

The survey forms asked what the basis for cost estimates was: professional, local authority, or other. In reviewing each survey, the source of cost estimates was considered, with more credence placed on those prepared by professionals than those prepared by locals. The consultant supplemented cost estimates on the survey forms where needs were identified yet no costs provided. Consultant-provided estimates were arrived at by using information presented on the surveys, and applying typical costs per units or utilizing cost ranges. Consultant estimates were also based on knowledge of the specific infrastructure, if any, and consideration of size and resources of the community including O&M capabilities. Compliance with federal, state and local design standards was considered during the estimating process.

WATER SYSTEMS

Public water systems are established in order that communities may be provided with dependable, safe and convenient supplies of water for drinking, domestic uses, fire protection, and irrigation uses. Major components of water systems include supply (source), treatment, storage, pumping and distribution facilities. Operating authorities typically consist of cities, towns and districts (counties).

Based on lists received from the Department of Environmental Quality, there are 180 public water systems in the state. Surveys were sent to 147 of these facilities, and 100 responses were received (58 written and 42 phone). Table 2 summarizes the preceding.

TABLE 2
SUMMARY OF WATER SYSTEM SURVEY RESPONSES

	NO.	% OF TOTAL (180)	% OF SURVEYED (147)
Total Facilities	180	100	-
Facilities Sent Surveys	147	82	100
Written Returns Received	58	32	39
Phone Contacts Made	42	23	29
Total Responses	100	55	68

(No Response From 47 Facilities)

Table 3, on the following page, presents a summary of cost estimates for each of the water components including supply, treatment, storage, pumping and distribution. Line 1 summarizes the estimated costs for each component as stated by the entity. Line 2 includes supplemental costs compiled by the consultant. Line 3 totals the estimated costs of line 1 and 2. Each line also includes the number of facilities identified as needing improvements. Note that facility numbers

across each line do not necessarily add up to the number in the total column since some entities have proposed projects that include more than one water component.

TABLE 3
SUMMARY OF COST ESTIMATES FOR NEEDS
FROM WATER SURVEYS

	SUPPLY	TREATMENT	STORAGE	PUMPING	DIST.	OTHER	TOTAL
1. SURVEY RESULTS							
Cost Estimates	5,736,300	19,086,667	99349908	6,030,417	43,606,588	2,986,400	87,381,362
# of Facilities	16	16		8	23	5	-
2. CONSULTANTS SUPPLEMENT							
Cost Estimates	738090019	7,550,000	15,813,500	1,200,000	17,876,700	5550002	50,376,100
# of Facilities		13	19	5	24		-
3. TOTAL							
Cost Estimates	131172003	2663666729	2574849036	72304171	614832884	35414007	1377574627
# of Facilities	5			3	7		1

Each survey was reviewed by the consultant. Where the entity indicated that estimated costs were provided by an engineer, numbers were not adjusted. Where the entity provided their own costs, the consultant checked the numbers and adjusted them where they seemed unrealistic. For the cases where the entity indicated needs but did not provide cost estimates, the consultant inserted a cost based on general knowledge of costs for water system components. For example, storage tanks typically cost between \$1.00 and \$1.50 per gallon depending on size and on whether they are on grade or elevated. Thus, communities smaller than 500 were assigned a cost of \$200,000-\$300,000 for a 200,000 gallon tank, communities 500-1500 \$500,000 for a 500,000 gallon tank and so on. Needs for larger communities tended to be well-documented based on recent engineering studies.

The DEQ Drinking Water Section of the Water Quality Division was consulted regarding needs identified by the surveys. Additional information was provided which was used during the consultant's process of checking and supplementing the surveys.

After consultations with DEQ and analysis of the surveys, it is felt that the total estimated cost of \$137,757,000 as presented in Table 4 is realistic. It is felt that an additional factor of 20% should be added to this figure to account for engineering, legal, contingencies, acquisition, and other costs that may not have been included. Thus, the final estimated cost to address water needs in Montana is projected at $\$137,757,000 \times 1.20 = \$165,000,000$.

WASTEWATER SYSTEMS

Wastewater systems, also known as sanitary sewer or sewage systems, convey and dispose of human and industrial waste, thus protecting the public from health hazards and nuisances. The primary components of wastewater systems are collection, pumping and treatment facilities. Local operating authorities typically consist of cities, towns, and districts (counties).

Records obtained from the Department of Environmental Quality indicate that there are 191 public wastewater facilities in the state. Surveys were sent to 134 of the facilities, and 99 responses were received (57 written and 42 phone). Table 4 summarizes the preceding along with associated percentages.

TABLE 4
SUMMARY OF WASTEWATER SYSTEM SURVEY RESPONSES

	NO.	% OF TOTAL (191)	% OF SURVEYED (134)
Total Facilities	191	100	-
Facilities Sent Surveys	134	70	100
Written Returns Received	57	30	43
Phone Contacts Made	42	22	31

Additional on Priority List	35	18	-
Total Facilities Addressed	144	75	-
(No Response from 35 Facilities)			

Table 5 presents a summary of cost estimates based on survey information for the State's wastewater needs. Estimated costs are presented for the separate wastewater components including treatment, pumping, collection and other. Line 1 summarizes estimated costs as provided by the local entities on the surveys. Line 2 presents supplemental cost estimates compiled by the consultant. Line 3 lists total costs for priority list projects not included on Lines 1 and 2. Line 4 provides a total of estimated costs for each component as well as an overall total. Each line also includes the number of facilities earmarked for improvements. Note that facility numbers across each line do not necessarily add up to the number in the total column since some entities have proposed projects that include more than one wastewater component.

TABLE 5
SUMMARY OF COST ESTIMATES FOR NEEDS
FROM WASTEWATER SURVEYS

	TREATMENT	PUMPING	COLLECTION	OTHER	TOTAL
1. SURVEY RESULTS

2. CONSULTANTS					
SUPPLEMENT					
Cost Estimate	\$ 2,238,000	\$2,500,000	\$20,095,000	-	\$24,833,000
# of Facilities	20	10	20	-	-
3. PRIORITY LIST PROJECTS					
NOT INCLUDED IN SURVEY	-	-	-	-	\$47,109,000
					35
4. TOTAL					
Cost Estimates	\$30,577,400	\$3,995,000	\$63,249,700	\$882,500	\$145,813,600
# of Facilities	39	16	36	1	89

A priority list, compiled by the Grants Bureau of the DEQ Water Quality Division, was obtained after distribution of the surveys. This list includes facilities with known deficiencies and indicates cost estimates to correct the deficiencies. This list was used to supplement information from entities returning surveys and to form a line item for entities not included on the survey mailing list. Note that cost information provided on the priority list is based on preliminary estimates and does not, in all cases, represent final engineering estimates. The cost estimates, however, are well within the accuracy of those provided in this report. The priority list estimates also do not include a detailed breakdown for each facility component, and thus only a grand total is listed in Table 5.

In supplementing the surveys, the consultant utilized common engineering principals and experience with past projects. In instances where the entity filled in costs and indicated the source was an engineer, the results were not corrected. In instances where the entity filled in costs based on their knowledge, the consultant checked the costs and made adjustments only when the costs seemed very unrealistic. When the entity indicated a need in a certain area, but did not include a cost, the consultant inserted a cost based on experience and knowledge of facility costs. For example, for communities indicating a need for a new lagoon, \$500,000 was indicated for those less than 500, \$1,000,000 for those in the 1,000 population range and \$1,500,000 for those between 1,000 and 5,000. The larger communities tended to have well- documented needs based on detailed analyses.

In determining a final cost estimate for wastewater needs in Montana, several factors must be considered. Table 5 shows a total dollar amount of \$146,000,000 for 89 facilities. As Table 4 shows, only 47, or 25%, of the facilities in the State were not addressed either by survey (written or phone) or the priority list process. It can probably be assumed that the 47 facilities not listed on either study were left off the priority list because no improvements were needed.

Another consideration is whether or not an allowance was included in each estimate for engineering, contingency, legal, acquisition, etc. As stated before, this number typically reaches 25 or 30 percent of the construction costs. It is likely that because most of the costs presented were provided by engineers, this allowance was made in most cases. However, a 10% increase is suggested to account for those entities that may not have accounted for these costs. Thus, the final estimated dollar amount for wastewater needs is projected to be $\$146,000,000 \times 1.10 = \$161,000,000$.

SOLID WASTE FACILITIES

Solid waste facilities provide protection to human health and the environment by maintaining adequate management services for waste created by the general population. Components of solid waste facilities consist of collection, transfer and disposal. Typically, solid waste management is conducted by city, county or private entities. Only needs of public entities such as towns, cities and districts (counties) are covered by this report.

Based on information provided by the Waste Management Division of the DEQ, 105 public solid waste facilities are in operation in Montana. These entities include 32 landfills, 6 transfer stations, and 67 container sites. The number of public/community collection systems was not available. Surveys were sent to 49 of these facilities of which 38 responses were received (29 written and 9 phone). Table 6 summarizes the survey responses.

TABLE 6
SUMMARY OF SOLID WASTE FACILITY SURVEY RESPONSES

	NO.	% OF TOTAL (105)	% OF SURVEYED (49)
Total Facilities	105	100	-
Facilities Sent Surveys	49	47	100
Written Returns Received	29	28	59

Total Responses	38	36	77

(No Response from 11 Facilities)

Table 7 outlines cost estimates for each of the solid waste components including collection, transfer and disposal. Line 1 summarizes the estimated costs for each component as stated on the survey by the entities. Line 2 includes supplemental costs compiled by the consultant. Line 3 provides totals of estimated costs contained on Lines 1 and 2. Each line also includes the number of facilities identified as needing improvements. Note that the facility numbers across each line do not necessarily add up to the number in the total column since some entities have proposed projects that include more than one solid waste component.

TABLE 7
SUMMARY OF COST ESTIMATES FOR NEEDS
FROM SOLID WASTE SURVEYS

	COLLECTION	TRANSFER	LANDFILL	OTHER	TOTAL
1. SURVEY RESULTS					
Cost Estimates	5156005	1,610,000	5,265,000	-0-	7,390,600
# of Facilities		3	9	0	-
2. CONSULTANTS SUPPLEMENT					
Cost Estimates	2000002	-0-	34500007	900001	3,740,000
# of Facilities		0			-
3. TOTAL					
Cost Estimates	7156007	16100003	871500016	900001	1113060020
# of Facilities					

Each survey was reviewed by the consultant. Where the entity indicated cost estimates were by an engineer, numbers were not adjusted. Numbers provided by entities were checked and adjusted accordingly if they seemed unrealistic. Where the entity indicated a need but did not provide a cost, the consultant developed a cost estimate based on information provided and cost

knowledge of solid waste facility components. For example, a small transfer station that may serve a county would likely cost \$500,000 while a transfer station for a large city may cost between \$1,500,000 and \$2,000,000. A sit down meeting was conducted with the DEQ Waste Management Division in which needs and costs of all public entities in Montana were discussed. This information was used during the consultant's process of checking and supplementing the surveys.

From Table 7, the total estimated costs to address solid waste needs in Montana is \$11,131,000 for 20 facilities. A reasonable comfort level relative to the solid waste needs of Montana is available to the Consultant and DEQ Waste Management Division following the big push to meet Subtitle D regulations over the past few years. Because of the Subtitle D requirements, most entities are up to date; thus, those still having needs are relatively easy to quantify. It is felt that an additional factor of 20% should be added to the \$11,131,000 cost estimate to account for engineering, contingencies, legal, acquisition, etc. costs that may have been left out of some of the estimates. Thus, the final estimated dollar amount for solid waste needs in Montana is projected to be $\$11,131,000 \times 1.20 = \$13,000,000$

ROADS/STREETS

Roads and streets built to federal, state and local standards provide a safe and convenient method of travel essential to basic industry, business, recreation, and emergency transportation as well as many other uses. Local governments are responsible for construction, reconstruction or rehabilitation of all public roads and streets not under the jurisdiction of the State of Montana or federal government. Table 8 summarizes the amount of roadways considered to be the responsibility of cities, towns or counties.

TABLE 8
SUMMARY OF
LOCAL ROAD/STREET MILEAGE

CITIES & TOWNS (128)	
Within City Boundaries	2,480 Miles
Urban Routes	252 Miles
Secondary Routes	<u>48 Miles</u>
Subtotal	2,780 Miles ¹
County (56)	
Maintained	<u>58,033 Miles</u> ²
Total	60,813 Miles

1) Obtained From MDOT Records (1995 Figures)

2) Obtained From MDOT Records (1994 Maintained Miles)

A total of 120 surveys was sent out to all 56 counties and 64 of the 128 cities and towns; 28 surveys were completed and returned for a 23% response. The low response rate is not completely unexpected since the people surveyed are quite busy this time of year and a follow up phone survey was not performed; the survey was not a systematic sample, but rather a judgmental sample. Table 9 summarizes the information provided by the survey.

TABLE 9
SUMMARY OF COST ESTIMATES FOR NEEDS
FROM ROADS/STREETS SURVEYS

	NO.	MAINT.	RESURF.	RECONST.	TOTAL
CITIES & TOWNS	11	\$ 14,110,500	\$22,610,000	\$72,696,640	\$109,417,140
COUNTIES	17	\$38,653,900	\$36,879,000	\$36,865,000	\$112,397,900
TOTAL	28	\$52,764,400	\$59,489,000	\$109,561,640	\$221,815,040

Maintenance cost was included in the survey to gauge the magnitude of need for day to day upkeep of systems. As shown by this sampling, the needs for maintenance are approximately 25 % of the total cost. For the purpose of this report, maintenance will not be included in the process of estimating costs.

Since the survey response was by no means all-inclusive (13 cities and towns out of 128 and 15 counties out of 56), the total costs contained in Table 9 are not representative of the magnitude of road and street need. One method of arriving at an estimate is to extrapolate the numbers out to reflect all entities. The following depicts such an exercise using ratios.

$$\text{Cities \& Towns} \quad \frac{11}{128} = \frac{95,306,640}{X} \quad X = 1,109,023,000$$

$$\text{Counties} \quad \frac{17}{56} = \frac{73,744,000}{X} \quad X = 242,921,000$$

$$\text{TOTAL} = 1,351,944,000$$

Applying a factor of 25% to this number results in an estimated cost of \$1,351,944,000 x 1.25 = 1,689,930,000 dollars. Another method of approaching a cost estimate is to utilize a ratio of miles and costs stated in the surveys in conjunction with total miles, see Table 10.

TABLE 10
SUMMARY OF MILES & COSTS FROM ROAD/STREET SURVEY

	MILES REPRESENTED	MILES TO BE IMPROVED	%	COST	COST PER MILE
Cities & Towns (11)	967	372	38	95306640	256200
County (17)	13521	3269	24	73744000	22600

$$\text{Cities \& Towns} \quad .38 \times 2,780 = 1,056 \text{ Miles} \times \$256,200 = \$270,547,000$$

$$\text{Counties} \quad .24 \times 58,033 = 13,928 \text{ Miles} \times \$22,600 = \$314,773,000$$

$$\text{TOTAL} = \$585,320,000$$

$$585,320,000 \times 1.25 = \$732,000,000$$

It appears that the methods result in two estimates, one of which is twice as large as the other: \$732,000,000 and \$1,350,000,000. Due to minimal information received from the surveys, and insufficient funds for the consultant to perform further analysis, the approximate average, or an estimated cost of \$1,000,000,000, is suggested for use in addressing the needs of Montana's roads and streets.

BRIDGES

Bridges are an integral part of the roadway network that is essential to Montana's transportation system. The MDOT has quantified around 2800 off system bridges greater than 20 feet throughout the State. The MDOT performs inspections on each of these bridges every two years. From these inspections, the Bridge Bureau has developed a priority list of 583 bridges (over 20 feet) that are in need of repair. The estimated costs for these repairs are \$142,000,000 (provided by MDOT Bridge Bureau). The MDOT feels that the other 1700-1800 bridges are in adequate condition for the time being. There currently is no count on bridges shorter than 20 feet. The MDOT is not concerned with these bridges since they have found that they can be replaced quickly and cheaply with culverts. Table 11 summarizes data received on the surveys.

TABLE 11
SUMMARY OF BRIDGE SURVEY RESPONSES

	< 20'	20' - 100'	> 100'	TOTAL
Cities & Towns				
Number	-	2500000	2400000	4900000
Cost Needs	-			
Counties (14)				
Number	982973000	10022283000	2415450000	22240706000
Cost Needs				
Total				
Number	982973000	10222783000	2615850000	22641606000
Cost Needs				

It is felt that the MDOT estimates are far more accurate than any costs that could be established using the limited information stated on the surveys. The MDOT viewpoint that bridges under 20 feet need not be considered appears sound since they can easily be repaired or replaced using maintenance monies. The estimated need for Montana's bridges is thus placed at \$142,000,000.

STORM SEWERS

Storm sewer systems are utilized to collect, convey and treat water resulting from precipitation. At this point, treatment is only necessary for communities with populations over 50,000. However minimal treatment is already achieved in many facilities utilizing detention ponds. Storm drainage for most small communities typically centers along the highway that

crosses through town, with curb and gutter and sometimes a few catch basins with collection piping.

Storm drainage improvements are not viewed as high priorities in most small communities. This is evident by the very poor response of the survey. Larger communities tend to experience more problems with storm runoff than do smaller towns. The primary reason for this is that more hard surfaces (roads, playgrounds, roofs, etc.) are present and the expanse of the development provides few places for the water to flow to. Only six entities responded to the storm sewer question. It is very likely that at least twice this many need major improvements, each in the 5 to 10 million dollar range. While responses were received from Billings, Great Falls, Helena, and three smaller entities, information from Missoula, Kalispell and Bozeman was lacking.

The six entities responding to the survey identified needs of over 31 million dollars. Should some of the other larger communities such as Missoula, Kalispell, Bozeman, Lewistown, Livingston, etc. identify needs, it is likely that over 100,000,000 dollars could be required. Although Scott Anderson of the DEQ Water Quality Division has been identified as the contact person, that agency actually has little involvement with the issue at this time. Thus, assistance with supporting cost estimates of actual storm sewer needs is difficult to obtain. At present the consultant feels that the needs in Montana likely exceed \$100,000,000. However, the six documented projects requiring \$31,000,000 will be utilized for the estimated costs.

FIRE STATIONS

Fire stations are an important facet of Montana's infrastructure in that they provide a center for emergency vehicle and equipment storage as well as a center for emergency personnel to gather and train. There are currently 344 fire departments with around 9600 fire fighters (from the Montana State Fire Marshal). Of these 9600 (figure based on average of 28 per department), only about 400 are full-time, paid fire fighters. Montana is experiencing a crisis with its fire protection facilities due to rapid growth, particularly in remote, wooded areas that are difficult to service.

The 344 departments consist of municipal departments, rural fire districts, fire service areas, county departments and volunteer fire departments. Surveys were sent to all fire chiefs and marshals listed in the League of Cities & Towns and MACO directories. Of the 111 chiefs, marshals and commissioners contacted, 33 responded. Note that some chiefs and marshals oversee multiple departments and some departments have more than one fire station. The returned surveys identified \$8,318,000 of improvements. The majority of the improvements consisted of renovation, expansion, or new construction of structures, although some requests for apparatus were included. It should be noted that where necessary, the consultant supplemented identified needs by providing cost estimates based on desired square footages provided, multiplied by \$50 to \$100 per square foot.

The low response rate makes it difficult to establish a cost estimate for the needs of Montana. Although only 30% of those surveyed responded, it is very likely that many more have

similar needs. Based on the \$8,318,000 identified by the 33 respondents, each entity has needs of around \$252,000. If it were to be assumed that all 111 had a similar average needs, $111 \times \$252,000 = \$28,000,000$ would be necessary to address the needs. For lack of better information, $\$28,000,000 \times 1.25 = \$35,000,000$ will be used as the estimated cost to address the needs of fire stations in Montana.

POLICE STATIONS/LAW ENFORCEMENT CENTERS

Police Stations and Law Enforcement centers are integral to the public's protection. Central places are needed to dispatch emergency personnel and provide for working and training environments.

Surveys were sent to 141 police chiefs, sheriffs and marshals throughout the State. It is likely that some of these 141 entities share facilities and that several entities were not included on the mailing list. Only 23 surveys were returned identifying needs of \$12,401,000. According to the Montana Department of Justice (MDOJ) Board of Crime Control there are 184 police stations/law enforcement centers in the State. This is based on the theory that each of the 56 counties and 128 incorporated cities has a facility. Some of these are likely quite small one- or two-man operations.

A memo dated March 14, 1995 to Rob McCracken from Jim Oberhofer identified probable projects as gathered by placing random telephone calls (a complete survey was not conducted). Fourteen projects (including some jails) estimated to cost \$25,920,000 were contained in the memo. It was found that two of the projects were also contained in this survey. Adjusting for these two results in twelve projects at \$21,320,000. Note that four of these also include jail facilities. Once again, the low response rate makes it difficult to project costs. Adding to the difficulty is the probability that several entities share facilities and that those that share with jails may have placed costs for these needs in the next section. It is felt that by utilizing the March 1995 survey conducted by MDOJ and the information gathered by the survey, further extrapolation of numbers is not warranted. Thus the cost of $\$12,401,000 + \$21,320,000 = \$33,721,000 \times 1.2 = \$42,000,000$ for 35 projects will be used for the estimate of police station/law enforcement center needs.

JAILS

Jails exist to protect the general public from real and perceived dangerous persons who pose a threat to society. Jails are used as holding facilities for persons awaiting hearings or trial and for prisoners sentenced to limited terms. Jail construction and operation standards are designed to protect society and afford constitutional rights to prisoners. Separate facilities must be provided for adults and juveniles. In addition, isolation cells should be provided for intoxicated individuals. These restrictions along with increasing operation and maintenance costs are tending to drive entities towards plans for regionalization rather than construction of new jails.

Approximately 50 adult jails are currently present in Montana, all operated by counties. Several cities have holding facilities that really are not true jails. There are only three or four juvenile facilities in the State. The number of jails will steadily decline as more regionalization is realized over the next few years. However the need for holding facilities will continue to exist.

Of the 141 surveys distributed to police chiefs, sheriffs, and marshals, ten were returned. Needs identified by these ten surveys amounted to \$18,570,000. It should be noted that a portion of the \$35,000,000 projected for police stations and law enforcement centers also includes jail improvements. For lack of better information and difficulty in extrapolating costs, the survey number of \$18,570,000 will be used. Adjusting for architectural and engineering fees, legal, contingencies, and acquisition results in $1.25 \times \$18,570,000 = \$23,000,000$ projected needs for ten documented projects.

When addressing needs of jails in the future, it may be more realistic to combine the analysis with police stations and law enforcement centers.

HANDICAPPED ACCESSIBILITY FOR PUBLIC FACILITIES OR BUILDINGS

In 1990, Federal Legislation was enacted which has become known as the American Disabilities Act. This act requires that all facilities or buildings must be accessible to the physically impaired. Examples of areas requiring accessibility modifications are building entrances and exits, floor levels, and restrooms. ADA requirements are enforced on a federal level with no jurisdiction available to state and local entities. Thus, if a violation is noted, a complaint must be lodged with the U.S. Department of Justice. This has only happened once in Montana.

No statewide coordinator is available in Montana, although the Governor has established a task force for ADA, and different state departments have retained experts to study their own facilities. Numerous public entities have begun addressing ADA requirements to greater or lesser degrees, particularly county courthouses and town halls. This is especially true of public entities that have been receiving federal dollars.

Sheriffs, fire chiefs, commissioners, building officials, and others associated with city and county governments were sent 333 surveys. Fourteen responses were received with needs totaling \$1,316,900. This number appears to be extremely low. Even though numerous entities have begun addressing ADA deficiencies with their buildings and facilities, many, many more need attention. Until more complaints are lodged and heavy fines are levied, there is no incentive for public entities to properly address ADA. In the meantime, further education in public awareness is probably the best plan of action.

The results from the survey of ADA needs are not considered usable and therefore no estimated costs for addressing handicapped accessibility needs can be projected.

SUMMARY

As noted in Table 12, infrastructure needs exceed \$1.6 billion for Montana. Cost estimating information presented in this section was based on sound engineering judgement. As discussed previously, more effort was spent to identify needs for water, wastewater, and solid waste facilities than was spent on other categories. Attempts to establish cost needs for storm sewer and handicap accessibility were somewhat futile. In order for officials to be able to better identify their needs, a sincere education effort must be directed towards public entities regarding these two areas of infrastructure.

The need for all public entities to have a capital improvements plan (preferably kept up to date) became apparent during the course of this analysis. Larger communities with such plans were able to provide detailed and accurate estimates of their needs, probably by expending little effort. All public entities should be encouraged to prepare capital improvement plans for their infrastructure. Such documents would assist in their short- and long-term planning of improvement projects. In the case of surveys such as this, it would be much easier for local officials to complete the forms in a timely manner. As it is, many individuals avoid filling out surveys simply because they don't want to take the time, or if they do, frustration sets in because questions become difficult to answer. A concerted effort to educate public officials regarding capital improvements plans and their benefits should be made. Incentives such as providing matching funds may be a way to further such plans.

A common feeling noted during the survey process was that there was a realization that improvements were necessary but no money was available to cover the costs. Some officials appeared to be settling into an attitude of futility rather than actively seeking ways to solve their problems. Realistic ways to assist local entities in funding badly needed infrastructure projects should be established as a high priority for the State of Montana.

D. FIVE-YEAR FORECAST FOR HOUSING AND COMMUNITY DEVELOPMENT NEEDS

Short term fluxions have risen this past year; however, the overall impact to the Five Year Forecast for the Consolidated Plan is minimal. The economic and demographic data has been updated with conclusive results that affordable housing conditions in the state are worse then ever. A significant effort has been given to study infrastructure conditions this past year. Assessment of infrastructure and information results of the surveys may precipitate future changes in infrastructure priorities and actions.

1. ECONOMIC DATA, EMPLOYMENT AND INCOME BY INDUSTRY

The following discussion addresses a forecast of employment and earnings by industry, unearned income, population by age and sex, and household formation annually through the year 2015. While presented here at the state level, all of Montana's 56 counties have similar annual forecast data. For the purpose of assisting local jurisdictions with planning issues, the county-level economic and

the purpose of assisting local jurisdictions with planning issues, the county-level economic and demographic forecast is available from MDOC.⁵⁷

Statewide employment growth is expected to slow, falling from a 1.86 percent growth rate between 1967 and 1993 to a 1.14 percent rate of growth over the 1993 through 2015 period. This slower growth still has employment rising to nearly 600,000 by the year 2015. Employment in the agricultural sector continues to fall, shedding some 2,000 jobs over the period. The largest percent employment expansions will come from increases in retail trade and services, as presented in Table 13. Persons who remain employed in these lower paying sectors will continue to face difficulties affording adequate and suitable housing. Furthermore, while a short period of growth will occur in manufacturing employment, it will fall to below the 1993 level before the close of the forecast horizon. The traditionally higher paying industrial jobs will not keep pace with overall employment growth.

Total wage and salary income will rise over the forecast horizon, due to rising productivity and the lack of recessionary pressures. Earnings will increase from \$7.35 billion in 1993 to about \$11 billion (real 1987 dollars) by the year 2015. Average real earnings per worker will increase over the forecast horizon, but, as noted above, earnings will not be equitably distributed over the economy. The net results indicate that per capita income will rise from about \$13,345 in 1993 to about \$17,380 (real 1987 dollars) by the year 2015. At least on the surface, it would appear that with greater rates of pay, the cost burden may ease, increasing the affordability of housing.

Statewide, population will continue to rise, placing continued pressure on the housing market. Population is expected to increase from about 839,000 in 1993 to about 882,410 in 2000, and to 972,540 by 2015, a higher rate of increase than anticipated last year. Furthermore, household formation will rise by over 89,160, with the steepest rises occurring within the 1993 through 1999 period, a 16 percent rise over last year's projection. Diagram 37, portrays the household forecast. As seen, another 26,750 housing units must come into the market within the next five years to meet the demand. If some parts of the population receive higher wages, prices will tend to follow demand. Those individuals without higher paying job skills will continue to face worsening housing affordability problems.

⁵⁷ The Montana Department of Commerce, Housing Assistance Bureau, can provide additional data pertaining to each county in the state of Montana and may be contacted by calling (406) 444-2804. Historic data, comprising the years 1969 through 1992, are from the U.S. Department of Commerce, Bureau of Economic Analysis, Regional Economic Information System. The most recent two years of this data is revised annually, with new benchmarks every five years; 1993 was a benchmark year and all data in this report reflect changes since data released in the FY94-98 CHAS. Forecast data was purchased from the National Planning Association Data Services, Washington, D.C. (NPA), and reprinted with their permission. This is their April 1994 forecast, with 1993 an estimated value. Short term data has changed, however, long term trends are still evident.

2. ANTICIPATED CHANGES IN HOUSING NEED

Montana does not see new types of housing needs arising over the forecast horizon. The needs addressed in previous Comprehensive Housing Affordability Strategy (CHAS) documents remain. However, the degree of need for those who are unable to ride the anticipated economic upswing will fall increasingly into housing stock that may have environmental hazards, may be unsuitable for adverse weather conditions, may be overcrowded, or have other substandard or unsuitability problems.

Current economic and housing market conditions favor middle to upper income households, where the purchase of single-family homes is strong and construction activity is good. Low- and very low-income households are experiencing the lower quality housing, are more crowded in their homes, face greater chances of having lead-based paint hazards, and see significant affordability problems. Market conditions are impeding the formation of affordable home ownership opportunities and are not generating sufficient rental housing to alleviate problems faced by renters. Low-income large families face overcrowding a majority of the time in several local communities. The needs of these low income groups remain unmet.

While short-term employment and population forecasts predict some slowdown in job growth, releasing some pressure on the housing market, current affordability problems will persist or worsen for both first-time homebuyers and low income renters, especially larger, low-income families into the foreseeable future.

Without significant market intervention, the direction of the housing market may pass by current in-need groups. These groups will therefore continue to go without affordable housing and may face increasingly difficult, overcrowded, unsuitable, or hazardous housing conditions. Economic theory suggests that market intervention actions that produce additional affordable home ownership opportunities or increase the supply of affordable priced rental properties will dampen the rising degree of need for affordable housing in the state.

Overall, Montana's affordable housing shortage, comprising some 25,000 units, is not expected to ease in the near future.

V. PRIORITY NEEDS, OBJECTIVES, AND STRATEGIES

Analysis of community needs, whether homelessness, infrastructure, economic development, or housing has been articulated, refined, and enunciated rather clearly over the years. Each of these needs has been embodied in the implementation of the state housing and community development programs. The program guidelines recognize that the degree of need in the state is far larger than available resources can address.

Consequently, program implementation for HOME and CDBG is based on a competitive ranking process, with prospective projects competing for a limited resource pool. The competitive ranking of projects has been demonstrated to be the most workable solution for the State of Montana. Needs articulated within the Consolidated Plan are simply the sum of a fast array of needs identified by local communities. These needs fall into several categories: homelessness, affordable housing, and nonhousing which includes infrastructure and economic development).

Following is a listing of the priority needs and the strategies and actions to meet those needs over a five year period.

HOUSING PRIORITY NEEDS

A. LONG TERM HOMELESSNESS PRIORITY NEEDS

All homeless program resources and proposed activities will be provided equitably throughout the state, to the extent possible, and according to public guidelines set forth by local, state, and federal agencies. CPS Table 2(a), below, presents quantitative measures of anticipated homeless needs in Montana over the five-year planning horizon. Unfortunately, resources available for these needs are woefully limited. Therefore, Montana will blend its homelessness activities within an overall context of an Anti-Poverty Program and a range of services for assisting the homeless.

STRATEGIC ACTION DISCUSSION

OBJECTIVE: FURTHER THE PREVENTION OF HOMELESSNESS

Homelessness continues to grow. With several areas experiencing very high rates of unemployment and continuing low wage rates, and some industries experiencing difficult or adverse economic conditions, homelessness may continue to threaten many Montana citizens. Actions need to be taken to prevent others from becoming homeless.

CPS TABLE 2(a)
HOMELESS PRIORITY NEEDS SUMMARY TABLE
STATE OF MONTANA FIVE YEAR PLAN - 1995 - 1999

PRIORITY HOMELESS NEEDS	Priority Need Level High, Medium, Low, No such need			ESTIMATED DOLLARS NEEDED TO ADDRESS	ANTICIPATED DOLLARS AVAILABLE TO ADDRESS IN FY 1996
Assessment/Outreach	Families	Individuals	Persons w/ Special Needs		
	M	M	M	2,099,000	
Emergency Shelter	Families	Individuals	Persons w/ Special Needs		
	M	M	M	2,099,000	
Transitional Housing	Families	Individuals	Persons w/ Special Needs		
	M	M	M	2,099,000	
Permanent Supportive Housing	Families	Individuals	Persons w/ Special Needs		
	M	M	M	2,099,000	
Permanent Housing	Families	Individuals	Persons w/ Special Needs		
	M	M	M	2,099,000	
TOTAL PRIORITY HOMELESS NEEDS	M	M	M	\$10,495,000	\$380,000

B. LONG TERM AFFORDABLE HOUSING PRIORITY NEEDS

1. CLASSIFICATION OF MONTANA'S HOUSING REQUIREMENTS

Housing needs across Montana vary widely. Extreme diversity in available housing, age of housing stock, and overall range in population density complicate assessments of degree and type of need. There is a broad array of housing availability, affordability, and suitability problems across Montana. Simply treating the symptoms will not be sufficient to solve the problems. Resources are not adequate to deal with all housing needs and requirements plaguing the state.

Difficulties are becoming more structural for low-income households and families and have spread to nearly all income groups, except the wealthy. Regardless of the overwhelming demand for affordable housing, Montana will be implementing programs and delivering services to in-need populations around the state, attempting to continue a process that minimizes the state's housing problems. The general goals are to:

- Expand the supply of decent and affordable housing, particularly rental housing, for low- and very low-income Montanans. This includes making existing rental housing affordable through tenant-based rental assistance.

- Strengthen the abilities of state and local governments to design and implement strategies for achieving adequate supplies of decent, affordable housing for all Montanans.
- Provide both financial and technical assistance to local government and nonprofit entities, including the development of model programs for affordable low-income housing.
- Extend and strengthen partnerships among all levels of government and the private sector, including for-profit and nonprofit organizations, in the production and operation of affordable housing.

With these broad-based goals in mind, Montana anticipates supporting any and all programs that address housing needs throughout the state. These needs can be classed as four categorical difficulties -- availability, affordability, accessibility, and suitability -- as reviewed below.

a. INSUFFICIENT HOUSING AVAILABILITY

Lack of available housing is a problem that requires resolution; little is available for low- and moderate-income Montanans in most parts of the state. If housing is available, it tends to be of substandard quality. Since the 1990 Census, Montana's major cities have experienced a dramatic increase in population that is driving up the demand for housing; prices are following demand accordingly; statewide, the population has risen 7 percent, with some local areas experiencing far greater increases.

In cities such as Kalispell, Missoula, Bozeman, Helena, and Billings, in-migration is often comprised of higher income persons who are in a better position to purchase land and buildings than many current state residents. Of those Montanans who can afford housing, many resign themselves to acquiring lower-quality shelter due to the encroaching housing shortage. Low-income Montanans lose housing options. People fear becoming homeless because they can no longer afford housing in their area, whether rented or owned. The homes currently being constructed are the more expensive, up-scale homes. Little, if any, construction activity has created affordable priced homes and rental property in the last several years. Section 8 waiting lists administered by the state contain 8,200 families.

b. ABSENCE OF HOUSING AFFORDABILITY

Housing affordability varies widely around the state, but is typically more severe in the urbanized areas. Rural and sparsely populated regions of Montana tend to experience dual problems with housing shortages and poor housing quality. Because of the tight market and general lack of home building, prices for both houses and rental units have risen sharply.

There is a large gap between what the market is supplying and what people can afford. Some Section 8 landlords are simply leaving the program in favor of the private rental market, which provides wider profit margins, citing HUD limitations on rent increases (.4% per year) and the lower FMRs in the vouchers and certificates as the reason for the switch.

c. INADEQUATE HOUSING SUITABILITY

A major problem pertains to the structural and physical integrity of the housing stock. Many people who live in their own homes do not have incomes high enough to maintain them. Physical deficiencies are of great concern in many housing units across the state. A portion of the housing stock is 100 years old and built on stone or timber foundations. Many structures also tend to have old, inadequate electrical wiring and gas vented chimneys used for wood stoves. Most older homes are poorly insulated. Particularly troubling for the large stock of Montana's older homes is the prospective risk of lead-based paint hazards. Nearly two-thirds of Montana's housing stock could be affected; low-income renters are at greatest risk.

Lack of return on investment is a major problem for landlords of housing units that need rehabilitation. Landlords do not want to lose their present tenants, but are also reluctant to borrow money and incur debt when they cannot afford to evict tenants or raise the rents to meet the increased debt service.

d. LACK OF HOUSING ACCESSIBILITY

Under the Americans with Disabilities Act, housing accessibility has become a visible need across the state. Accessibility is a problem unless a unit is specifically built for people with disabilities. Modifications are often difficult and expensive, and must be completely removed when the tenant leaves (according to the ADA). Most people with disabilities cannot afford to do this, and landlords do not want the inconvenience or cost of constant remodeling.

2. OBJECTIVES TO ENHANCING THE PROVISION OF AFFORDABLE HOUSING

While all housing difficulties fall into one (or more) of the four problem areas described above, the exact circumstances faced by Montana's communities are as diverse and widespread as the state's geography. A combination of population in-migration, intrastate migration, and an economy undergoing structural change has had a dire effect on Montana's housing situation. Since the 1990 Census was taken, the cost of housing has risen dramatically; available, affordable housing for the very low-income, low-income, and moderate-income population has disappeared in many areas of the state. In other parts of the state, existing vacant housing needs maintenance, causing an overall decline in the suitability and quality of housing. No single prescriptive approach to solving Montana's housing problems is applicable on a statewide level. Therefore, Montana's statewide strategy is designed to fully encompass the four problem areas and is comprised of many interlocking pieces. These pieces are listed below, with each summarized immediately thereafter.

- Relieve the shortage of available housing stock;
- Increase the stock of rental units, especially assisted units;
- Promote capital formation to build an adequate number of affordable housing units;
- Increase the ability of low- and moderate-income households to buy homes;
- Increase resources to finance housing maintenance and improvements;
- Simplify housing assistance programs;
- Work to ensure fair housing compliance, especially enhancing the understanding of fair housing laws;
- Assist in securing adequate resources to meet the needs of persons requiring supportive and transitional services that help them acquire permanent housing;
- Increase accessibility of Montana's housing stock for the disabled;
- Increase energy efficiency of Montana's low-income housing stock;
- Secure funding for testing and abatement of lead-based paint hazards

- Assist in further preventing homelessness;
- Assist in securing additional funding and resources to increase capacity and counseling services for runaway youth, and
- Increase ability of MDOC to respond to requests for technical assistance.

OBJECTIVE: RELIEVE SHORTAGE OF AVAILABLE HOUSING STOCK

There is a lack of housing in Montana. The problem is especially severe for the low- and moderate-income population, particularly in the western portion of the state and the more urban areas. The long-term and newly poor, the elderly, disabled, families, and young singles all face a lack of affordable housing and shelter. A large need appears to be for low- and moderate-income families. This demand has been met with little corresponding increase in housing stock (or rather, suitable housing stock) in the state, with the exception of newly constructed "high-end" housing.

Vacancy rates statewide average from 3 percent in some of the rural areas to zero in many urban areas, with long waiting lists the norm. Because of the shortage of all types of housing, landlords can rent their units for much higher prices. The level of demand caused by people moving into Montana from other states tends to push prices beyond the means of the low-income population. The deinstitutionalization of mentally disabled people, an increasing number of elderly people who can no longer maintain their own homes, and low-income people displaced by those who can afford to pay higher rents are exacerbating the problem.

Housing officials surveyed statewide have expressed the opinion that developers have no incentive to build the kinds of housing needed to ease the housing problem in Montana. There is inadequate return on a builder's investment in low-income housing and a lack of zoned space for multifamily dwellings. There is also a shortage of land subdivided and ready to build on, and a severe lack of mobile home spaces.

ACTIONS

New construction of affordable to low- and moderate-income houses must be initiated. Montana needs multifamily dwellings and additional public housing. Rehabilitation programs to keep existing stock from deteriorating and MDOC maintenance programs to help the elderly must be continued. State-funded housing programs need to continue expanding to help build housing and provide state matches for federal programs. MDOC intends to facilitate a cooperative effort among lenders, local housing authorities, and service organizations to develop cohesive packages to compete for housing program funds. Incentives to builders will be examined. Programs such as the Low Income Housing Tax Credit Program and the Single Family and Multifamily Bond programs will be further encouraged.

OBJECTIVE: INCREASE STOCK OF RENTAL UNITS, ESPECIALLY ASSISTED UNITS

Public Housing Authorities (PHAs) in Montana have not been able to keep up with the demand for affordable, rental housing for low-income persons. Waiting lists in the major cities are extremely long, especially for families. State-administered Section 8 waiting list is anticipated to jump to 10,000

people within the next two years. Every administrator of Section 8 subsidies in the state reports growing waiting lists for family housing.

ACTIONS

More affordable multifamily rental housing must be created. MDOC will work to facilitate rental housing programs that are directed toward the development of new units and rehabilitation of existing unsuitable units.

OBJECTIVE: PROMOTE CAPITAL FORMATION TO BUILD AFFORDABLE HOUSING

There has been little new affordable housing construction or rehabilitation of existing affordable housing units in recent years. HUD noted in its June 1991 report entitled *A HUD Perspective of Montana* that a portion of this problem relates to capital scarcity:

There is little new development of apartments in the state. Refinancing of existing projects is also slow because of low market value and constrictive underwriting requirements for available programs. Importation of capital into Montana via conventional sources is scarce. Local lenders shy away from lending on government projects because of their size and the lenders' lack of knowledge about HUD programs.

Further, the 1986 Federal Tax Reform Act eliminated a number of investment incentives including the provisions effecting capital gains exclusions, accelerated depreciation and passive income issues. For example, the investment tax credit for the rehabilitation of older buildings for income purposes including multifamily housing has been severely impacted. The Montana State Historic Preservation Office, which manages the program, notes that the number of projects has diminished sharply since 1986.

Often real estate development financing is derived through the use of limited partnerships. The investment incentives for limited partnerships were all but eliminated through provisions in the 1986 Act. This has resulted in the development of fewer multifamily units aimed at benefiting low-income Montanans. According to the Montana Building Industry Association, the loss of federal tax incentives associated with multifamily construction in 1986 is now resulting in a serious rental housing shortage in a number of Montana jurisdictions.

Some areas of the state cited higher "outside" costs as a contributing factor to the lack of development of multifamily units. These include infrastructure development, service hook-ups, and compliance with various local land use regulations. However, all agreed that the overriding issue has been the loss of important federal incentives that guarantee an adequate rate of return for the development of multifamily housing.

In many areas, especially those where there is a high demand for all types of rental housing (college communities, tourism communities, and communities that offer regional medical and social services), housing officials noted that fair market rents under the Section 8 program were too low to be of interest to private developers.

The FY 1995 lowering of HUD Fair Market Rents (FMRs) is making this situation worse. The change by HUD in FY 1995 to have FMRs reflect 40th percentile rent rather than the current 45th percentile rent compounds this problem.

ACTIONS

Since the U.S. Congress made the Low Income Housing Tax Credit permanent, MDOC is in a better position to provide information to investors for the purposes of helping them to develop affordable housing.

Also, recent legislation (SB 215) passed by the Montana legislature allows a county or municipality to donate tax deed land to nonprofit corporations for the construction of affordable residential housing. These resources must now be located and encouraged for the development of affordable housing units. Private developers need to be assured of an adequate return on their investment.

OBJECTIVE: INCREASE ABILITY OF LOW- AND MODERATE-INCOME HOUSEHOLDS TO BUY HOMES

Many low-income families currently living in rental housing would like to move into a home. The monthly mortgage payment may be lower than rental costs in a nonsubsidized unit, but many people lack sufficient funds for the down payment and closing costs. A second complication relates to the type of housing selected by the lower income household. In order to qualify for participation in various programs (e.g., Montana Board of Housing, FHA, VA) the house itself must be qualified. Some of the available housing is too high-priced to qualify for Board of Housing or federal programs. Buyers are having difficulty finding a qualified house that they can afford.

ACTIONS

The recently established HOME Program is providing new sources of funds to assist first-time homebuyers in securing affordable housing. MDOC will continue to efficiently administer this program.

OBJECTIVE: INCREASE RESOURCES TO FINANCE HOUSING MAINTENANCE AND IMPROVEMENTS

Funding is limited for improvements to homes and rental units, especially for elderly persons, persons who require special modifications for disabled access, those experiencing high energy costs, and for people living in homes that are in violation of building codes. This violates Montana's policy of securing a suitable housing stock.

ACTIONS

Homeowners, renters, and landlords need education programs that teach them how to recognize seemingly small problems that need attention and how to repair them. Many lack proper understanding of available programs such as the Board of Housing's Reverse Annuity Mortgage Program. This program allows senior citizens to tap into their home equity to secure resources for maintenance.⁵⁸ Long-term housing rehabilitation loan funds could be made available through other avenues as well. All these should be made available to low-income households.

The state could identify programs to assist elderly persons who wish to stay in their own homes, including community projects that employ persons to make needed repairs. CDBG funds may be used to leverage private dollars to establish revolving loan/grant funds. Under such a program, public

⁵⁸ Unfortunately, there appears to be some reluctance on the part of the elderly to complete their applications in the Reverse Annuity Mortgage Program. The reasons for this are not entirely clear, but there appears to be some correlation of incomplete applications and descendants living relatively nearby.

and private funds could be made available to senior homeowners for repairs. As with the Reverse Annuity Program, the loan would be repaid when the house was sold.

OBJECTIVE: SIMPLIFY HOUSING ASSISTANCE PROGRAMS

Paperwork and documentation requirements for federal housing assistance programs are complex, detailed, and stringent, and personnel available for such activities are very limited. Perceptions are that rules, regulations, and available funds are too program-specific and difficult to properly target. Due to federal laws and requirements, most housing programs are run as separate, categorical programs with no comprehensive mechanism to combine programs to fit client's varied needs.

ACTIONS

MDOC will encourage agencies to coordinate program implementation efforts and pool their resources. The MDOC Housing Information Clearinghouse will include all active programs in the state and federal government, all housing assistance facilities, and will include contact names and program descriptions. This process will encourage a single-source information data base that Montanans may access upon request.

MDOC will continue working to provide simpler program access and administrative procedures for the housing programs it administers. The CPS process is intended to bring federal, state, and local governments together with citizens and the private sector to help develop a coordinated state housing plan. MDOC will also work toward a consistent and comprehensive planning process that helps to eliminate the wide number of housing options.

OBJECTIVE: WORK TO ENSURE FAIR HOUSING COMPLIANCE

With rental units full and tenants experiencing difficulty locating suitable housing, it has become easier to discriminate against the poor, the physically disabled, the mentally disabled, Native Americans, the elderly, and other minority groups. The State of Montana has taken measures to educate the public on fair housing and to enforce fair housing practices.

ACTIONS

The State believes that education and enforcement are necessary in order to achieve and maintain fair housing practices. The Montana CDBG and HOME Programs both require grantees to certify in their applications that they will affirmatively further fair housing and administer programs and activities relating to housing and community development in a manner that affirmatively promotes fair housing. HOME Program grantees utilize procedures designed to attract eligible persons from all racial, ethnic and gender groups to the available housing. These procedures must include methods for informing the public, owners, and potential tenants which will incorporate the use of Equal Housing Opportunity logotype and slogans in press releases and other communications, and specific efforts to inform and solicit applications from persons not likely to apply for the housing without special outreach.

CDBG and HOME grantees send representatives to a two day administration workshop, where employees from each Program spend time addressing fair housing and other civil rights requirements. CDBG and HOME grantees receive an Administration Manual, with one chapter of the manual dedicated to fair housing and civil rights topics. All HOME and CDBG grantees are monitored on-site by MDOC for fair housing compliance. Monitoring requirements are specified in the HOME and CDBG Monitoring Guides. During these reviews, outreach actions and tenant selections procedures are closely scrutinized. No fair housing complaints or violations were reported or discovered during this past year. MDOC also checked with the Montana Human Rights Commission⁵⁹, and found no evidence of fair housing cases involving HOME and CDBG activities.

HOME and CDBG grantees have targeted housing activities toward groups that are more likely to face fair housing discrimination. CDBG grants are used to rehabilitate low- and moderate-income senior citizens residences, and to make improvements to or create new senior citizens living centers. HOME grantees have focused housing activities on unwed pregnant teenagers, homeless or at-risk of being homeless families, females with children who are victims of domestic violence, the physically disabled, the mentally disabled, large families, and the elderly. These assisted individuals and families have incomes ranging from no-income to low-income. One third of all project funds have been used to assist families with incomes at or below 30% of area median income. Despite the tendency for discrimination to occur more frequently with low-income persons, these low-income "special needs" groups have benefited from outreach and targeting activities completed by HOME and CDBG grantees.

Fair housing education and enforcement includes the activities of the Section Eight Program. The Montana Landlord and Tenant Act, along with applicable portions of the Montana Code Annotated relating to illegal housing discrimination, was recently printed and distributed to 3,500 families receiving Section Eight assistance and 2,000 participating landlords. In addition, HUD's booklet on Housing Discrimination (including a complaint form) was ordered and mailed to all Section Eight participants. As additional efforts are made to educate citizens, it is anticipated fair housing discrimination complaints will also increase.

The Montana Human Rights Commission continued its enforcement and education activities. The Commission received 152 cases of alleged discrimination involving housing during FY 1995. From these cases, 44% were based on familial status, 22% were based on race (American Indian), 22% were based on a disability, and 15% on marital status. The Commission received a record number of new complaints (of all types), and also closed a record number cases. In its FY95 Annual Report⁶⁰, the Commission comments that it "...completed a special project to investigate patterns of lending and real estate practice discrimination against American Indians in January 1995. The project was funded by a grant from the U.S. Department of Housing and Urban Development. The Commission found that the Indians are denied home loans at more that three times the denial rate for non-Indians, and that a number of obstacles seem to deter financial institutions from making loans on reservations."⁶¹ Discriminatory practices still exist, and the Commission is actively prosecuting cases.

⁵⁹ October 18, 1995 phone conversation with Jerry Keck, Human Rights Commission

⁶⁰ Montana Human Rights Commission FY95 Annual Report Available from the Department of Labor and Industries, Human Rights Commission.

⁶¹ Investigating Systemic Discrimination Against American Indians, Final Report, December 1994.

In addition, the Commission recently provided fair housing training to training to MDOC Section Eight employees and housing authority representatives from across the State.

The Council For Concerned Citizens, a private fair housing group, was awarded approximately \$750,000 in federal grants to operate offices in Montana and North Dakota. Approximately \$500,000 will fund fair housing compliance testing in five Montana communities, a part-time consulting attorney and an Education Outreach program to all seven Indian Reservations in Montana.

Education and enforcement actions will continue. The CDBG, HOME and Section Eight Programs will continue outreach and interaction efforts with communities across the State. Organizations such as the Council For Concerned Citizens concentrate education efforts mainly on Montana's larger communities. These collective efforts will continue in the future. The Montana Human Rights Commission will continue enforcement actions in those cases where fair housing non-compliance is identified.

OBJECTIVE: SECURE ADEQUATE RESOURCES FOR PERSONS REQUIRING SUPPORTIVE AND TRANSITIONAL SERVICES

Homeless individuals and families and persons with disabilities require supportive services in conjunction with the provision of affordable housing. In particular, those persons with non-mobility-related disabilities often require extensive special services, particularly those who are chronically homeless, chemically dependent, or mentally disabled.

ACTIONS

Preventive measures to allow people to remain in their homes are desirable. Funds for short-term payment of mortgages until families find new employment could significantly reduce the number of homeless persons. As with other types of rental housing, incentives must be expanded to attract private dollars for the construction of additional transitional housing units.

OBJECTIVE: INCREASE ACCESSIBILITY IN THE HOUSING STOCK

Accessibility is a critical issue for many persons. For the disabled, it means that the unit is not physically set up to address their specific needs, such as the lack of a ramp or the halls are narrow. Accessible housing must be developed for disabled persons. The development of capital resources is required to assist homeowners and rental unit managers in the rehabilitation of existing units in order to provide accessibility to the physically disabled. Both remedial and compensatory projects that accommodate the accessibility costs for property managers, landlords, and homeowners with disabilities are needed. Further, disabled renters need more assistance in rental deposits so that once units are available, initial occupancy costs are not as prohibitive.

For others, accessibility in the housing stock refers to its proximity to the stores, transportation, job opportunities, and services necessary for daily living. Limiting mobile homes and other affordable housing units to areas outside of cities and towns further hobbles persons who have low incomes, imposing greater transportation costs.

ACTIONS

Work to promote accessible housing. Utilize the Disabled Accessible Affordable Homeownership Program initiated July 1, 1993, by the Montana Board of Housing. Encourage and support all applications for Section 811 funds. For accessibility to goods, services, and jobs, take into account nearness to the downtown corridor when granting development funds. Also, analysis and modification of zoning restrictions should consider how those restrictions may affect accessibility of housing.

OBJECTIVE: INCREASE ENERGY EFFICIENCY IN THE HOUSING STOCK

Given the high cost of heating in Montana, it has been suggested that greater emphasis be placed on the energy efficiency of rental units to ensure lower utility costs for tenants. Multifamily projects that contain innovative heating and cooling systems emphasizing conservation could be given preference.

ACTIONS

Expand the use of weatherization funds to cover multifamily rental units. Promote long-term solutions to the energy efficiency problem through programs similar to the pilot Energy Efficient Affordable New Home Program sponsored by the Department of Natural Resources and Conservation and the Board of Housing. Lobby for a larger percentage of LIEAP funds to be applicable to the weatherization of low-income homes and apartments.

OBJECTIVE: DECREASE HOUSING ENVIRONMENTAL HAZARDS

A major environmental hazard affecting housing across the country is lead-based paint. One can compute an estimate of the number of housing units at risk for containing lead-based paint. According to HUD estimates, 90 percent of units built before 1940, 80 percent of those built between 1940 and 1959, and 62 percent of units built from 1960 to 1979 may have lead-based paint. This computation was applied to all units (occupied and vacant) in Montana. There are over 220,000 units statewide that are potentially at risk for lead-based paint hazards. Additional risk factors for lead-based paint hazards are tenure (rent or own) and income of the household.

Of those units built before 1940, 25.4 percent are occupied by very low-income renters. Older rental units have higher rates of lead poisoning hazards than do pre-1940 owner-occupied units. Of all very low- and low-income renter households, about 58,019 are estimated to have lead-based paint. For very low- and low-income owner-occupied households, 73,690 are estimated to have lead-based paint. This is not an indication of the number of households with a lead-based paint hazard; it is merely an indication of those most at risk. The findings of the initial Superfund-related study by the Butte-Silver Bow Health Department, when applied to the state, indicate that approximately 8,500 children in Montana may currently be at risk of lead poisoning.

Montana programs related to control of lead-based paint hazards are in their infancy at the present time. Only two lead programs are currently functioning. East Helena has a lead program that is relatively small, screening approximately 50 children annually in the East Helena area only (funded

by ASARCO.) The Butte Childhood Lead Poisoning Prevention Program is a comprehensive program funded by the Atlantic Richfield Corporation (ARCO). The Butte program is part of the Butte-Silver Bow County Health Department. Funds are used to support staff positions, screening activities, lab support, and environmental investigations. The Montana Childhood Lead Poisoning Prevention Program, much of which is contracted out to the Butte Childhood Lead Poisoning Prevention Program, has expanded the testing of children to Great Falls and Missoula. Funding has come from a federal program under the Center for Disease Control. The Montana Department of Health and Environmental Science (MDHES) has begun the process of initiating a lead compliance program to address the accreditation of individuals engaged in lead hazard identification or reduction activities, the accreditation of training programs for these individuals, and the certification of contractors engaged in lead based paint related activities.

ACTIONS

The Montana Childhood Lead Poisoning Prevention Program has created local programs in communities with the highest at-risk population: Great Falls and Missoula. The program should continue, and incorporate other major cities not served, accessing rural areas through the urban programs. Work should continue well on securing funding from HUD for abatement activities under the proposed Lead Abatement Program.

In addition, the Occupational and Radiological Health Bureau in the State Department of Health and Environmental Science should complete their proposed program to certify training courses for workers, supervisors, and inspectors of lead-based paint evaluation sites.

OBJECTIVE: INCREASE ABILITY OF MDOC TO PROVIDE TECHNICAL ASSISTANCE

Housing needs across the state of Montana vary widely. The extreme diversity in available housing, age of housing stock, and overall range in population density complicate the assessment of the type and degree of housing needs. There is a broad array of housing availability, affordability, and suitability problems. The state believes that simply treating the symptoms of the malady will not be sufficient to solve the problems. Resources do not appear to be adequate to deal with the housing needs and requirements that plague the state. Also, the needs identified and prioritized at the state level may not retain a similar priority rating for implementation at local levels. The statewide priority classification described herein represents only a general indicator of anticipated applications; actual application activity by local jurisdictions may be different, as the identification and quantification of needs at the local level is incumbent upon the local community.

Therefore, each local entity must be able to evaluate its needs carefully, articulate them well, present a plan to acquire program resources, and compete with other jurisdictions applying for the same scarce funds. Those organizations with the best planned and articulated applications receive funding within a competitive arena.

ACTIONS

MDOC will expand its provision of technical assistance to local governments and other entities for the purpose of helping them evaluate and qualify for housing programs under its control and

influence. Half of one staff person's time will continue to be committed to intergovernmental cooperation and application workshops. The role of the state will expand in regard to the provision and interpretation of information that can aid localities in determining and quantifying their housing needs, problems, and alternative solutions to those problems. The State's technical support includes the recent completion of an economic and demographic databook and selected data tabulations from surveys completed during the previous year. The databook is composed of employment and income by one-digit SIC, along with sex and age cohort data, and household formation over the period 1967 through 2015. Additionally, in late 1995 or early 1996 the CDBG program will make available technical assistance grants to local governments to address their community development needs.

3. QUANTIFY AFFORDABLE HOUSING NEEDS

Montana has identified that the state has an affordable housing shortage of at least 25,000 housing units. This would require new construction or conversion from other non-housing uses of property. For the purpose of estimating resource needs, it is assumed that the average housing cost, a blend of single family and multifamily units, each in turn a blend of very small to modest homes, will average a cost of 48,000 per unit.⁶² This cost per unit, and the number of affordable units needed, totals to a \$1.2 billion investment. Conversely, the number of low income households that face severe cost burdens comprise about 85,000 of Montana's over 300,000 households. If one assumes that assistance or rehabilitation of homeowner property will eliminate these cost burdens, an average cost of \$15,000 per unit is reasonable.⁶³ Together, these values add to an additional \$1.277 billion in necessary housing investments. Lead based paint abatement expense, and residential unit overcrowding costs, while very important to the State of Montana, are not yet included in the above estimates.

⁶² The housing affordability data presented earlier in this document notes that the current average cost of a two-bedroom single-family home was in excess of \$70,000.

⁶³ The CDBG housing portion of its funding programs currently plans that \$15,000 is about the average cost of rehabilitation of residential property.

CPS TABLE 2(a)
HOUSING PRIORITY NEEDS SUMMARY TABLE
STATE OF MONTANA - FIVE YEAR PLAN 1995 - 1999

PRIORITY HOUSING NEEDS (households)		Priority Need Level High, Medium, Low, No such need			ESTIMATED UNITS	ESTIMATED DOLLARS NEEDED TO ADDRESS (IN MILLIONS)	ANTICIPATED DOLLARS AVAILABLE TO ADDRESS IN FISCAL 1996 (IN MILLIONS)

TOTAL PRIORITY HOUSING NEEDS		M	M	M	125,279	\$2,697.5	\$5.24

4. GEOGRAPHIC DISTRIBUTION AND IMPLEMENTATION

Housing needs across Montana vary widely. The extreme diversity in available housing, age of housing stock, and overall range in population density complicate the assessment of the type and degree of housing needs. There is a broad array of housing availability, affordability, accessibility, and suitability problems. The State believes that simply treating the symptoms of the malady will not be sufficient to solve the problems. Current resources do not appear to be adequate to deal with the housing needs and requirements that plague the state.

The needs identified and prioritized at the state level may not retain a similar priority V rating for implementation at local levels. The statewide priority classification described herein represents only a general indicator of anticipated applications; actual application activity by local jurisdictions may be different, as the identification and quantification of needs at the local level is incumbent upon the local community.

Montana intends to implement its plan statewide (except for the entitlement areas of Billings and Great Falls and various jurisdictions guided by tribal agencies), and distribute housing funds under its direct control in a competitive process founded on needs identified at the local level. This means that each local entity must evaluate its needs carefully, articulate them well, present a plan to acquire program resources, and compete with other jurisdictions applying for the same scarce funds. Montana does not have sufficient resources to fulfill all requests for funding, or to address all problems at the same time. Those organizations with the best planned and articulated applications receive funding within a competitive arena. Generally, CDBG funds will be spent in nonentitlement areas and HOME Program funds administered by MDOC will be available statewide (excluding the cities of Billings and Great Falls).

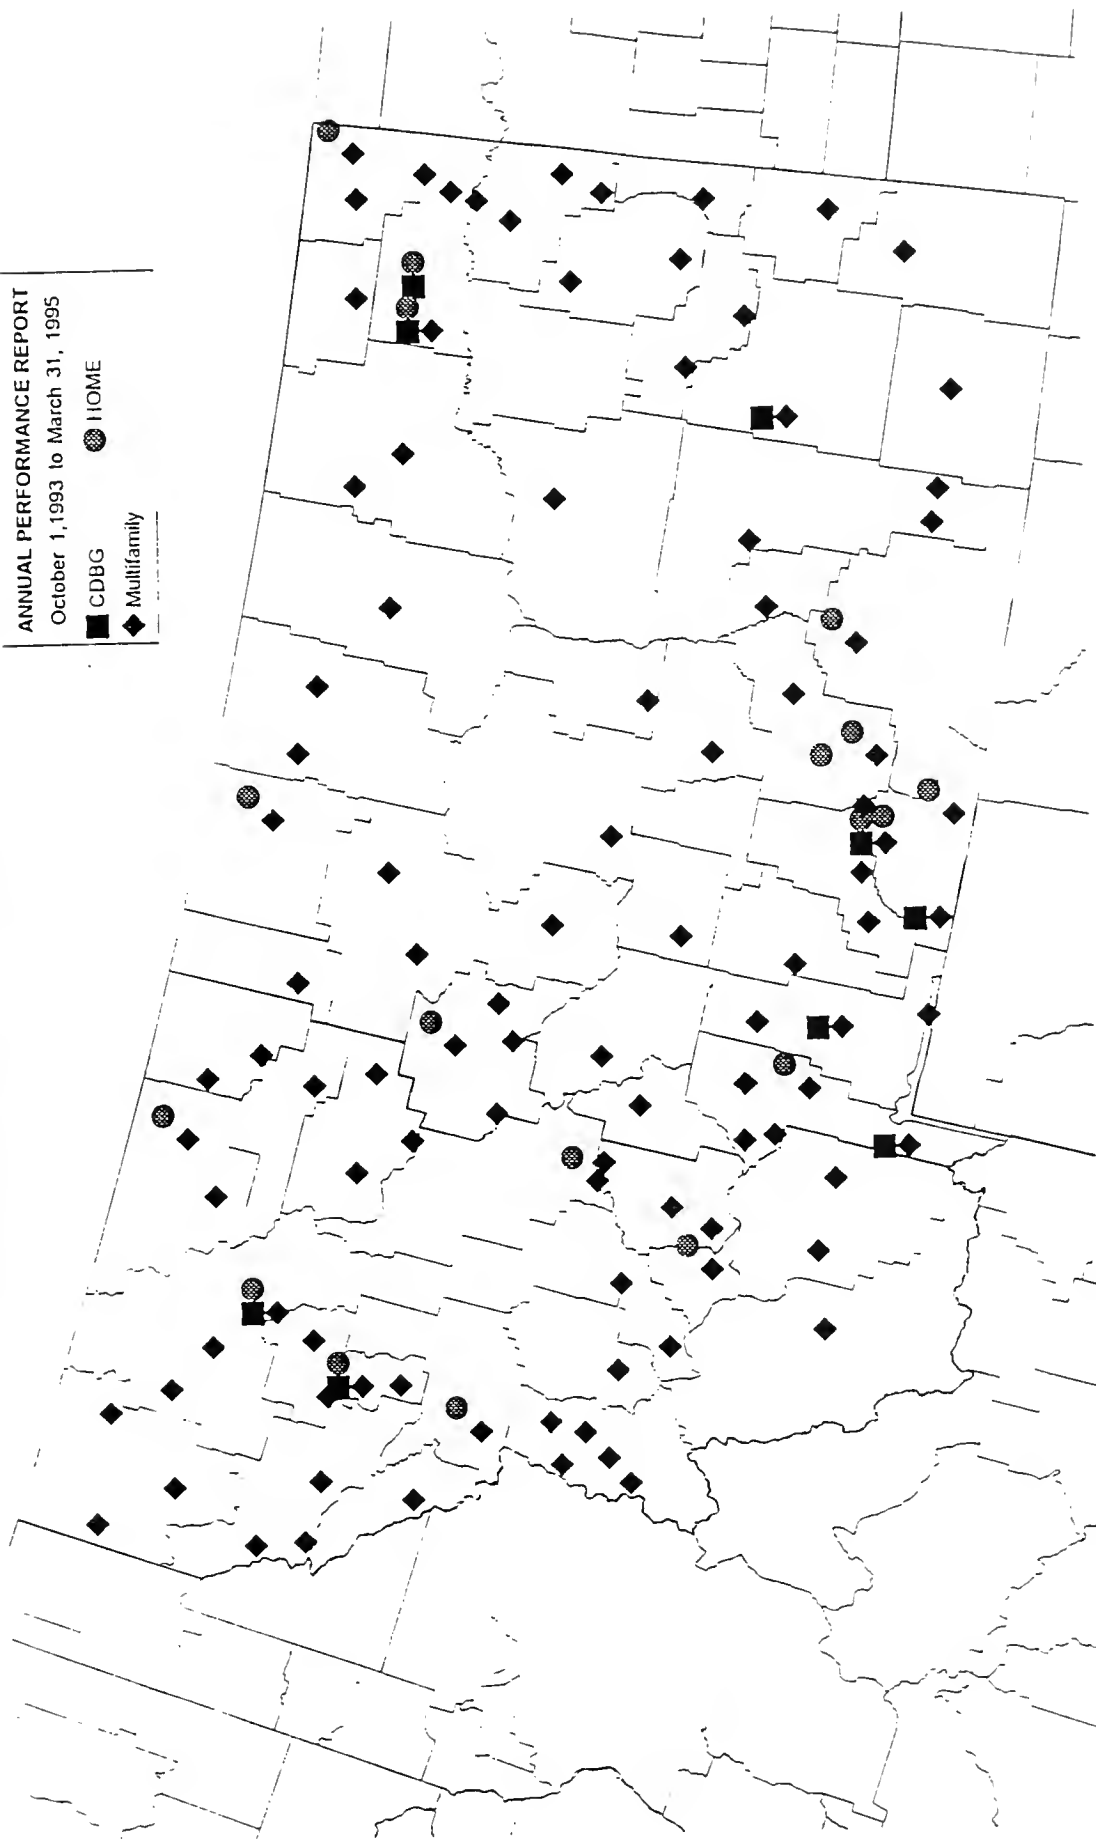

Historically, MDOC programs have been implemented on a statewide competitive basis; further, entities receiving CDBG or HOME funds must have previous allocations drawn down (50 percent for CDBG and 75 percent for HOME) before they are eligible to apply for additional program funds. This method has been shown to disburse funds equitably throughout the state, allowing all groups an equal chance to apply for funds. Therefore, program activities associated with entitlement areas, nonentitlement metro areas, and rural areas are all represented in this housing plan.

Together, all funding methods, whether formula or competitive, tend to be widely disbursed throughout the state. Furthermore, when included with other program activities not administered by MDOC, the distribution becomes widespread and broadly dispersed throughout the state. Maps 1 through 3 present a geographic picture of the distribution of federally supported housing programs and services delivered in the state over the past year. It is anticipated that similar distributions will occur in the upcoming year.

V. PRIORITY NEEDS, OBJECTIVES, STRATEGIES (cont.)

C. NON-HOUSING COMMUNITY DEVELOPMENT NEEDS

All non-housing community development needs directly addressed by the CPS pertain to projects and activities potentially eligible for funding through the Community Development Block Grant Program (CDBG). For the purposes herein, the CDBG program funds housing, (mentioned above), infrastructure, and economic development. The latter two are discussed below.

1. PRIORITY INFRASTRUCTURE NEEDS

Montana is faced with a difficult battle to solve the large and looming infrastructure problems within its boundaries. Recent analysis and inventory of infrastructure needs of local government managed facilities show an estimated \$1.6 billion dollars required to perform major improvements or construction. In a large state with a small population, the per capita cost of maintaining infrastructure systems is extremely high. It is obvious that State resources are inadequate to address the problem. Even with the recent trend of families moving back into the state, the per capita cost of maintaining infrastructure systems is extremely high.

State Departments and agencies will examine the results of the recent infrastructure inventory and analysis. Identification of the resources available to address the needs will be identified. CPS Table 2(c), presents the estimated needs for all non-housing community development needs.

OBJECTIVE:

A key objective of MDOC's consolidated planning process is to update the 1984 Governor's Task Force on Infrastructure Report and the 1991 MDOC study to provide a current picture of Montana's infrastructure needs.

ACTIONS:

MDOC has retained the services of a consultant to conduct a statewide infrastructure needs inventory and analyze the information. The results of this effort are presented in this consolidated plan update.

2. PRIORITY ECONOMIC DEVELOPMENT NEEDS

The economic development needs are based on the studies and conclusions described in the economic development needs section of the Consolidated Plan. For more explanation of the context of these recommendations, please refer to that section. The state consolidated planning process allows for local communities to identify their own needs. When local governments apply to the CDBG program for funding public facility or economic development projects, the applicant must prepare a needs assessment which recognizes the applicant's project as a community need. The following objectives are written to provide maximum flexibility to local communities across the state who have identified their own economic development needs.

OBJECTIVE:

The Montana Department of Commerce's Economic Development Division administers the Economic Development component of the Community Development Block Grant Program. The mission of the Economic Development Division is to assist the businesses and communities of Montana to achieve prosperity while keeping in mind that the vision of prosperity to be achieved must be defined by the businesses and communities that the Division serves. The CDBG program is one component of the implementation of this mission.

ACTIONS

The CDBG Economic Development Program works in concert with many Division programs: Regional Development, Microbusiness Finance, Job Investment Loan Program, Business Location and Recruitment, International Trade, Small Business Development Center, Montana Science and Technology Alliance, and the Board of Investments loan programs. The Regional Development Officers offer individual consulting in business planning and financial analysis, loan packaging, state and federal funding sources, business tax incentives, and referrals to other technical assistance sources. These programs will continue to work with businesses to:

1. Encourage viable economic development projects that promote investment of private capital, expansion of local tax bases, and creation of permanent, year-round jobs principally for low and moderate-income Montanans.
2. Encourage projects that will involve basic economic activities, including manufacturing, import substitution activities, or the distribution of Montana-made goods.
3. Encourage projects that involve the processing, refining, and marketing of Montana's natural resources.
4. Continue to expend the annual CDBG ED allocation and access other sources of funds for maximum financial leverage.

D. INSTITUTIONAL STRUCTURE

Most state-administered housing assistance, public facility, and economic development programs are handled by the Montana Department of Commerce (MDOC), primarily within the Local Government Assistance Division and the newly formed Housing Division. In November of 1994, the State Housing Task Force recommended centralization of housing programs within state government to increase coordination and assist in the development of a cohesive state housing policy to guide the operation of all housing programs in Montana. The Department of Commerce formed a Housing Division which includes the Board of Housing and its programs, the Section 8 program and the HOME Investment Partnerships program (HOME). As lead agency, the Housing Division will continue to develop the Consolidated Plan, and manage and coordinate its many related housing programs. The Local Government Assistance Division will continue to manage their CDBG programs for housing and public facilities. The Division will also continue to administer the CDBG Economic Development program. Together the Divisions will continue to promote the interaction and coordination of entities involved in providing the services identified under these programs. The Emergency Shelter Grant Program is administered by the Intergovernmental Human Services Bureau of the Department of Social and Rehabilitation Services.

To facilitate coordination and cohesive housing policy setting and planning, the Department of Commerce is forming a Housing Coordinating Team. The team will consist of representatives from all state and federal entities that currently have housing programs. The purpose of the Team will be to provide a forum for ongoing discussion regarding current housing programs, program policies, and planning for changes in programs. One of the positive aspects of organizations such as this would

be discussing project applications which may be requesting access to multiple sources of funds, and discuss projects where an entity may not be able to provide funding but another entity may.

An avenue the State continues to explore is coordination with the private sector. Many banks, savings and loans, and other financial organizations involved in housing are interested in taking advantage of federally assisted housing improvement programs in order to meet requirements of the federal Community Reinvestment Act (CRA). Two federally assisted programs are the Montana CDBG and HOME programs. Both Community Housing Development Organizations (CHDOs) and local governments can apply for HOME funds to assist in providing additional affordable housing. Local governments apply for CDBG funds to use for housing projects involving the rehabilitation of homes owned or rented by low- or moderate-income families and other activities to improve the neighborhood in which the housing rehabilitation is taking place. CDBG and HOME funds have played a key role in "leveraging," using program allocations to attract private dollars by creating a pool of funds for rehabilitation loans at below market interest rates.

MDOC will continue communicating and coordinating activities with other agencies throughout the year. These actions can assist in identifying areas in which further communication and cooperation may be needed, and can help to identify gaps in the institutional provision of services. Actions have included application workshops for CDBG and HOME, information and data dissemination regarding the Community Reinvestment Act, advice to nonprofit entities on how to become certified as CHDOs, support for other entities in their application processes for funding of various programs, and joint work on evaluation of homeless subpopulations. Furthermore, MDOC intends to work closely with SRS in their newest efforts in the study of the unsheltered homeless.

MDOC recognizes that housing policy and housing program responsibilities are often fragmented across a variety of agencies and organizational entities throughout both the state and federal governments. To aid in resolving these complications, MDOC supports the use of a team approach. The "team" is comprised of government and citizen participants to aid in directing and solving housing problems facing the state. MDOC will support continuation of such an entity for the State's housing policy formation and development of broader-based constituencies for researching and analyzing housing problems.

The state has been able to collect some data pertaining to the size and needs of nonhomeless population with special needs. However, much of the information is general in nature. MDOC supports the prospective participation of individuals representing the interests of the developmentally disabled, persons in correctional institutions, and other nonhomeless persons with special needs. A survey of the five regional mental health centers was conducted to determine the number of permanent rental units specifically set aside for persons with severe and disabling mental illness.

The Community Reinvestment Act (CRA) has stimulated the involvement of for-profit organizations in the provision of affordable housing. One example of CRA's work is the Community Home Ownership Program of Norwest Bank. Ten million dollars has been allocated by Norwest Banks in Montana and Wyoming to be used for home mortgage loans. The loans are available to people in Norwest Bank-designated market areas in Montana for purchasing single-family, owner-occupied residential units. The bank's program provides a low down payment, no discount points, low loan origination fees, and competitive interest rates on home mortgage loans. Loans are available

only to families earning no more than 115 percent of the HUD-determined median income for the area, up to \$30,000. These benefits help make home ownership possible for some low- and moderate-income Montanans.

E. COORDINATION EFFORTS

Many banks, savings and loans, and other financial organizations involved in housing are interested in taking advantage of federally assisted housing improvement programs in order to meet the requirements of the federal Community Reinvestment Act (CRA). Two such federal programs available in Montana are the CDBG and HOME programs. Community Housing Development Organizations (CHDOs) and local governments can apply for HOME funds to assist in providing additional affordable housing. Local governments apply for CDBG funds to use for housing projects involving the rehabilitation of homes owned or rented by low- or moderate-income families and other activities to improve the neighborhood in which the housing rehabilitation is taking place. CDBG funds have played a key role in "leveraging," using CDBG dollars to attract private dollars by creating a pool of funds for rehabilitation loans at below market interest rates.

MDOC also has been communicating and coordinating activities with other agencies throughout the entire year. This assists in the identification of areas for which further communication and cooperation may be needed, and helps to identify gaps in the institutional provision of services. Activities have included application workshops for CDBG and HOME funding, information and data dissemination regarding the Community Reinvestment Act, technical assistance workshops and publications, advice to nonprofit agencies and prospective nonprofit entities on how to become certified as CHDOs, support for other entities in their applications for funding,⁶⁴ and joint evaluation with SRS of the unsheltered homeless population.

F. QUANTITATIVE MEASURES FOR FISCAL 1996

Because the size of Montana needs are so vastly different than available resources, the State will commit all allotted funds each year for the HOME and CDBG programs. Commitments will be in accordance with the application guidelines established for each of the program components. The guidelines are reviewed and updated each year. Copies of program guidelines are available upon request from the MDOC.

In accordance with the statutory guidelines, estimated number of housing units to be assisted with the HOME, ESG, and CDBG funds is presented in CPS Tables A, B, and C.

⁶⁴ For example, the Community Development Bureau assisted the City of Kalispell in forming an alliance with the Federal Home Loan Bank of Seattle. The bureau's role was to emphasize the strength that the program had throughout the state and MDOC.

CPS TABLE A
HOUSING PRIORITY NEEDS SUMMARY TABLE
STATE OF MONTANA - FISCAL 1996

VI. STATE CERTIFICATIONS

In accordance with the applicable statutes and the regulations governing the consolidated plan regulations, the State certifies that:

Affirmatively Further Fair Housing -- The State will affirmatively further fair housing, which means it will conduct an analysis of impediments to fair housing choice within the state, take appropriate actions to overcome the effects of any impediments identified through that analysis, and maintain records reflecting that analysis and actions in this regard.

Anti-displacement and Relocation Plan -- It will comply with the acquisition and relocation requirements of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended, and implementing regulations at 49 CFR 24; and it has in effect and is following a residential antidisplacement and relocation assistance plan required under section 104(d) of the Housing and Community Development Act of 1974, as amended, in connection with any activity assisted with funding under the CDBG or HOME programs.

Drug Free Workplace -- It will or will continue to provide a drug-free workplace by:

1. Publishing a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the grantee's workplace and specifying the actions that will be taken against employees for violation of such prohibition;
2. Establishing an ongoing drug-free awareness program to inform employees about -
 - (a) The dangers of drug abuse in the workplace;
 - (b) The grantee's policy of maintaining a drug-free workplace;
 - (c) Any available drug counseling, rehabilitation, and employee assistance programs; and
 - (d) The penalties that may be imposed upon employees for drug abuse violations occurring in the workplace;
3. Making it a requirement that each employee to be engaged in the performance of the grant be given a copy of the statement required by paragraph 1;
4. Notifying the employee in the statement required by paragraph 1 that, as a condition of employment under the grant, the employee will -
 - (a) Abide by the terms of the statement; and
 - (b) Notify the employer in writing of his or her conviction for a violation of a criminal drug statute occurring in the workplace no later than five calendar days after such conviction;
5. Notifying the agency in writing, within ten calendar days after receiving notice under subparagraph 4(b) from an employee or otherwise receiving actual notice of such conviction. Employers of convicted employees must provide notice, including position title, to every grant officer or other designee on whose grant activity the convicted employee was working, unless the Federal agency has designated a central point for the receipt of such notices. Notice shall include the identification number(s) of each affected grant;
6. Taking one of the following actions, within 30 calendar days of receiving notice under subparagraph 4(b), with respect to any employee who is so convicted -
 - (a) Taking appropriate personnel action against such an employee, up to and including termination, consistent with the requirements of the Rehabilitation Act of 1973, as amended; or

7. Making a good faith effort to continue to maintain a drug-free workplace through implementation of paragraphs 1, 2, 3, 4, 5 and 6.

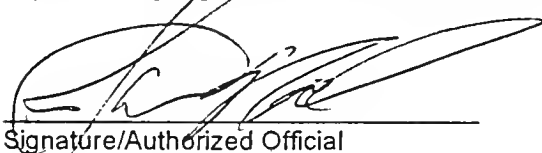

Anti-Lobbying – To the best of the State's knowledge and belief:

1. No Federal appropriated funds have been paid or will be paid, by or on behalf of it, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement;
2. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, it will complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions; and
3. It will require that the language of paragraphs 1 and 2 of this certification be included in the award documents for all subawards at all tiers (including subcontracts, subgrants, and contracts under grants, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

Authority of State – The submission of the consolidated plan is authorized under State law and the State possesses the legal authority to carry out the programs under the consolidated plan for which it is seeking funding, in accordance with applicable HUD regulations.

Consistency with plan – The housing activities to be undertaken with CDBG, HOME, ESG, and HOPWA funds are consistent with the strategic plan.

Section 3 – It will comply with section 3 of the Housing and Urban Development Act of 1968, and implementing regulations at 24 CFR Part 135.

Signature/Authorized Official

Title

Specific CDBG Certifications

The State certifies that:

Citizen Participation -- It is in full compliance and following a detailed citizen participation plan that satisfies the requirements of 24 CFR §91.115 and each unit of general local government that receives assistance from the State is or will be following a detailed citizen participation plan that satisfies the requirements of 24 CFR §570.486.

Consultation with Local Governments -- It has or will comply with the following:

1. It has consulted with affected units of local government in the nonentitlement area of the State in determining the method of distribution of funding;
2. It engages in or will engage in planning for community development activities;
3. It provides or will provide technical assistance to units of local government in connection with community development programs; and
4. It will not refuse to distribute funds to any unit of general local government on the basis of the particular eligible activity selected by the unit of general local government to meet its community development needs, except that a State is not prevented from establishing priorities in distributing funding on the basis of the activities selected.

Local Needs Identification -- It will require each unit of general local government to be funded to identify its community development and housing needs, including the needs of low-income and moderate-income families, and the activities to be undertaken to meet these needs.

Community Development Plan -- Its consolidated housing and community development plan identifies community development and housing needs and specifies both short-term and long-term community development objectives that have been developed in accordance with the primary objectives of Title I of the Housing and Community Development Act of 1974, as amended. (See 24 CFR 570.2 and 24 CFR part 570)

Use of Funds -- It has complied with the following criteria:

1. Maximum Feasible Priority. With respect to activities expected to be assisted with CDBG funds, it certifies that it has developed its Action Plan so as to give maximum feasible priority to activities which benefit low and moderate income families or aid in the prevention or elimination of slums or blight. The Action Plan may also include activities which the grantee certifies are designed to meet other community development needs having a particular urgency because existing conditions pose a serious and immediate threat to the health or welfare of the community, and other financial resources are not available);
2. Overall Benefit. The aggregate use of CDBG funds including section 108 guaranteed loans during program year(s) 1990, through 1995 shall principally benefit persons of low and moderate income in a manner that ensures that at least 70 percent of the amount is expended for activities that benefit such persons during the designated period;
3. Special Assessments. The state will require units of general local government that receive CDBG funds to certify to the following:

It will not attempt to recover any capital costs of public improvements assisted with CDBG funds including Section 108 loan guaranteed funds by assessing any amount against properties owned and occupied by persons of low and moderate income, including any fee charged or assessment made as a condition of obtaining access to such public improvements.

However, if CDBG funds are used to pay the proportion of a fee or assessment that relates to the capital costs of public improvements (assisted in part with CDBG funds) financed from other revenue sources, an assessment or charge may be made against the property with respect to the public improvements financed by a source other than CDBG funds.

It will not attempt to recover any capital costs of public improvements assisted with CDBG funds, including Section 108, unless CDBG funds are used to pay the proportion of fee or assessment attributable to the capital costs of public improvements financed from other revenue sources. In this case, an assessment or charge may be made against the property with respect to the public improvements financed by a source other than CDBG funds. Also, in the case of properties owned and occupied by moderate-income (not low-income) families, an assessment or charge may be made against the property for public improvements financed by a source other than CDBG funds if the jurisdiction certifies that it lacks CDBG funds to cover the assessment.

Excessive Force -- It will require units of general local government that receive CDBG funds to certify that they have adopted and are enforcing:

1. A policy prohibiting the use of excessive force by law enforcement agencies within its jurisdiction against any individuals engaged in non-violent civil rights demonstrations; and
2. A policy of enforcing applicable State and local laws against physically barring entrance to or exit from a facility or location which is the subject of such non-violent civil rights demonstrations within its jurisdiction;

Compliance With Anti-discrimination laws -- The grant will be conducted and administered in conformity with title VI of the Civil Rights Act of 1964 (42 USC 2000d), the Fair Housing Act (42 USC 3601-3619), and implementing regulations.

Compliance with Laws -- It will comply with applicable laws.

Signature/Authorized Official

Title

Specific HOME Certifications

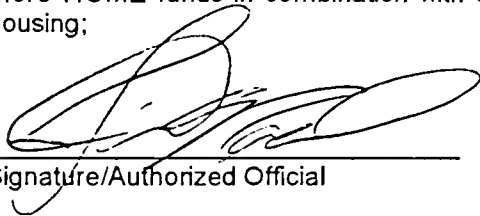

The State certifies that:

Tenant Based Rental Assistance -- If it intends to provide tenant-based rental assistance:

The use of HOME funds for tenant-based rental assistance is an essential element of the State's consolidated plan.

Eligible Activities and Costs -- It is using and will use HOME funds for eligible activities and costs, as described in 24 CFR § 92.205 through §92.209 and that it is not using and will not use HOME funds for prohibited activities, as described in §92.214.

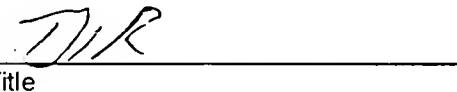

Appropriate Financial Assistance -- Before committing any funds to a project, the State or its recipients will evaluate the project in accordance with the guidelines that it adopts for this purpose and will not invest any more HOME funds in combination with other Federal assistance than is necessary to provide affordable housing;

Signature/Authorized Official

ESG Certifications

The State seeking funds under the Emergency Shelter Program (ESG) certifies that it will ensure that its recipients of ESG funds comply with the following requirements:

Major rehabilitation/conversion – In the case of major rehabilitation or conversion, it will maintain any building for which assistance is used under the ESG program as a shelter for homeless individuals and families for at least 10 years. If the rehabilitation is not major, the recipient will maintain any building for which assistance is used under the ESG program as a shelter for homeless individuals and families for at least 3 years.

Essential Services – Where the assistance involves essential services or maintenance, operation, insurance, utilities and furnishings, it will provide services or shelter to homeless individuals and families for the period during which the ESG assistance is provided, without regard to a particular site or structure as long as the same general population is served.

Renovation – Any renovation carried out with ESG assistance shall be sufficient to ensure that the building involved is safe and sanitary.

Supportive Services – It will assist homeless individuals in obtaining appropriate supportive services, including permanent housing, medical and mental health treatment, counseling, supervision, and other services essential for achieving independent living, and other Federal State, local, and private assistance for such individuals.

Matching Funds – It will obtain matching amounts required under 24 CFR §576.71.

Confidentiality – It will develop and implement procedures to ensure the confidentiality of records pertaining to any individual provided family violence prevention or treatment services under any project assisted under the ESG program, including protection against the release of the address or location of any family violence shelter project except with the written authorization of the person responsible for the operation of that shelter.

Homeless Persons Involvement – To the maximum extent practicable, it will involve, through employment, volunteer services, or otherwise, homeless individuals and families in constructing, renovating, maintaining, and operating facilities assisted under this program, in providing services assisted through this program, and in providing services for occupants of such facilities.

Consolidated Plan – It is following a current HUD-approved Consolidated Plan or CHAS.

APPENDIX TO CERTIFICATIONS

INSTRUCTIONS CONCERNING LOBBYING AND DRUG-FREE WORKPLACE REQUIREMENTS:

A. Lobbying Certification

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than \$10,000 and not more than \$100,000 for each such failure.

B. Drug-Free Workplace Certification

1. By signing and/or submitting this application or grant agreement, the grantee is providing the certification.
2. The certification is a material representation of fact upon which reliance is placed when the agency awards the grant. If it is later determined that the grantee knowingly rendered a false certification, or otherwise violates the requirements of the Drug-Free Workplace Act, HUD, in addition to any other remedies available to the Federal Government, may take action authorized under the Drug-Free Workplace Act.
3. For grantees other than individuals, Alternate I applies. (This is the information to which jurisdictions certify).
4. For grantees who are individuals, Alternate II applies. (Not applicable jurisdictions.)
5. Workplaces under grants, for grantees other than individuals, need not be identified on the certification. If known, they may be identified in the grant application. If the grantee does not identify the workplaces at the time of application, or upon award, if there is no application, the grantee must keep the identity of the workplace(s) on file in its office and make the information available for Federal inspection. Failure to identify all known workplaces constitutes a violation of the grantee's drug-free workplace requirements.
6. Workplace identifications must include the actual address of buildings (or parts of buildings) or other sites where work under the grant takes place. Categorical descriptions may be used (e.g., all vehicles of a mass transit authority or State highway department while in operation, State employees in each local unemployment office, performers in concert halls or radio stations).
7. If the workplace identified to the agency changes during the performance of the grant, the grantee shall inform the agency of the change(s), if it previously identified the workplaces in question (see paragraph five).
8. The grantee may insert in the space provided below the site(s) for the performance of work done in connection with the specific grant:

Place of Performance (Street address, city, county, state, zip code)

<u>1424 9th Avenue, Helena, Lewis and Clark County, MT 59620</u>	836

Check ___ if there are workplaces on file that are not identified here; The certification with regard to the drug-free workplace required by 24 CFR part 24, subpart F.

9. Definitions of terms in the Nonprocurement Suspension and Debarment common rule and Drug-Free Workplace common rule apply to this certification. Grantees' attention is called, in particular, to the following definitions from these rules:

"Controlled substance" means a controlled substance in Schedules I through V of the Controlled Substances Act (21 U.S.C.812) and as further defined by regulation (21 CFR 1308.11 through 1308.15);

"Conviction" means a finding of guilt (including a plea of nolo contendere) or imposition of sentence, or both, by any judicial body charged with the responsibility to determine violations of the Federal or State criminal drug statutes;

"Criminal drug statute" means a Federal or non-Federal criminal statute involving the manufacture, distribution, dispensing, use, or possession of any controlled substance;

"Employee" means the employee of a grantee directly engaged in the performance of work under a grant, including: (i) All "direct charge" employees; (ii) all "indirect charge" employees unless their impact or involvement is insignificant to the performance of the grant; and (iii) temporary personnel and consultants who are directly engaged in the performance of work under the grant and who are on the grantee's payroll. This definition does not include workers not on the payroll of the grantee (e.g., volunteers, even if used to meet a matching requirement; consultants or independent contractors not on the grantee's payroll; or employees of subrecipients or subcontractors in covered workplaces).

VI. SUMMARY OF CITIZEN PARTICIPATION

The citizen participation process is designed to give the public an opportunity to have a voice in the way HUD programs are administered by the State. A two-phased process was implemented this year beginning with citizen input in the development of the Consolidated Plan (CP). A letter was sent to 475 local governments, public agencies, member organizations and citizens throughout Montana encouraging their participation in updating the CP. Twenty three organizations were individually contacted and encouraged to provide information and valid statistics to aid in the update process. Staff from the Local Government Assistance Division provided an opportunity for citizen input at the Montana Association of Counties convention on September 16-19, 1995 in Billings. Housing Division staff presented information regarding updating the CP at the League of Cities & Towns convention on October 6, 1995 (also in Billings). In each of these cases, public input on the development of the plan was received. The Water, Wastewater, Solid Waste, Action Coordination Team previously met and provided input concerning the infrastructure survey and analysis that is included in the CP. A public information hearing was held on October 10, 1995 in Bozeman for the express purpose of receiving public input prior to the release of the draft CP. This meeting was held in the evening to allow individuals to attend without taking time from work.

The draft CP was released to the public in November 1995. Newspaper notices provided a summarized content and purpose of the plan and contained a representative list of places where the full document was available for review as well as dates, locations and times of the scheduled public review meetings. A draft CP and cover letter were sent to all public libraries in the state. Libraries located in larger towns received several copies to allow for at least one copy to be checked out. Additionally, 240 letters were sent to interested parties on the CP mailing list that gave the same information referenced above in the newspaper notices. The *Executive Summary* was also sent to 1,144 individuals and organizations.

Three public review meetings were held throughout the state. The first, held December 5 in Polson, was attended by eleven people. The second public review meeting was held in Lewistown on December 7 with sixteen people attending that meeting. The third public meeting was held in Forsyth on a cold, snowy December 12. One person provided input and comment.

Following is a summary of oral and written comments received by MDOC on the draft CP, broken down into appropriate categories. Tapes of the public hearings and written comments are on file in the office of the Consolidated Plan Coordinator, Montana Department of Commerce, 836 Front Street, Helena, MT.

COMMENTS AND RESPONSES (public hearings and written comments)

Comment: Support for funding of intermediate care facility An intermediate care facility provides affordable housing to elderly people who can no longer live by themselves in their own homes but are not yet in need of the wide array of services provided in a rest home. These facilities are being targeted for smaller towns and allow individuals to continue to live more independently within their own community in small units that fit into residential areas. The intermediate care facilities have professional support to help give medicine and provide healthy meals and are a cost effective alternative to moving into a rest home.

Response: *An intermediate care facility would be an eligible project under the HOME program identified as transitional housing. Individuals were informed of the HOME application process and eligible applicants. These facilities are also eligible under the CDBG program.*

Comment: **Reorganization and leveraging of funds for projects** Due to the reorganization of several federally funded programs one person wanted to know how to leverage funds to create new projects

Response: *Both HOME and CDBG programs encourage the use of several funding sources to build more comprehensive projects. Federal dollars have become severely limited and a partnership approach to leverage various federal, state, private, not-for-profit, and city and county public resources, is currently used to finance several major projects.*

Comment: **Support for changes in the HOME application process** One person commented that his organization found the HOME application very straightforward and easy to understand. He would like to see format changes in the CDBG application. Another person also supported the idea of streamlined applications.

Response: *Steps are being taken to move towards a standard and possibly combined Board of Housing (BOH), CDBG and HOME application in the future. The result will probably be a simplified application format with a boilerplate section that includes data germane to all programs, and other areas to answer specific HOME, CDBG and BOH questions.*

Comment: **Continued Certification of Community Housing Development Organizations (CHDO)** One person asked how the state was going to encourage efforts to establish Community Housing Development Organizations in Montana as well a continued certification.

Response: *HOME program personnel continue to contact housing organizations interested in becoming CHDO's and help them meet the established criteria for certification. Through education, application workshops and working on an individual basis, the HOME program has already certified 20 non-profit organizations as CHDO's. On a yearly basis each CHDO must become recertified to continue to be eligible to apply for the fifteen percent set aside for CHDO funding under the HOME program.*

Comment: **Acceptance of Program Income as an eligible form of match** One person expressed support for program income generated from rental projects as an acceptable form of match for future applications. She questioned if that ruling extended to moneys recaptured from housing rehabilitation projects.

Response: *Housing rehabilitation projects are attached to a period of affordability requirement enforced by deed restrictions on the property. The recaptured funds that are generated from the sale of a rehabilitation project, within the period of affordability, are subject to use under a Program Income Plan that has been previously reviewed and accepted. The plan for program income should include a list of eligible projects to create additional housing for low and very-low income persons within a project area.*

Comment: Support for the maximum HOME grant allocation of \$400,000 There were two oral comments in support of the maximum HOME allocation of \$400,000. Concern was expressed however, that the amount should not go lower than \$400,000. Housing projects are considered "big ticket" expenditures. Project costs are high and the amount provided through the grant process should remain substantial enough to warrant the numerous federal regulations that accompany the funding. A lower grant amount with the rationale to give more communities an opportunity to share the funds is better than having 2-3 larger communities consume the majority of the funding.

Response: *The allocation was increased to \$500,000 maximum funding for a single grant for the FFY 1995 in expectation that the HOME funding allocation would increase up to approximately \$4 million. This did not occur and the HOME program is currently forecasting for FFY 1996 the same level of funding as FFY 1995. It appears after looking at the results of the FFY 1995 competition that \$400,000 is a sufficient amount to gap finance the majority of proposals that compete for HOME funds. One of the goals of the HOME program is to make the funds geographically available to as many grantees as possible, lowering the grant ceiling would help distribute funds to one more grantee.*

Comment: Progression of combining HOME & CDBG programs One oral question was asked regarding the recommendation made by the State Housing Task Force in 1994 to consolidate all housing programs operated by the Department of Commerce.

Response: *The Department of Commerce responded to the State Housing Task Force by forming a Housing Division within the Department. This Division includes the Board of Housing and its programs, the Section 8 program and the HOME Investment Partnerships program. The formation of the Division occurred July 1, 1995 and is expected to increase coordination and assist in the development of a cohesive state housing policy to guide the operation of all housing programs in Montana. HUD and Congress have explored the possibility of a direct Block Grant to states for housing related activities, however, at present no determination has been made.*

Comment: Support for CDBG Technical Assistance Grants The Community Development Block Grant program was given a public and formal thank you for the technical assistance given to Human Resources Development Council, District VI, in Lewistown.

Response: *Under federal law, 1% of the annual CDBG allocation, or approximately \$100,000 may be used to provide technical assistance to local governments and non-profit program sub-recipients. A maximum funding of up to \$10,000 is available with priority given to local governments which have not received CDBG funding in the past. The grants must be used for activities related to the development of subsequent applications for projects to address community housing or public facility needs. Local governments must provide a 50-50 cash match which must be firmly committed by the time CDBG funds are released. Some flexibility is given regarding what qualifies as match documentation.*

Comment: Exception to the Fair Housing Non-Compliance section of the Draft Action Plan in the form of content and word choice Two persons provided written comments that the Fair Housing Section of the AP "showed incredible lack of insight regarding the magnitude of the problem as it exists in our state" and provided an incorrect and misleading impression that illegal housing

discrimination was not a problem in the state. Concern was expressed that ".....the numbers of complaints filed is not an indication of the actual numbers and/or extent of housing discrimination." The word choice "perception" and "suggests" was faulted stating that use of these words "...infer that fair housing non-compliance may or may not be occurring." Also, "The study done for the Analysis of Impedimentsmissed the boat by focusing on income, instead of the protected classes..." "Focusing on income detracts from the purpose of the Analysis of Impediments, ignores the magnitude of the problem of illegal housing discrimination in Montana, and fails then, to address this problem in any meaningful way."

Response: In no way does the Consolidated Plan belittle the scope of the fair housing problem or the individuals and families who have been victims of housing discrimination. The Fair Housing Non-Compliance section of the draft CP refers to the Analysis of Impediments to Fair Housing Choice which reviews the scope of the fair housing problem being experienced across the State. The Analysis includes a summary of the 1991 Montana Advisory Council on Housing Discrimination Report entitled Equal Housing Opportunity in Montana/ A Study of Housing Discrimination, prepared for the Governor and the Human Rights Commission and examines data gathered in a 1993 Montana Housing Survey conducted by the Department of Commerce. The Analysis also suggests avenues for minimizing or eliminating impediments to fair housing choice, where they exist.

The word choice "perception" was taken directly from the Analysis of Impediments to Fair Housing. MDOC has to be cautious about reaching conclusions on certain issues. Complaints or accusations of discrimination do not necessarily constitute proven actual discrimination. In recognition of this concern, the words "perception" and "suggests" will be removed and substituted with the word "alleged" in the final CP to correspond with the wording used in the 1991 Montana Human Rights Commission Report.

The study done for the Analysis did not focus on income, rather on the protected classes. The data simply showed a strong association between income and discrimination, including the categories of race, marital status, and age. The data analysis included an accurate observation. Low income families who are members of a protected class were more likely to report being discriminated against than families with higher incomes of a protected class.

In the 1993 Housing Survey, 57 of 1,224 households responding reported having experienced unfair housing treatment, nearly 5% of the households surveyed. The Analysis went on to analyze in detail those households that reported unfair housing treatment. Noting a correlation with income, the Analysis noted that out of the 52 respondents who said they had experienced discrimination, "25 or 48% were extremely low or very low income households. The second largest group of those who experienced unfair treatment were in the low income group... obviously, economic discrimination is strongly correlated with fair housing non-compliance."

In analyzing race by income, the Analysis also noted that, "this indicates that of those extremely low income households reporting discriminatory practices, nearly 1 in 5 were Native American, a far cry from the 6% of the population that Native Americans comprise." The Analysis also noted that single people are more likely to encounter unfair treatment in housing than married persons.

A portion of the Fair Housing Non-compliance section has been re-written in cooperation with the Montana Human Rights Commission. All information provided in the CP is based on confirmable analyses, studies, surveys and reports. MDOC welcomes statistically valid documentation regarding fair housing that may be incorporated in a future consolidated planning process.

Comment: Inclusion of Monitoring Programs in the Consolidated Plan One responder wrote that “The Final Plan should clearly state who conducts the monitoring and what actually occurs during the process.” “The disclosure of the monitoring program would be especially helpful to organizations and agencies who work on housing discrimination since the vast majority of these entities receive complaints and the HOME and CDBG Programs don’t.”

Response: The suggestion that the specific monitoring processes be included in the final CP indicates a lack of understanding as to the purpose and function of the CP. The goal of programs covered under the CP is to develop viable urban communities by providing decent housing and a suitable living environment and expanding economic opportunities principally for low- and moderate-income persons in the production and operation of affordable housing. The CP functions as a federal organized and required planning document which involves a participatory process, an application for federal funds under HUD’s formula grant programs, a strategy to be followed in carrying out HUD programs and a yearly action plan. Inclusion of a “monitoring program” goes beyond the requirements and purpose of the CP into actual program compliance. Information regarding program compliance is included in the Administration Manual for both the CDBG and HOME programs and includes information regarding fair housing in the Civil Rights chapter. This information is program specific and provided to successful grantees at the Grantee Workshop, and is available upon request.

Comment: Presentation of Statistical Information One responder stated that the information provided concerning the Montana Human Rights Commission should be broken down into the categories of general discrimination and housing discrimination instead of “lumped together”.

Response: MDOC did not lump the general discrimination and housing discrimination categories together regarding information provided by the Montana Human Rights Commission. Information provided in the CP was taken directly from page two of the Montana Human Rights Commission FY95 Statistics in Brief under the section entitled BASIS OF ALLEGED DISCRIMINATION - HOUSING CASES ONLY. Additionally, the CP reported the caseload summary of the highest four categories of complaints which involved Familial Status, Race - American Indian, Disability, and Marital status. Failure to understand the comment that “inclusion of this type of information in the Final Plan is imperative, in order to inform the public of the types of discrimination..” is noted because the information already provided in the plan is exactly what the responder insists be included. The difference is that percentages were used rather than simple numbers. Giving percentages provides a greater understanding of what is happening. For instance using the 44% alleged discrimination - housing cases, gives a clearer picture rather than just using the number 67 cases of alleged discrimination in the state in a one year period. The reader does not know if the number 67 was out of a sample of 200 or 200,000.

Comment: Request to hold additional Consolidated Plan, CDBG and HOME meetings
One written comment was received suggesting that four community meetings in a state the size of

Montana is not sufficient to constitute regular contact and working arrangements with community stakeholders.

Response: *The locations picked for meetings in 1995 were strategically selected taking into account driving distance from population centers, geographical position in the state, previous meeting sites, and handicapped accessible locations, among others. Limited travel budgets restrict the number of meetings held throughout the state. In addition, attendance at meetings does not necessarily reflect all contact with the public. Numerous avenues are used to provide information to the public for all programs administered. Initially, a letter was sent to 475 local governments, public agencies, member organizations and citizens throughout Montana encouraging participation in updating the CP. Twenty-three organizations were individually contacted and encouraged to provide information and valid statistics to aid in the update process. Local Government Assistance Division and Housing Division staff met with organizations and individuals to gain input on the CP. Mailings concerning changes in program regulations or activities included information and encouraged participation in updating the CP. Last year the public information hearing was held in Helena with minimal attendance. The location was moved this year and held in the evening to allow individuals to attend without taking time from work.*

At the time the draft CP was released to the public in November, 1995 notices were sent to all major newspapers with information where the draft CP was available for review. Letters were sent to 240 interested parties on the CP mailing list providing the same information. The Executive Summary was sent to 1,144 individuals and organizations.

MDOC has been very successful in making information accessible to all of Montanans. It is difficult to warrant several additional meetings when public demands for grant funding exceed the supply on a two to one ratio. Given this positive feedback, MDOC can only summarize that understandable, written material has been successfully conveyed to the public.

Comment: Inaccurate title of fair housing organization and amount of funds received

One written comment was received stating that an organization was mistakenly referred to as the "Concerned Citizen Coalition. It should state the Council for Concerned Citizens. Two comments were received stating that the \$1 million dollar enforcement grant received by the Council for Concerned Citizens was incorrect.

Response: *The title of the organization Council for Concerned Citizens will be corrected in the final document as well as the amount of funding Council for Concerned Citizens received in an enforcement grant.*
